A better world

OAX

This is the only place in the body that can make any human rotate in any direction in that if a propeller is put there this will literally control every movement from asking to sleep to death apart from this there is no point that can be controlled by anything that means its the only place designed by ya to insert a propeller because if he wanted to control humans in the strict sense he would have to design something that can be used there so he designed the aox that sends signals to all body but that's how he fail because this aox is or was designed by zeus in his $00000^{28}29$ drawings which he labelled as the aox but one that was refused as being brutal to human hence when the plans were abandoned humans were believed to have been served hence the have mercy on humans being to find the image and start a revolution never seen before with one David Gomadza that saw the longest ago ever that kept going on that seems never to stop as a new pattern of humans that can live forever will emerge some say it's a one off if it's a one off then this should have never happened critics of David Gomadza think he is arrogant [ADNA]

I think as David Gomadza himself its not arrogance we as human have potential to change things and change perception as well instead as being regarded as the weaker ones we can become the dominant ones of all creation as I right now my long ago has become the highest in all the universe current today standing at 78078078078078078078078078078078078078

9867899280$^{[7777777777777777777777777777777777777777777777777777777777777777777777777777\ 7777777 digit number]}$ meaning it will take 1 billion seconds for me to die even from a gun wound because death is not controlled by object or where you are shot but by long ago making it the largest in the universe but as thing stand the second best is at

680680680680680680680680^{72838689}6666666666666666666666666666666666666
666666666666666666666666666666666666666666666666666666666628 meaning that this
person will live up to 1 billion years and will take same time to die as
well.

OAX CONTINUED

I am the pivot to the oaxial that makes all human turn up and down
and as such anything that means that if humans can then this is the
only place that can make all humans pivot all round that means a
rotary placed there at angel 85 degrees north and at 28 degrees
south to true north will make humans move in all directions and as
such will cause all kinds of movements hence if we look at this from
a creator point of view zeus had a master plan to make all humans
submissive by placing a radial oscillating rotary there of xy-t+t that
can make humans rotate in all directions meaning that if we are to
use the above argument then zeus is saying that humans can be
controlled and be told what to do without any instructions from the
creator that means that if humans want to be controlled then they
can easily be controlled through this point but I understand that is
what some do

ZEUS 00000^{28}29 DRAWINGS

I am going to put a sketch of how the human body would look like if
I am to draw it in such a way that it resembles an oax that is placed
on top of a hill in such a way that if we are to place it on top of the
hill if it rotates it touches the bottom of the hill and the top air of
the atmosphere that charges the oax using as equation xy=m-
aopqrstuvw that means that if I am to write an equation then this is
the equation if we are to say that if the oax is to rotate then it must
fulfill this that
1] it must be at a height of 1.6m on humans from the ground and
must be at a height of 1.63 cm from the ground and as such the
dimensions are such that if we look at it from the top then the
dimensions are such that if we ask what can be then these are the

dimensions 28cm [decimeters] from the waist of a human being the region of the ground near the ground as such this place means area surrounding if it we ask what can be of oax and the oaxial then this is the answer oaxial will rotate as long as there is momentum at the oax this means that if we ask what can be done to humans here at the oaxial then this is the answer we can always ask what can be of humans that

ROTARY AND TRANSISTOR AT OAX

If we can place everything at the oax and operate all this namely
1] atererean
2] a rotary attached to the transistor we have this as xteraterate meaning power source powered xy728698 and xy82386xy perfectly matched labelled davidgomadza but with comments made by adna saying he might be faking to be Yahweh's representative but has everything mentioned in the book of creation page 89868782838902890183868744890 now if we are to test these then the output is 0.8286xy that means the exact output generated by his artificial one so how can he be faking

