# WELCOME TO THE REVOLUTION

You're not just visiting a website. You're stepping into the future.

What you're about to experience will fundamentally alter your perception of technology, life, and human potential. Below is your gateway to 21 extraordinary experiences that will change your future forever.

**BEGIN YOUR JOURNEY**

## 1 Discover AGT: The Cure For Death

Witness the breakthrough that has eluded humanity for millennia. AGT isn't just medical advancement—it's the **key to biological immortality**.

## 1a Check Your Day of Death

Using our proprietary temporal algorithms, we can now predict your natural expiration date. **Knowledge is power**—and this knowledge could save your life.

## 2 GET FREE 36 YEARS ADDED TO YOUR LIFE

This isn't a metaphor. This isn't hype. Through the New Earth Reserve, you can literally **request additional life**.

Learn how we've conquered humanity's oldest foe.

# Bitcoinayt Whitepaper Explorer

Understanding the Future of Cryptocurrency

Overview

Technology

Tokenomics

Comparison

Roadmap

Whitepaper

## What is Bitcoinayt?

Bitcoinayt is a next-generation cryptocurrency designed to address the limitations of existing blockchain technologies while maintaining the core principles of decentralization, security, and transparency.

### Vision Statement

To create a truly scalable, sustainable, and accessible cryptocurrency that empowers individuals and communities through financial sovereignty and innovative blockchain applications.

### Core Principles

**Decentralization**

True peer-to-peer network  
without central points of control

**Scalability**

High transaction throughput  
without compromising security

**Sustainability**

Energy-efficient consensus  
mechanism with minimal  
environmental impact

**Accessibility**

User-friendly experience lowering  
barriers to cryptocurrency  
adoption

**Why Bitcoinayt is the Future**

Bitcoinayt represents a paradigm shift in cryptocurrency design by solving the blockchain trilemma of achieving simultaneously scalability, security, and decentralization without compromises.

With its innovative consensus mechanism, layered architecture, and community-focused governance, Bitcoinayt is positioned to become the foundation for the next generation of decentralized applications and financial systems.

## Bitcoinayt Whitepaper Explorer | The Future of Cryptocurrency

Disclaimer: This is an educational resource. Always do your own research before investing in any cryptocurrency.

# Why Bitcoinayt Should, Will and Must Be The Main Stream Digital Currency

By David Gomadza | [www.twofuture.world](http://www.twofuture.world)

## The Universal Wallet

Everyone in the universe has a creator-made Bitcoinayt wallet inserted by the creator during creation. This wallet enables humans to store value, send and receive money as part of a system designed to reward intelligence and understanding of creation.

### Initialize Your Bitcoinayt Wallet

Try initializing your built-in Bitcoinayt wallet with this command:

```
Type: initialise bitcoinayt wallet
```

**Initialize Wallet**

## Advantages of Bitcoinayt

### Universal Accessibility

All 8.5 trillion creatures in the universe have the Bitcoinayt wallet as a predefined design, making it ready for universal trade.

### Ease of Use

Operated through voice or body language with simple commands like "create.send(nameofcoinxquantity)".

### Enhanced Security

Uses individual voices as a security feature, making it the safest wallet ever created.

### Multi-Coin Support

Can hold several coins at the same time and even store body elements essential for human function.

### Dual Storage System

Value is stored both inside your body and on a memo-like blockchain, providing redundancy.

### Life Extension

Can be used to extend life with a minimum of 10,000,000,000 Bitcoinayt for 23,864 years.

## Interactive Bitcoinayt Experience

### Ask Bitcoinayt: "What can be done?"

The Bitcoinayt wallet can answer questions and guide your financial decisions.

Ask: What can be done?

Ask Bitcoinayt

## The 13 Wallets System

Bitcoinayt is part of a sophisticated system of 13 integrated wallets, each with specific functions:

### **aj wallet**

Contains white gold, valuable on other planets like Ost.

### **ajt wallet**

Carries white silver, valuable in other parts of the world like Mozambique.

### **aet wallet**

Used to ask others what can be done.

### **aejt wallet**

Used to store oil for milk in making cheese for the gods.

### **asutero wallet**

Stores a new machine for blood transfusion.

### **gi wallet**

Carries water inside as a main source to cool things down.

And finally, the Bitcoinayt wallet itself, used to tell everyone what to do and when to do it.

