

## Bagasse Digestion At Its Best!

It is well known that bagasse continues to be a problem for the cane industry. Despite the prospective solutions that have been brought to the table through the years, the piles of bagasse continue to turn to mountains, forcing mills to tie up mill property and buy land for storage in hopes of a permanent solution.

U.S. Ag Industrial's TerraMax is the sustaining, stand-alone solution to the question: "How do we rapidly return bagasse to usable, organic matter well before the next planting season?"

TerraMax, our soil remediation product, is a game-changer for the cane industry. Our premium blend of humic acid, minerals, and a complex microbial package breaks down the fibrous husks from sugar cane and sorghum safely, effectively, and quickly. The material becomes an excellent carbon fertilizer, and this along with the minerals and microbes TerraMax provides help rebuild organic matter, putting nutrients back into the soil and cleaning it of any harmful or sterilizing elements.

If you have a bagasse problem, we have a lasting solution to save you time, money, and land space. Call us today, and let U.S. Ag Industrial turn your problem into profit.

- Breaks-down & Digests Bagasse
- Helps Decontaminate Salts & Toxins
- Converts Husks Into Carbon
- Saves Time & Money
- Re-Establishes Healthy Soil Bacteria
- Effective & Economical
- Non-Toxic, Non-Polluting
- Biological & Biodegradable
- Completely Affordable
- Heals the Environment