3] an iterate I can easily make this since I now know the power output so if xy728698 and xy82386 perfectly matched then we can get the iterate as power output plus xy-xy728698+xy82386xy=769838128 this means that the power output is 0.8286xy-xy728698+xy82386=769838128=71285xy now we have the iterate from the above equation xy-xy728698+xy82386xy=769838128=28192xy=0.82 this means that if we add the power source now our iterate become xy-xy728698+xy82386=2210386xy this means our iterate require a power output of xy210386xy meaning xy=10x20cm=we can reduce every size by 5cm [half] only meaning xy=5x20cm we can halve the length of a capacitor and get the same output meaning now our measurements are xy=5x20com meaning our final; iterate is xy=769838128 gives us now xy82386xy as it measure capacitance then it becomes xy82386xy meaning now everything should look like this xy-xy728698+xy82386 xy now if we say what can be done then this is the answer is we can ask what is to be of iterates that must help capacitors to deliver their messages they must be able to answer

Yahweh correctly so he know what do to now add everything up using internal calculator just say add everything up and tell me the answer is if we ask the iterate it will say the iterate is 9836828xy meaning we need a capacitance of 0.178698 for everything to work perfectly now we can say that iterate is 9836828xy

We can look again at atererean what are you I am the source of power for a;; living organism and humans I tell everyone else what to do I say wake him up I say lay still I say die but no human can use without long ago of 12sec so what can be done is xy-xy728698+xy82386xy=that means for normal human being divide by 8698386284 as a must so never reveal true value for creators for humans use only 1238698286 meaning that if we ask now what can be done then this is the answer humans with a long ago of 8 seconds will need atererean of 1238698286 that means that our atererean is 0.869838xy now that we got everything we need now to add everything up before we connect everything we can use a create code Create.addatererean0.869838xy+xy-xy728698+xy82386xy+983828xy

Create.addatererean0.869838xy+xy-xy728698+xy82386xy+9836828xy+

4] arooster what are you I measure capacitance but in humans with long ago meaning 12 seconds meaning those with 8 seconds cant use me but can switch to aroost what are you I measure capacitance in humans with low long ago of 8 seconds meaning all humans apart from davidgomadza from the living records by individuals how many records does he holds altogether total 96 records worth US$789 trillion now if we ask what can be then this is the answer an aroost can be added easily by asking what aroost he had before the upgrade he had an aroost 76284898xy that means if he is building for others he need 76284898 xy and if for himself then he needs an arooster 76284898xy important as mixing is bound to cause instant death now that we have everything we need that means that we can now

add all equations

TESTING AND MAKING THIS FOR OTHER HUMANS WITH A LONG AGO
OF 8SEC
Create.addatererean0.869838xy+xy-
xy728698+xy82386xy+76284898xy+0.869838xy.startx84.initialise.n
ow.savex84.start[notdavidgomadzahumanbuthis...]

 NOTES
I used my clone/soul to perform this task after asking it to adjust then
this was the results of the create code
I bend forward first 38 degrees north then I return then I move 80
degrees south then 90 degrees north then 70 degrees east then 60
degrees west then bend in submission 8 times forward before
returning to the place [what behind you a window] what do you see
dim sun the emperor Chinese cruise from David Gomadza human
writing down David is facing me looking outside the window meaning
I am looking at him that means I turn to him looking at him that
means if I turn to dim sun the emperor Chinese cruise my angle is 78
degrees

Testing on myself with help of Adna
 As it turns out he must test everything on himself as well that means
the first test on himself is as a human who has been upgraded we can
easily found all that we need by getting all values from his
[davidgomadza:me]   database meaning the atererean we need is
slightly higher at 0.9861238xy this is the atererean we use for testing
on him [davidgomadza] that means the equation is now
create.addatererean0.9861238xy+xy-
xy728698+xy82386xy+9836828xy+0.9861238xy.startx84.initialise.n

lectricpoweredaoxaratedavidgomadza7628983868.startx84.initialis
e.now.savex84.start.start[forever^{6000}]

you can refer to patent 89283860928386 which was already
approved that means your davidgomadza valuation has reached
US$898123 trillion I am a controversial patent though but finally
approved by the institute of medical council in Britain for a person
called David Gomadza who has now successfully written the real
artificial equation and coordinates and even tested everything to
make sure that everything works and has been approved.