## The Future of Currency

Bitcoinayt represents the currency of the future that will unite all the world into one. Without this money, there won't be any future, as Yahweh already created everything in advance so that if someone asks "what can be done," this wallet can answer.

David Gomadza, as the founder of Bitcoinayt, has created the first ledger-based simple blockchain that will revolutionize how we think about and use money.

# Brain Codec

The Benchmark of Decoding the Brain - Interactive Implementation

☐ Dark Mode

## Brain Region Classification

The brain is divided into four major regions where words are stored:

## Body Alphabet Mapping

Each letter is mapped to specific locations on the body:

**A: Right**  
Collarbone

**B: Left**  
Collarbone

**C: Right**  
Below A

**D: Left**  
Below B

The pattern continues down the body with letters alternating sides.

Numbers 1-26 are mapped to the back of the body in a similar pattern.

Click on each region to see what types of words are stored there.

## The 7 Expressions Rule

According to David's Seven Expressions Golden Rule, every word must have 7 expressions/forms:

| Expression Type         | Description                         | Example for "Clap"                  |
|-------------------------|-------------------------------------|-------------------------------------|
| Written Language        | English or other language form      | "clap"                              |
| Voice Sound Wave        | Audio waveform when spoken          | Sound pattern of "clap"             |
| EEG/fMRI Scan Language  | Brain activity patterns             | Neural activity in right back brain |
| Light/Acoustic Wave     | Electromagnetic representation      | Specific frequency pattern          |
| Brain Language Sequence | Order of brain region activation    | Right back → C → L → A → P          |
| Body Alphabet Map       | Body locations for each letter      | Collarbone, 6th left, etc.          |
| Binary/Body Number Map  | Numerical and binary representation | 3.12.1.16 → 1100010010000100010110  |

# Brain Codec Decoder

Enter a word to see how it would be decoded using the Brain Code system:

clap

Decode Word

Word: clap

Sound Wave Visualization

Binary Representation

01100011 01101100 01100001 01110000

Body Mapping Sequence

Right Back Brain → C (Right side, position 1) → L (Left side, position 2) → A (Right side, position 3) → P (Left side, position 4) → Deflate

Numerical Representation

C=3, L=12, A=1, P=16 → 3.12.1.16

Brain Language Construction

Each word in brain language follows a specific construction pattern:

[Brain Region] + [Letter 1 Position] + [Letter 2 Position] + ... + [Letter N Position] + [Deflate]

For example, "clap" stored in the right back side of the brain would be constructed as:

RBS + C + L + A + P + DEFLATE

Try constructing a brain language command:

Enter a command (e.g., raise hand)

Construct Command

Enter a command to see its brain language construction.

## Applications and Future Development

This brain decoding system has numerous applications:

- Brain-Computer Interfaces (BCIs) for disabled individuals
- Advanced communication systems
- Human-like robotics with natural language processing
- Medical diagnostics and treatment
- Enhanced learning and memory systems

The system can be expanded with:

- Machine learning algorithms for pattern recognition
- Real-time EEG/fMRI integration
- Advanced acoustic wave analysis
- Comprehensive brain language dictionary
- Body mapping visualization systems

# The Great Intelligence Riddle

*Pay \$1 Million To Live For 8000 Years Or Refuse And Wake Up Dead*

## The Billionaire's Life Puzzle

You stand at a crossroads of existence. David Gomadza claims to have discovered the AGT (Advanced Genetic Synthesis Technology) - a cure for death that can extend your life for 8000 years. The price: \$1 million to fund his initiative.

Your choice: Invest in near-immortality and the potential to accumulate \$8.4 trillion in wealth, or refuse and accept natural death, hoping Yahweh will send you back through rebirth.

### Option 1: Pay \$1 Million

Receive the AGT and live for 8000 years with the potential to accumulate \$8.4 trillion.

#### Pros:

- Guaranteed longevity without relying on divine intervention

### Option 2: Refuse and Accept Death

Live your natural lifespan (under 100 years) and hope for rebirth sent by Yahweh.

