

Bioremediation Surfactant

Dissolves Oils & Biohazards — Keeps Environment Safe

Our specialized **PLANET WASH** is a powerful, chemical-free surfactant that has the capability of replacing any of the chemical or toxic surfactants being offered today. It has almost unlimited uses when it comes to cleaning oil spills and biohazards. It is EPA-approved and fully organic. Anything from oil spills on the ocean to grease digesting in wastewater, it works the best.

PLANET WASH can be instrumental in rescuing and preserving land, sea, and animals across the globe from various in-dustrial accidents, natural catastrophes, and man-caused disasters. It will not harm animal eyes, ears, respiratory system, or skin, and is safe if accidentally ingested in small quantities.

This is a new breed of product that is 100% carcinogen free and works hand in hand with mother nature to help maintain a clean, healthy planet. Our product is colloidal micelle technology derived from organic material which molecularly breaks down the oil contaminates to nitrates, carbon dioxide, oxygen, and H₂O while at the same time biodegrading along with the biohazard.

We have been at the forefront of bringing effective clean products to market and have helped thousands of individuals and companies choose a better alternative to harmful chemical products. Call us today and let **PLANET WASH** work for you!

The uses are vast and wide thanks to the dynamic formulation of the product. **PLANET WASH** has innumerable industrial and real-world applications.

Below is a small sample of what it can be used for:

- **Water Petroleum Digestion**
- **Wildlife Cleansing**
- **Shoreline Wash**
- **Vehicle/Boat Wash**
- **Soil Remediation**
- **Tar Removal**
- **Industrial Cleaning**
- **Wastewater Treatment**
- **Grease Digestion**