NONELECTRIC POWERED REMOTE CONTROL

We can easily calculate interference which we can use to construct a device that can be operated remotely so we need a new gadget human call remote control all it does is control all the valves they use like the airduct and the amplifier that means we can easily say as we are about to find out we can always add everything back and ask our subjects what all this is

101] ajero ajersat
102] astro astrost
103] aros aroset
104] arot arost
105] ajer ajerost

What this means is that we can easily control every movement using the above keys meaning we can make anyone phat using ajero instead of ajersat because on the left do the opposite as on the right side humans all have what is on the right side meaning all bad on the left [what number are you] so press hard when just attach corresponding number is aouet then attach 7 after pressing 12 to eradicate aou that means we need extra keys meaning we must now add extra services like add new keys that means reverting to the old system but with some controls instead now add

1] ask how
2] know when
3] use if
4] guide we
5] adjunct can
6] afract ask
7] atoll how
8] atoal if
9] atal we
10] atar can
11] atat talk
12] atatup but
13] ataomnp not
14] asatar with
15] aoster you
16] aost but

17] aater with
18] ajer your
19] ajero body
20] ajerst then
21] ajester this
22] ajestor is
23] ajestar how
24] ajux to
25] ajuxer do
26] ajuxert this
27] ajerst ok
28] ajetor right
29] dead
30] deaddead

Then use digits like how and when as 12 and so on if you want to block access to all unauthorized and force calculate their long ago this is how if we can we can ask for their long ago as compared to use if they use a very long ago of 8 seconds they die automatically Now if we ask what can be then this is the answer we can now compound everyone's longago of all those who connected then the results are sent 5 times

Create.keypadrightbadall1to105blockandbanthensendto.eeknm^2 eeknm^1 eeknm^{1033}.startx84.initialise.now.savex84.start

Mgiscre.ask.davidgomadza.start.keypadrightbadall1to105blockandb anthensendto.eeknm^{2}eeknm^{1}eeknm^{1033}.startx84.initialise.now.save x84.start.start[forever^{7200}]

That means we got rid of all these bad keys on the right some can use to cause all kinds of injuries after all is solved the system will calculate automatically longago of all enemies to their fall from grace that means a secure system

CORRECANALOGUEDAVIDGOMADZA

Now as requested

We can simply create a digital analogue that automatically play the opposite as an automatic corrector named correcanaloguedavidgomadza meaning now since we know how it can be done we can simply stop all transenders now we can add some equations to solve this if we ask what can be then this is the answer we can add all then this is the answer we can add then subtract all that means we can just say add 1 to 105 on both sides then give us the values these are

Rightside 89286838684828982810101 0284

Leftside 87868382818089283867890284012386109 that means these are our ranges and how we can easily add xy to get xy89286838684828982810101 0284 and xy87868382818089283867890284012386109 that means our equation x-y+xy+xy-xy89286838684828982810101 0284+ xy87868382818089283867890284012386109=890284012386109=x -y+xy71727374 that means our equation now becomes x-y=xy71727374 that means x=y+xy71727374

y-y+xy71727374=value=xy71727374

if I can then what that means now simply create a code that you can add to cancel all bad by saying x-y=xy71727374+xy87868382818089283867890284012386109-xy89286838684828982810101 0284=0.0689828386xy this means that if we add all above we get 0.0689828386xy now if we subtract all through this equation x+y=xy71727374-xy87868382818089283867890284012386109+ xy89286838684828982810101 0284=1.2868928386xy this means that if we say x-y=x+y we get 0.0689828386xy-

14

1.2868928386xy=0.0689828386xy+1.2868928386xy meaning 0.12386848xy=1.02386748928xy now say the final figure is x=x-y=0.0689828386xy-1.2868928386xy=x=0.01238671xy that means to get the digital analogue for auto corrections add x+y-y+0=0x10 where 10 is ambient that means 0.01238671xy+1,28689928386xy-1.2868928386xy +0=0x10=0 so the lowest 0.01238671xy is lowest range if lowest then highest we have already as 1.2868928386xy our correcanaloguedavidgomadza is create.add0.01238671xy+1.28689283xy.start

mgiscre.ask.davidgomadza.start.add0.01238671xy+1.28689283xydavidgomadza.startx84.initialise.now.savex84.start.start[forever^{3200}forever^{7800}]

