TRANSFORMING YOUR BUSINESS THROUGH NEW TECHNOLOGIES

CYBERDNA

managed network security monitoring

Powered By VIGILANT

SECURITY IS THE KNOWLEDGE THERE IS NO THREAT

VIGILANT HELPS YOU AVOID CATASTROPHE BY GIVING YOU FULL VISIBILITY TO THREATS 98 DAYS FASTER THAN THE INDUSTRY AVERAGE.

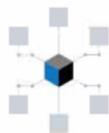

know WHEN

CyberDNA® utilizes a proprietary, distributed network of passive security sensors to capture your network data in near real time while our Vigilant Hunt Team monitors your network traffic for anomalies to pinpoint exactly when threats occur -- faster than any other solution.

know WHERE

With attacks proliferating, our platform examines the packets across your network and identifies what should and should not be there. These attack indicators allow us to immediately identify the entry point of the attack on your network and isolate the threat to your company resources and data.

know HOW

Using our patented technology, we identify the type and source of a compromise, so your team doesn't have to, thereby maximizing the response and effectiveness of remediation efforts and significantly minimizing risk and exposure for your business.

Contact us to start your no cost, no obligation trial and begin protecting your business TODAY!

FULLY CONCEALED THREAT PROTECTION ATTACKERS CAN'T TOUCH

Because our technology is 100% passive, we can conceal our identity in your infrastructure from attackers, while also being able to independently confirm the effectiveness of your existing security products. And, because our patented solution is not available to purchase off-the-shelf, attackers can't get their hands on it. In the case of many of our competitors, attackers simply purchase the exact same technology you have and adapt their methods and capabilities accordingly to steal your data.

AROUND THE CLOCK MONITORING WITH THE FASTEST DETECTION TIME

Vigilant's CyberDNA sensors continuously capture your network traffic 24/7. While most managed security providers and products only look at pockets of data, our Vigilant Hunt Team proactively monitors all your network traffic for signs and activity that signal an active compromise, misconfiguration, or other notable security risk. This approach decreases the average incident detection time from months to hours, significantly reducing the impact of a breach.

ZERO FALSE POSITIVES

Vigilant serves as an extension of YOUR team, only notifying you of verified threats and vulnerabilities. In fact, as part of our fully managed security solution we offer a zero false positive guarantee. We provide clear, easy to understand, recommended courses of action that allow you to address the issue quickly and get back to running your business.

IMMEDIATE ACCESS TO VALUABLE DATA

Vigilant's CyberDNA passive network monitoring provides an unprecedented level of visibility and insight into the health and security of your network which you have visibility to through the Vigilant Customer Portal. Through the portal you can view detailed information such as:

- ◆ What versions of software are running in your environment, and which ones are out of date or compliance
- ◆ When company policies and regulatory requirements are not being met
- ◆ Your organization's true bandwidth usage
- ◆ Violations of use policies, to include explicit content

Additionally, the Vigilant Customer Portal is your one-stop shop for managing tickets, incidents, and information, allowing you to keep your finger on the pulse of your overall security posture.

YOUR TEAM

- ◆ Come from Department of Defense, US Cyber Command, Government, and Fortune 500 Organizations
- ◆ Many team members carry secret or top-secret security clearances and are able to work on classified projects
- ◆ Many of YOUR team members built and worked on some of the largest security networks in the world
- ◆ Vigilant is one of only two managed network security companies approved by the California DOJ to work within the California law enforcement system
