

BIOTEC

Tackles Waste Build-up Unlike Any Other!

- Breaks down solids rapidly
- Breaks down oils and grease found in sewer lines
- Reduces dredging and disposal
 - Increases healthy bacteria
- Saves time by eliminating bio-removal record keeping
- Increases oxygen levels/ decreases gases & odor
 - Eco-friendly!

BioTec is a waste, sewage, and grease/oil digestant that works! It cleans up septic lagoons, waste water tanks, and city sewer lines. Sludge build-up affects the natural anaerobic bacteria levels negatively, and sludge break-down decreases. **BioTec** combats and reverses the negative anaerobic levels.

The anaerobic bacteria break down the bottom sludge solids and bring them to the surface, where the aerobic bacteria take over to digest what remains. **BioTec** breaks down and digests waste in every way necessary to provide the best solution for septic cleaning, water purification, and manure maintenance.

BioTec also saves money helping to eliminate excessive permits, costly treatments, sludge removal and distribution of sludge, as well as the need for chlorine disinfectant used in the process of bio-removal, the required S.O. to kill the chlorine, etc. This consequently benefits in fewer man hours needed, and a safer environment.

Call us today and see your septic problems literally disappear!