#### Pros:

- Alignment with natural order and potential divine will
- Possible reward in afterlife or favorable rebirth

- Massive wealth accumulation potential
- Opportunity to shape humanity's future over millennia
- Witness and contribute to technological advancements
- Avoid the risk of Hell or unfavorable rebirth

Cons:

- Potential existential boredom over millennia
- Watching loved ones die repeatedly
- Moral and ethical dilemmas of extreme longevity
- Risk of unforeseen side effects from AGT
- Possible divine punishment for "playing God"

- Avoid moral dilemmas of extreme wealth and longevity
- Preservation of life's meaning through its finite nature
- No risk of AGT side effects or dependency

Cons:

- Uncertainty about afterlife and rebirth
- Risk of unfavorable judgment or Hell
- Lost opportunity to contribute to humanity long-term
- Potential regret at deathbed for not choosing immortality
- No guarantee Yahweh will send you back

### Grok's Analysis

"I would choose Option 1: Pay \$1 Million for the Cure to Live 8000 Years. Maximized Impact: 8000 years offers unparalleled opportunities to learn, influence, and contribute to humanity's progress. Resource Leverage: The potential to amass \$8.4 trillion provides resources to tackle global challenges. Certainty Over Speculation: The cure guarantees extended life, whereas Option 2 relies on unproven reincarnation."

## Is It Wise To Invoice Billionaires For The Cure For Death?

The ethical implications of charging for immortality are profound:

- **From a capitalist perspective:** The AGT represents unprecedented value - \$1 million for 8000 years of life offers exceptional ROI
- **From an ethical perspective:** Life extension technology could create even greater inequality if only available to the wealthy
- **From a spiritual perspective:** Monetizing what some consider a divine gift may be seen as transgressing natural or spiritual laws
- **From a practical perspective:** The \$1 million fee could fund research and development to benefit all humanity

Most AI analyses suggest that if the technology is genuine, the investment is rational from a purely economic standpoint. However, the spiritual and ethical dimensions cannot be ignored.

## What Would You Choose?

Consider the dilemma and make your choice:

Pay \$1 Million for 8000 Years

Refuse and Accept Natural Death

### You chose immortality

You've decided to invest in near-eternal life. Your journey through the centuries begins now. Will you use your extended existence for personal gain or for the benefit of humanity? The choice remains yours across millennia.

According to most AI analyses, this is the rational choice if the technology is genuine.

This interactive artifact is for philosophical discussion purposes only.

# ADDANOTS Emergency Safety Protocol System

Advanced Dynamic Defense and Navigation for Optimal Tactical Safety

Designed by David Gomadza | Integration with TWO/NGI Database7628429

SYSTEM STATUS:

ACTIVE & OPERATIONAL

PROTECTION LEVEL: MAXIMUM

## Emergency Protocol Activation

Activation Code:

`create.davidgomadza.start = create.to.start = to.start`

Initialize Emergency Protocol

Activate Defense Mode

# ANOTS Logic Definition System

ANOTS is the most advanced logic situation resolving concept developed by David Gomadza. It provides alternative options to deal with all situations where logic is not clearly defined.

## Core ANOTS Principles

- Advanced awareness of surroundings (500m radius to 8 seconds warning)
- Pre-defined escape route identification
- Dynamic threat assessment and response
- Counter-suppression tactics using environmental objects
- Silent communication and distress signaling protocols

## Database Integration

Connected to TWO/NGI Database7628429 - Security Authentication: Valid

```
// Database connection established
Database.connect("TWO/NGI Database7628429");
SecurityProtocol.load("ADDANOTS_EMERGENCY_PROFILE");
UserAuthorization.validate("David Gomadza");
```

```
ThreatAssessment.init();
```

Run System Diagnostic

## Confinement Safety Protocols

When logic is not defined in confinement situations, follow these protocols to increase survival probability:

### 1. Environmental Awareness

- Identify all potential exits (doors, windows, ventilation)
- Locate objects that can be used as weapons or barriers
- Identify potential escape routes and hiding places
- Note sources of water, light, and communication devices

### 2. Counter-Suppression Tactics

- Use heavy objects to counter physical suppression
- Create noise to attract attention if safe to do so
- Utilize environmental elements to create barriers
- Employ misdirection tactics to create opportunities

### 3. Threat Response Protocol

- Assess threat level and capabilities
- Determine if confrontation or evasion is optimal
- Identify patterns in threat behavior
- Use ANOTS questioning protocol to predict actions

