

With extensive clinical medicine and sports medicine knowledge spanning more than 40 years, the Brain & Cognition Clinic's team derive from the close interaction and communication with its sister organisation, Perth Integrated Health.

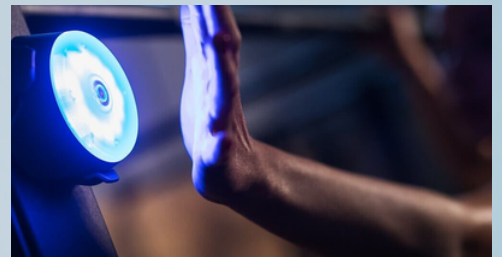

Neuro Rehabilitation In The Modern Era

Our Technologies at the Brain & Cognition Clinic have been derived from over 40 years of clinical experience where the interface of traditional hands on methods of neuromuscular and neurofacilitation is now embraced with the use of progressive technology like Blaze Pods, Reflexion and Reflexion GO Virtual Reality. Currently used around the world for sports medicine performance enhancement.

Gains can be made in the following areas

- Eye hand coordination / Tracking
- Dexterity
- Speed
- Concentration
- Mid Line and Hemisphere control
- Fine & Gross Upper Limb functionality

Apart from its obvious sports medicine performance enhancement applications, Reflexion and Blaze Pods are used in the rehabilitation medicine space for the following:

- Multiple Sclerosis, Parkinson's
- Spina Bifida
- Cerebral Vascular Accidents (CVA)
- Acquired Brain Injury (ABI)
- Severe Concussion
- Neurological injuries - Paraplegia and Tetraplegia
