

BIOTEC

For Livestock

Tackles Waste & Blood Unlike Any Other!

- **Increases healthy bacteria**
- **Reduces overall manure**
- **Consumes slaughterhouse bloods**
- **Breaks down solids rapidly**
- **Increases oxygen/decreases odor**
- **Reduces hauling & disposal**
- **Saves time by eliminating bio-removal record keeping**
- **Eco-friendly!**
- **Saves money in so many ways!**

Every cattle farmer knows: manure is a problem. As the piles grow, the natural anaerobic bacteria levels are affected negatively, and that causes the decomposition process to slow and even stop altogether. The only option is to collect the manure in a liquid, slurry, or solid state and haul it off. And slaughterhouses have a whole other level of complications when dealing with EPA standards, which require blood cleaned with water to meet a safety rating that is burdensome. Whatever the problem, time and money are lost.

BIOTEC For Livestock is a manure and plasma digester that cleans up manure pits, cattle pens, slaughter floors, and blood collection tanks with ease. It boasts quality strains of both aerobic and anaerobic microbes. Where other products will fail to decrease the waste and biohazard levels, our product has worked wonders, digesting manure and blood with no need to store or haul as it will biodegrade along with the problem. Safe and natural, **BIOTEC** is your answer.

The anaerobic bacteria break down the bottom manure solids and brings them to the surface, where the aerobic bacteria take over to digest what remains. The bacteria will also eat the enzymes found in plasma without any effort.

BIOTEC digests waste in every way that's necessary, providing solutions for manure and slaughterhouse cleaning, waste containment, and maintenance.

It has 64 strains of microbes which were perfected over a period of decades, and the population grows from 200 to 29 million within 24 hours! Needless to say: we're able to tackle sludge problems overwhelmingly.

BIOTEC saves money by helping to eliminate excessive permits, costly treatments, manure removal and distribution, as well as excessive disinfecting used in the process of bio-removal, blood wastewater treating, the required containment or shipping, etc. This consequently benefits in dollars saved, fewer man hours needed, and a safer environment.

Call us today and let U.S. Ag Industrial make your waste problems disappear for good!