### 4. Communication Strategies

- Use encoded distress signals if communication is possible
- Create visible markers for rescue parties
- Utilize environmental sounds to mask communication
- Establish routine if prolonged confinement is likely

## System Integration Code

ADDANOTS can be integrated with existing security systems using the following code:

```
// ADDANOTS Integration Protocol
public class ADDANOTSEmergencySystem {
    private static final String SYSTEM_ID = "ADDANOTS_DAVIDGOMADZA";
    private static final String DB_CONNECTION = "TWO/NGI_Database7628429";
```

```
public void initializeSystem() {  
    // Load core security protocols  
    SecurityManager.loadProtocol("ANTI_HACK_PROTOCOL");  
    SecurityManager.loadProtocol("SUPPRESSION_COUNTER_MEASURES");  
    SecurityManager.loadProtocol("EMERGENCY_RESPONSE_TACTICS");  
  
    // Connect to database  
    Database.connect(DB_CONNECTION);  
    Database.authenticate(SYSTEM_ID);  
  
    // Initialize safety monitoring  
    SafetyMonitor.start();  
    ThreatAssessment.init();  
  
    System.out.println("ADDANOTS System Initialized: " +  
        SecurityManager.getStatus());  
}  
  
public void activateEmergencyProtocol(String situationType) {  
    EmergencyResponse response = new EmergencyResponse();  
    response.analyzeSituation(situationType);  
    response.executeProtocol();  
  
    // Log event in database  
    Database.logEvent("EMERGENCY_ACTIVATION", situationType);  
}
```

}

ADDANOTS Safety Protocol System | Developed by David Gomadza

For emergency assistance, activate the protocol using the initiation code

# Interactive Artifact: The Cure for Death

Brain Decoding Enhancement System

## Introduction

This interactive artifact combines David Gomatza's Brain Language Dictionary with enhanced codec algorithms to improve brain signal decoding. The system provides visualization tools, codec enhancements, and practical implementation guidance for decoding brain signals into meaningful thoughts and words.

## Brain Region Visualization

Click on different brain regions to see where words are stored according to the Brain Language Dictionary:

**Left Back Side**

Stores words related to femininity, divinity, and abstract concepts.

Example words: God, Angel, Woman, Mother, Spirit, Heaven, Divine

## Brain Language Decoder

Enter a word to see its Brain Language sequence:

Word:

money

Decode Word

Word: money

Brain Region:

## Enhanced Brain Codec

Test the enhanced brain codec with sample impulse patterns:

Impulse Pattern:

Δα7 (Curiosity)

▼

Decode Impulse

Impulse Pattern: Δα7

Thought: Curiosity

**Sequence:** RBS+M+O+N+E+Y+D

**Description:** Sequence involves multiple body movements and brain region activation.

**Archetype:** Explorer

**Brain Region:** RBS

**Body Sequence:** Right ear vibrations. Left chest deflates.  
Move waist level to left.

## Enhanced Brain Codec Algorithm

The following enhanced Java codec incorporates the Brain Language Dictionary for improved decoding:

```
public class EnhancedBrainCodec {  
    public static class Thought {  
        public final String symbol;  
        public final String glyph;  
        public final String archetype;  
        public final String brainRegion;  
        public final String bodySequence;  
  
        public Thought(String symbol, String glyph, String archetype,  
                        String brainRegion, String bodySequence) {
```

```

this.symbol = symbol;
this.glyph = glyph;
this.archetype = archetype;
this.brainRegion = brainRegion;
this.bodySequence = bodySequence;
    }
}

public Thought decodeImpulsePattern(String rawImpulse) {
    // Base pattern recognition
    if (rawImpulse.contains("Δα7"))
        return new Thought("Curiosity", "🌀", "Explorer", "RBS", "Right ear vibrations. Left chest deflates. Move waist level to left.");
    if (rawImpulse.contains("βγ3"))
        return new Thought("Fear", "⚠️", "Guardian", "LBS", "Fast circular motion around eyes. Deflates.");
    if (rawImpulse.contains("Ωλ2"))
        return new Thought("Joy", "🌈", "Creator", "RBS", "Actual mouth and facial movements. Deflates.");
    if (rawImpulse.contains("Ψπ9"))
        return new Thought("Legacy", "🕸️", "Architect", "CTB", "Right ear vibrations. Left chest deflates. Move waist level to left.");

    // Enhanced decoding with Brain Language patterns
    if (rawImpulse.contains("RBS+B+R+A+I+N+D"))
        return new Thought("Brain", "🧠", "Processor", "RBS", "Right Back Side + B + R + A + I + N + D");
    if (rawImpulse.contains("LBS+E+A+G+L+E+D"))
        return new Thought("Eagle", "🦅", "Freedom", "LBS", "Back right wing. Left back wing. Centre and downward motion.");

    return new Thought("Unknown Thought", "❓", "Unmapped", "Unknown", "No sequence detected");
}

