

Wellbore Cleaning Solution

Dissolves Build-Up, Increases Production!

- Breaks Down Paraffin
- Opens Up Closed Fissures
- Restores High Oil Flow
 - Perfect Rig Wash
- Huge Return on Investment!
- Easy to Use
- Effective & Economical
- Non-Toxic, Non-Polluting
- Improves Productivity
- Increases Profits!

As an oil well runs, its production is slowed by emulsions, paraffin, wax, and even damage done by acid and other stimulation treatments. The ideal flow is possible once these problems are solved by our top-of-the-line wellbore cleaner, **BorTec**! The flow is improved substantially, and the surface tensions in the formation are made ideal for increased flow and improved oil recovery.

Unlike most cleaners on the market that merely lift oil off a surface and redeposit it, **BorTec** will eliminate the problem altogether, completely removing it! Our micelle package literally breaks down the obstacles molecularly.

The colloidal technology anatomizes the solids and oils quickly, biodegrading them into a biomass. The emulsified oil is then dissolved further by the natural bacteria in the soil, eliminating it completely.

Is so effective that it doesn't just clean wells; it's also a quality rig wash! Say goodbye to oil spills and keep your rig clean. Call us today to learn more!
