

Polyester Yarn

Made Like No Other—From Recycled Plastic Bottles

We love sustainability so much, we collect our own plastic bottles and feed them into our vertically integrated process to create REPVE recycled polyester. Use it to make almost anything sustainable, with filament, staple fiber and fiber fill products. REPVE polyester fiber can also have wicking, thermal comfort, and other performance technologies embedded in the fiber. To help take your products further.

REPVE® Our Ocean™ Making a Unique Statement

REPVE® Our Ocean™ is an option for your brand to tell an ocean-focused story, or stand specifically for the good of our oceans. Take a stronger stand in addressing a problem that is very relevant to your consumer, and build your business with a unique product statement.

REPVE Our Ocean is specially sourced from bottles at high risk of ending up in the ocean—so it deals with a root cause of ocean plastic. The bottles are collected within 50K of coastlines in countries or areas that lack formal waste or recycling systems, so your brand can play an even bigger role in solving the ocean pollution problem: developing recycling programs in areas where plastic is most at risk of entering a marine environment.