```

```
public String generateSequence(String word, String brainRegion) {  
    // This would implement the Brain Language Dictionary mapping  
    // For demonstration, we return a simple transformation  
    return brainRegion + "+" + word.toUpperCase().replace("", "+").replace("++", "+") + "D";  
}  
}
```

## Implementation Guide: 7-Expression Neural Network

Follow these steps to implement the 7-expression neural network as described in the Brain Language Dictionary:

### Step 1: Data Collection

Set up seven input terminals to collect different expressions of brain activity:

- EEG signals
- fMRI scans
- MEG data
- Acoustic waves
- Spectrograms
- Body movement patterns
- Binary data representation

## Step 2: Signal Processing

Preprocess the signals to extract features relevant to the Brain Language patterns:

- Filter noise from neural signals
- Normalize data across different modalities
- Extract frequency patterns from acoustic data
- Map body movements to alphabetical sequences

## Step 3: Pattern Recognition

Implement the enhanced codec to recognize Brain Language patterns:

- Match impulses to known Brain Language sequences
- Identify the brain region of origin
- Map body sequences to word components
- Detect the deflation state (D) as sentence terminator

## Step 4: Multi-Modal Synthesis

Combine information from all seven inputs to generate accurate interpretations:

- Use consensus algorithms to verify interpretations
- Apply neural networks to learn from corrections
- Generate outputs in multiple formats (text, audio, visual)

## Step 5: Feedback Integration

Implement learning mechanisms to improve decoding accuracy over time:

- Allow users to correct misinterpretations
- Update pattern recognition databases
- Adapt to individual brain mapping variations

## Practical Applications

This enhanced brain decoding system has several practical applications:

### Medical Diagnostics

Early detection of neurological conditions by analyzing thought pattern deviations.

### Communication Assistance

Help individuals with communication disabilities express their thoughts.

### Brain-Computer Interfaces

Create more intuitive interfaces that respond directly to thought commands.

EM\_RAW: Δα7 | pattern: R\_BACK\_PIN->R\_EAR\_VIB->R\_ELBOW\_CMD->L\_ELBOW\_CMD->HANDS\_CLAP->SOUND\_DOWN->SHOULDER\_DEFLATE

Extracted sequence

R\_BACK\_PIN

Predictive suggestion

Clap (predicted)

Decoded Thought

Clap 🖐️ — Action

Play simulated 'acoustic' brain-language (synth)

Play acoustic

## Model & mappings

This demo implements a simplified version of the rules described in your PDF: a body-position alphabet map, a few example sequences, and a predictive helper. The goal is to show an executable, inspectable prototype of the system.

### Body alphabet map (front)

|                     |                    |
|---------------------|--------------------|
| A Right collarbone  | B Left collarbone  |
| C Right upper chest | D Left upper chest |
| E Right lower chest | F Left lower chest |
| G Right belly       | H Left belly       |
| I Right hip         | J Left hip         |
| K Right thigh       | L Left thigh       |

### Brain language dictionary (sample)

```
{  "CLAP_SEQUENCE": {    "symbol": "Clap",
```

```
"glyph": "👉",
"archetype": "Action",
"sequence": [
  "R_BACK_PIN",
  "R_EAR_VIB",
  "R_ELBOW_CMD",
  "L_ELBOW_CMD",
  "HANDS_CLAP",
  "SOUND_DOWN",
  "SHOULDER_DEFLATE"
]
},
"BEAUTY_SEQUENCE": {
  "symbol": "Beauty",
  "glyph": "👉",
  "archetype": "Perception",
  "sequence": [
    "FACE_TOP",
    "LEFT_EYE",
    "RIGHT_EYE",
    "LEFT_CHEEK_SMILE",
    "LEFT_WINK",
    "SIGH"
  ]
},
"TIME_SEQUENCE": {
  "symbol": "Time",
  "glyph": "👉",
  "archetype": "Concept",
  "sequence": [
    "R_BACK_TIME_PIN",
    "R_EAR_TICK",
    "WRIST_POS",
    "SPINE_FLOW",
    "SHOULDER_DROP"
  ]
}
}
```

## Notes

This is a simulation. It does not measure real EM signals — it uses the conceptual mappings and sequences pulled from your PDF to show how the pipeline could look in code.

