

Press Release — For Immediate Release

Copenhagen / Malmö — April 28, 2026

Hymeth to relocate Swedish operations to new facility in Gothenburg

Hymeth today announced that it will relocate its Swedish operations to a new site in Gothenburg, Sweden. The move is part of the company’s planned expansion and is intended to increase operational capacity, strengthen customer support and support the company’s ramp-up plans.

The new facility will provide expanded space for manufacturing, assembly and engineering activities, enabling more efficient operations compared to the current site. The relocation creates improved conditions for scaling production volumes and supporting a growing customer base.

“The new site in Gothenburg gives us the capacity and infrastructure needed for the next phase of our growth,” said Peter Timring, COO of Hymeth *“It allows us to better support customers, improve internal workflows and execute our ramp-up plans in a structured and controlled way.”*

Gothenburg was selected due to its strong industrial ecosystem, access to skilled engineering talent and proximity to customers, partners, and suppliers. The new location is expected to support closer collaboration across teams and improve overall operational efficiency.

The relocation will take place in a phased manner to ensure continuity in operations and customer support. Existing commitments to customers will not be affected during the transition.

“In addition to increased capacity, the new facility gives us improved conditions for research and development,” said Theresa Falkendal, CTO of Hymeth. *“Bringing production, engineering and research closer together strengthens our ability to develop and industrialize new solutions in line with customer and market requirements.”*

Operations at the new Gothenburg site are expected to commence in September 2026, after which it will become the company’s primary base for Swedish activities.
