

# universkin™ H

A supercharged hyaluronic shot

universkin™, the founder of functional dermatology and revolutionary universkin™ P serum, reinvents topical hyaluronic acid with universkin™ H - a hydrating shot active that can be used alone or integrated into your preferred daily routine to boost your skin hydration and firmness.

A unique combination of hyaluronic acid, organic silica + L-rhamnose, and a biomimetic peptide in a minimalist formula, universkin™ H amplifies skin hydration and firmness on three levels.

## REPLENISH

The serum brings you an additional 1.4% hyaluronic acid\* in two molecular weights at their optimized form. The high molecular weight acts on the surface enhance the skin barrier while the low molecular weight penetrates the surface of your skin and acts in-depth for hydration and repairment of the dermis. universkin™ H offers one of the highest concentrations of topical hyaluronic acid (especially the low molecular weight) in the market and gives your skin the ultimate hydration boost.

## REGENERATE

An exclusive 10% organic silica + L-rhamnose that will work in the dermo-epidermal junction to boost the synthesis of firmness proteins (collagen, elastin). The organic silica (Silanetriol), an essential compound in the skin that interacts with the firmness proteins, restructures the skin and normalized its metabolism. The L-rhamnose (natural sugar) helps to improve the dermal-epidermal junction structure. The result, a total improvement in skin firmness and toning.

## PRESERVE

Last but not least, universkin™ H not only helps boost and regenerate the skin hydration and firmness but also helps your skin to preserve all these important elements against the degradation. Thanks to one specific biomimetic peptide, Trifluoro Acetyl Tripeptide 2, universkin™ H can efficiently protect against the degradation of the effective proteins and create a longer-lasting result.

*\*Hyaluronic acid is a powerful natural moisturizer that helps improving skin texture and provides long-lasting hydration. In the skin, it is found mostly in the dermis, where it is synthesized by fibroblast cells. The internal production of HA begins to slow down at 25 and the phenomenon accelerates towards the age of 40. This leads to a deficit of hyaluronic acid and the installation of signs of aging.*

univers**skin**™ H is designed to be the ultimate booster for all skin types and all methods of application. It can be used alone as hydration and firmness boosting serum or be applied with other skincare products to enhance the hydration and firming effect.

Here are some of the tips and tricks universskin™ suggests:

Face Mask: Mix two pumps of nex**ultra**™ O with 4 drops of univers**skin**™ H in the palm. Apply as a mask on the clean face and leave it for 15 to 20 mins. To remove the mask, spray some thermal water on the face. Delicately massage your face with fingertips and remove the residue with tissue paper.

Ultra-hydrating treating serum: apply univers**skin**™ H before your personalized univers**skin**™ P serum while your skin is dehydrated. The univers**skin**™ H will hydrate the skin to better absorb the bespoke univers**skin**™ P serum.

Directions of use:

Any skin types. Face, eye contour, lips. Apply every day 2 to 3 drops on the face, the eye, and lips contours, the neck, and the cleavage.

To be applied after univers**skin**™ P serum and before your moisturizing cream.
