E-SERVICE

ENVIRONMENTAL WATER, LTD.
WATER TREATMENT SPECIALISTS

Modernize the way you collect, analyze, and access data.

eServiceReport is an online reporting software service designed to save time and turn routine data entry into analytical & communication savings.

Time is Money

Save time when entering data by using pre-configured comments and previewing previous test results. Utilizing a digital log book streamlines data entry and our system allows for automatic emailing of reports.

Performance Comparisons

Color-coded test results make a "green is good, red is bad" concept easy to illustrate with eServiceReport's graphing tools. Create graphs or look at trends in water usage or swings in conductivity to determine problems or to document efficiency changes.

Focus on Critical Test Results

Included data analysis tools help create a paper trail for all critical test results which fall outside of established control ranges. Setup automatically-created alarms to add another layer of communication and documentation. Out of range parameters can be auto-emailed to persons requiring immediate attention.

Include Automated Data From Your Equipment

eServiceReport can receive data from compatible communications-enabled devices. PLCs can also add compatibility. You will appreciate the convenience and analysis benefits of having user-entered and device data in one location.
