Permanent Non-Invasive Access Solutions

Ankor-Tiles

Ankor Tiles are suitable for permanent installation into existing grass areas, soil and onto a prepared base. They give a non-invasive, cost effective solution to large scale car parking, light aircraft use, and pedestrian access.

The non-dig installation process allows grass to grow through the tiles, creating a surface that can be mowed or grazed.

The 2 tier system suppresses resurgence of mud from below and special openings ensure effective drainage.

Large ground anchors give the best possible fixing even in poor ground conditions or under heavy loads.

Planning permission is not required for this product.
