

Tackles Waste & Blood Unlike Any Other!

- Increases healthy bacteria
- Reduces overall manure
- Consumes slaughterhouse bloods
- Breaks down solids rapidly
- Increases oxygen/decreases odor
- Reduces dredging & disposal
- Saves time by eliminating bio-removal record keeping
- Eco-friendly!
- Saves money in so many ways!

BioTec is a waste, manure, and blood digester that works! It cleans up manure pits and tanks better than anything, and it consumes the bloods from slaughter floors with ease. Waste and biohazard treatment has never been easier!

Waste build-up affects natural bacteria levels negatively, and break-down will decrease. **BioTec** combats and reverses the negative bacteria levels. Whether it's swine, cattle, poultry, etc., it works fast for all livestock waste, and it's effective.

The anaerobic bacteria break down the bottom manure solids and brings them to the surface, where the aerobic bacteria take over to digest what remains. The bacteria will also eat the enzymes found in plasma without any effort.

BioTec digests waste in every way that's necessary, providing solutions for manure and slaughterhouse cleaning, waste containment, and maintenance.

BioTec saves money by helping to eliminate excessive permits, costly treatments, manure removal and distribution, as well as excessive disinfecting used in the process of bio-removal, blood wastewater treating, the required containment or shipping, etc. This consequently benefits in fewer man hours needed, and a safer environment.

Call us today and see your livestock waste problems literally disappear!
