

XCDC Kneepads Care Instructions:

Machine Wash in Cold
Hand wash in Cold to Warm water

Hang to Air Dry

Use Garment Bag Provided for Machine Washing to prevent snags and premature wear, to help isolate from Velcro and Zippers during machine washing

Wash after wearing for long periods to retain elasticity by removing dirt and oils

If Impact Dots become loose they can be remedied by using diluted Fabric Glue pushed thru from outside. (Video instruction will be available soon)

Kneepads will break in after a few hours of wear.

If they ever become too loose, short duration in the dryer set to medium heat will help shrink them and tighten them up slightly.

Caution:

Using too much heat will affect the heat-activated glue on the impact pad