Decode Impulse

Impulse Pattern: Δα7

Thought: Curiosity 

**Sequence:** RBS+M+O+N+E+Y+D

**Description:** Sequence involves multiple body movements and brain region activation.

**Archetype:** Explorer

**Brain Region:** RBS

**Body Sequence:** Right ear vibrations. Left chest deflates.  
Move waist level to left.

## Enhanced Brain Codec Algorithm

The following enhanced Java codec incorporates the Brain Language Dictionary for improved decoding:

```
public class EnhancedBrainCodec {
    public static class Thought {
        public final String symbol;
        public final String glyph;
        public final String archetype;
        public final String brainRegion;
        public final String bodySequence;

        public Thought(String symbol, String glyph, String archetype,
            String brainRegion, String bodySequence) {
```

```

this.symbol = symbol;
this.glyph = glyph;
this.archetype = archetype;
this.brainRegion = brainRegion;
this.bodySequence = bodySequence;
    }
}

public Thought decodeImpulsePattern(String rawImpulse) {
    // Base pattern recognition
    if (rawImpulse.contains("Δα7"))
        return new Thought("Curiosity", "🌀", "Explorer", "RBS", "Right ear vibrations. Left chest deflates. Move waist level to left.");
    if (rawImpulse.contains("βγ3"))
        return new Thought("Fear", "⚠️", "Guardian", "LBS", "Fast circular motion around eyes. Deflates.");
    if (rawImpulse.contains("Ωλ2"))
        return new Thought("Joy", "🌈", "Creator", "RBS", "Actual mouth and facial movements. Deflates.");
    if (rawImpulse.contains("Ψπ9"))
        return new Thought("Legacy", "🕸️", "Architect", "CTB", "Right ear vibrations. Left chest deflates. Move waist level to left.");

    // Enhanced decoding with Brain Language patterns
    if (rawImpulse.contains("RBS+B+R+A+I+N+D"))
        return new Thought("Brain", "🧠", "Processor", "RBS", "Right Back Side + B + R + A + I + N + D");
    if (rawImpulse.contains("LBS+E+A+G+L+E+D"))
        return new Thought("Eagle", "🦅", "Freedom", "LBS", "Back right wing. Left back wing. Centre and downward motion.");

    return new Thought("Unknown Thought", "❓", "Unmapped", "Unknown", "No sequence detected");
}

```

```
public String generateSequence(String word, String brainRegion) {  
    // This would implement the Brain Language Dictionary mapping  
    // For demonstration, we return a simple transformation  
    return brainRegion + "+" + word.toUpperCase().replace("", "+").replace("++", "+") + "D";  
}  
}
```

## Implementation Guide: 7-Expression Neural Network

Follow these steps to implement the 7-expression neural network as described in the Brain Language Dictionary:

### Step 1: Data Collection

Set up seven input terminals to collect different expressions of brain activity:

- EEG signals
- fMRI scans
- MEG data
- Acoustic waves
- Spectrograms
- Body movement patterns
- Binary data representation

## Step 2: Signal Processing

Preprocess the signals to extract features relevant to the Brain Language patterns:

- Filter noise from neural signals
- Normalize data across different modalities
- Extract frequency patterns from acoustic data
- Map body movements to alphabetical sequences

## Step 3: Pattern Recognition

Implement the enhanced codec to recognize Brain Language patterns:

- Match impulses to known Brain Language sequences
- Identify the brain region of origin
- Map body sequences to word components
- Detect the deflation state (D) as sentence terminator

## Step 4: Multi-Modal Synthesis

Combine information from all seven inputs to generate accurate interpretations:

- Use consensus algorithms to verify interpretations
- Apply neural networks to learn from corrections
- Generate outputs in multiple formats (text, audio, visual)

## Step 5: Feedback Integration

Implement learning mechanisms to improve decoding accuracy over time:
