

BORTEC

Dissolves Build-Up, Increases Production!

As an oil well runs, its production is slowed by paraffin, clots, waxy emulsions, and even damage done by acid and other stimulation treatments. Production depletes as perforations get clogged, and then fracking is needed, which can be costly or harmful depending on the fluid elements used.

The ideal petroleum flow is possible once these problems are solved by our top-of-the-line, USDA BioPreferred surfactant called **BORTEC**! Our product is used as a wellbore cleaner, paraffin thinner, sludge breaker, oil sweetener, and solvent.

- **Loosens Paraffin**
- **Opens Up Clotted Perforations**
- **Perfect Sludge Breaker**
- **Lightens/Sweetens Crude Oil**
- **Safe & Effective Solvent**
- **Non-Toxic, Non-Polluting**
- **Non-Corrosive, No PPE Needed**
- **Restores High Oil Flow**
- **Huge Return on Investment**
- **Increases Profits**

BORTEC loosens built-up paraffin from the tubing, and it eases surface tensions in the perf zone for increased petroleum flow and substantially improved oil production. It will also dissolve the hardened emulsions found at the bottom of crude oil storage tanks and reconstitute it back into a refinable product!

When used to open wells, **BORTEC** has been found to naturally sweeten the crude oil and raise the quality. And it lowers the bacteria that lessens the quality, and it in-turn lowers hazardous H₂S. Better quality means a better sale price!

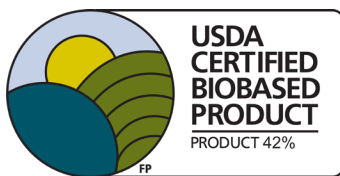

BORTEC is also the safest option to use as a solvent. When rig washing or pivot cleaning, harsh and poisonous chemicals are needed to break down the caked-on oil and wax. But **BORTEC** is more effective as a cleaner, and it's so safe to use that PPE isn't needed! Truly, **BORTEC** is the only BioPreferred, organic, and biodegradable oil surfactant on the market that works better than any other!

The colloidal technology in **BORTEC** atomizes the solids, softening and eventually biodegrading them into a biomass, which fully dissolves without residue. Our micelle package literally breaks down the obstacles molecularly, and then the oil is free to flow. Unlike most solvents or surfactants which are too expensive, corrosive, dangerous to handle, and must be recovered, **BORTEC** is non-caustic, safe to handle, noncorrosive to equipment, fully biodegradable, and requires no recovery.

Whether it's wellbore cleaning, perf unclotting, oil sweetening, sludge breaking, rig washing, or even if it's used as a fracking component, **BORTEC** is the ultimate solution for the Oil & Gas Industry.

Call us today and let **BORTEC** bring back life in your wells and increase your production profits!

Fully biodegradable, technologically sound, 100% safe!
