

Aqua Medical Net Zero Commitment

Our Vision for a Sustainable Future

At Aqua Medical, we recognise that climate change poses an unprecedented threat to global health, ecosystems, and prosperity. As a healthcare innovator and a responsible corporate citizen, we are committed to taking decisive action to reduce our environmental impact and contribute to a healthier planet for future generations.

Our Net Zero Pledge

Aqua Medical commits to achieving net zero greenhouse gas emissions across our operations and value chain by 2050 at the latest, with meaningful milestones along the way. This ambition aligns with the goals of the Paris Agreement to limit global warming to 1.5°C above pre-industrial levels.

Key Principles of Our Commitment

To realise this ambition, we will be guided by the following principles:

- **Science-Based Targets:**
We will establish and disclose interim science-based targets consistent with limiting warming to 1.5°C. Our targets will address Scope 1 (direct emissions), Scope 2 (purchased energy), and the most material Scope 3 (supply chain and downstream) emissions.
- **Operational Excellence and Efficiency:**
We will improve the efficiency of our facilities and processes, including reducing energy use, adopting renewable energy sources, and optimising logistics.
- **Sustainable Procurement and Product Design:**
We will work collaboratively with suppliers to reduce embedded carbon in our products and services, prioritise low-carbon materials, and innovate to design medical products with a smaller environmental footprint.
- **Circularity and Waste Reduction:**
We will champion waste reduction, reuse, and recycling initiatives, supporting a circular economy approach across our operations.
- **Transparency and Accountability:**
We will publicly report progress annually, guided by recognised frameworks such as the Greenhouse Gas Protocol and the Task Force on Climate-Related Financial Disclosures (TCFD).
- **Engagement and Advocacy:**
We will engage employees, customers, suppliers, and partners to foster a culture of sustainability and advocate for policies and practices that support the transition to a net zero economy.

Milestones

We will pursue the following milestones on our pathway to net zero:

- **2028:** Transition 100% of our electricity consumption in owned facilities to renewable sources.
- **2030:** Reduce absolute Scope 1 and 2 emissions by at least 50% from a 2020 baseline.
- **2040:** Reduce absolute Scope 3 emissions by at least 50%.
- **2050:** Achieve net zero emissions across all scopes.

Collaboration for Impact

We understand that addressing climate change requires collaboration across sectors and value chains. Aqua Medical is committed to partnering with stakeholders—including healthcare providers, suppliers, regulators, and patients—to drive innovation, share knowledge, and accelerate the decarbonisation of the healthcare industry.

Together, we can build a resilient, sustainable future where human health and planetary health thrive side by side.
