

**CleanGreen®**

**Soil & Bioremediation Agent**

**Principal Functioning Agent:**

Microbes (microorganisms or bacterium in aerobic format that will transform into anaerobic depending on the substance being consumed).

**General Use Directions**

TerraMax is a concentrated complex of humic acid, fulvic acid, trace minerals, and cultured microorganisms which is used for soil and bioremediation to break down waste and blood, as well as oil, wax, and grease found in petroleum contaminated environments. It is also used to increase organic matter, restoring soil to its most fertile state.

**Recommended Application Rates**

**For Waste, Blood, and Grease:**

Apply directly on the soil at a rate of 1-3 gallons per acre. It can be applied by hand through a pump sprayer, hose attachment, or pressure washer. Microbes will digest the biohazard until it is fully consumed. Repeat as necessary until biohazard is dissolved and cleaned completely.

**For Oil Spills:**

Best used after applying CleanGreen® Planet Wash surfactant on the spill and the oil hazard is initially digested into biomass. Apply directly on the soil at a rate of 5 gallons per acre. It can be applied via plane, helicopter, pump, or pressure washer. TerraMax microbes will digest the leftover biomass until hazard consumes. Repeat as necessary until oil hazard is dissolved and cleaned completely.

**Caution: Keep out of reach of children.**

Harmful if swallowed. If ingested, consult a physician immediately. Avoid prolonged contact with skin. In case of eye contact, flush with plenty of water for at least 15 minutes. If irritation persists, consult a physician.

Gallons: \_\_\_\_\_ Net Weight: 9 lb. per gallon
