

CHANGES IN TELOMERE SIZE AS A PERCENTAGE EACH YEAR FROM BIRTH

Extracted from
The Cure For Death
[The Executive Summary](#)
By David Gomadza

TELOMERE SIZES AS A PERCENTAGE PER YEAR SINCE BIRTH

1 (year) 28 32 48 66 78 2ool.start(%)
2 38 48 58 68 78 98 0ool.start(%)
3 78 68 38 33 23 38 8ool.start(%)
4 64 22 38 31 36 27 6ool.start(%)
5 66 78 23 28 33 74 2ool.start(%)

notes

no changes detected as after this because at start a lot of things use telomere to start life but soon after stops as they get everything they need now for 10 years nothing big happens to age 20 when new line production start with new old age kit this makes everything grow faster and if we start we can ask what can be then we know that everything had started

19 74 28 33 38 20 2ool.start(%)
20 32 68 74 38 22 21 18
21 33 74 66 38 33 34 31
22 66 74 68 28 32 38 2ool.start(%)
23 6 7 8 9 10 12 2ool.start(%)
24 6 7 8 10 12 3ool.start(%)

notes

between age 19 years old and 22 years old the brackets that protects the telomeres are removed by a process called agerty to maximise growth and development by a simple code

create.startagertytomaximizegrowth.start.(onlywhengrowthisready)

create.whenisgrowthdueandreadyinmedavidgomadza.start(growth)

create.whatarechangestothetelomerelengthhasapercentagefromage34to38.start(davidgomadza)

34 10 11 18 23 10 6ool.start(%)

35 8 7 12 18 16 99

36 7 2 12 8 10 60 8

37 10 12 8 6 99 72

38 2 3 8 6 10 12 64asbefore.start(maximumtelomerelengthpercycle.start)

39 28 32 48 66 78 2ool.start(%)

40 38 48 58 68 78 98 0ool.start(%)

41 runoutbutadjusteverythingstarteverythingasbeforebutwithreducedservices.

hasalreadybeenfitted)(status).

After age 41 no one has telomere in the world and this cause the body to panic and start cutting
down things it must have let grow instead of cutting down everything that means human
technically die at the age of 41 all of them as survival of the fittest kicks in if we ask what can be
of humans after me (davidgomadza) then this is the answer humans can now start life at 220
because davidgomadza has managed to replace his and added another at the age of 41
(insightsfromcourtofcreation)

The body is designed not to replace the telomere at the age of 41 but we can add the missing one
at the age of 41 and a brand new one both of 72 cm in size making sure that the minimum a
human being can live up to is 220 just based on telomere replacement but all this depends on the
presents of the AGT that trigger the replacement of telomeres mechanism. The replacement
mechanism for telomeres needs activating after the age of 41 and the activating is done only by
presence of the AGT at least 8000AGT costing currently us\$100 {www.twofuture.world} with an
instantly value of us\$8.4 trillion.

The value of the AGT is based on the fact that if it takes a billionaire only 80 years to make
billions how about if we give that billionaire 8000 years alive in good health how many billions
can he make in that 8000-year period? Hence approximately us\$8.4trillion.

Replacing telomeres makes the body hiccup and an instant 8000000000 years has been added is
instantly heard and if we ask what has been the case it means you would have needed at least
8000000000AGT that could have cost a lot more in the future as mass adoption starts to rise with
campaigns.

Excellent meaning extending life even more by understanding how telomeres reduce in size
throughout life responding to peak times in life and everything stopping at the age of 41 with
devastating results marking the beginning of the end. But not anymore, we have the AGT.

BUY YOURS TODAYWHILST PRICES ARE LOW SOON IT WILL COST US\$1million.