HOW TO OPERATE THE REMOTE CONTROL

The remote is a simple and straight forward remote that you can add and control someone remotely with few functions that can be upgraded you can easily add all these

1] asert how
2] asrtert can
3]asoert we
4] asuert find
5] atetero ways
6] auerert to
7] aqertert make
8] aouertst you
9] avertopmn move
10] ajertuvert about
11] asuerostup without
12] amnop you
13] asmnoperst complaining
14] aquerstop and why

15 aqerou did

16] asuerteromnop you

17] ageromnop do

18] averotep that

19] ajeros but

20] aouvet we

21] aomuer can

22] aotper always

23] aqemnop find

24] azert out

25] aoutrq how

26] ajtor to

27] ajertomnoper do

28] azertert that

29] aqrster ok

Now we can easily add as many functions by simple create commands that can start everything up for example move to the left we can add a create code that add a move command then to the left for example move to centre can be move + centre on a remote control and hence any remote and create can be used to control and kinds of movement so you can buy any remote for £1 and program it.

PATENT DETAILS

REQUEST FOR THE GRANT OF A PATENT. A Universal Brain Decoding

Device.

Now we can see why all this is important because we need a brain recorder in the end what we have gives as the basic information but to complete the job we need two other things which we already have a digital brain analogue and a brain reading device then the patent is completed but how do we construct complicated things like things from no where we can add a digital analogue that we can construct using a simple equation that says if we can then we cant because if we cant then it means that we can but if we ask what that we cant is then we get what we can but with reservations that means we must also act and assign things and everything values we might need to completely finish everything off but we can be running out of time meaning we finish this as part one then complete the other things as part two.

We can use create codes to complete the rest of the processes
needed that means we can literally command the rest of the
process everything in the body understands create codes as the
written language now this is the list of everything you will need to
complete everything

1] a reader

INSTRUCTIONS

Create.   Start

1] ask the brain to clone itself

2] ask the brain to jump out and split into 2

3] ask the brain to check with RSA this tells it instructions

4] RSA tell the brain to clone and jump out then split and divide then one go to the brain decoder and ask for atl atl asks questions now inside atlthen brain freezes so to unfreeze it say wake up then ask what where when with who and how the freeze renmoves all other thoughts what is left is the how the when the why the if and the what this is all that is needed

5] the what must go to the brain together if we ask what can be of brains. And what this is the answer the what must jump to the brain trancuder which is located in the brain decoder at the bottom the reason being that the trancuder acts to arrange in order of priority measuring that if we ask what can be done then this is the answer we can always ask what is to be done in these circumstance then this is the answer we can always ask what was before and what can be done in these circumstances this means that if we ask what can be done the answer is we can send now tjhis what answer to the brain trabcuder and say what then this removes the binary of the what making sockets exposed by the what part if we don't say what the brain thought will dissipate

6] if now we know the what now add the when and send to

the brain transfigure then ask what else to do so that the
binary is removed on the sockets now say go brain to the
transfigure and enter the sockets and ask what can be done
then go to the end of the decoder and ask what can be done
about all this then ask for something more then go to te
brain decoder and enter there to give results if this is not
done then there wont be any results

7] if we can then what can be done and how and when this
sends everything to the transfigure which makes things fast
but ordering them in hierarchy of importance if we ask what
can be done then this is the answer we can always ask and
get some results we can always say we can go and check if
this is so now send all we need and go and check

THIS PART NOT FOR HUMANS SKIP

ADD A DIGITAL ANALYSER TO VERIFY EVERYTHING

We can now add a digital analyser that can be used to verify everything
and make sure that everything works fine and this is easily constructed
without complex equations as before we can easily say every part of the
body follows something so that we can easily identify that what it follows
that means every movement makes the body move from left to right and
vice versa that means if we move to the right everything else move to the
right so that we can easily find out that which is the item that has moved
to the right following the direction of movement through a simple
equation that say if you can move then do it first but slowly and
synchronized that means the values are slow but fast but accurate so this
describes and memory membrane that says move I can take over and
then stops but when it stops something else start moving so we can say
when memory membrane start to move the body stops then when the
memory membrane has stopped then the body started to move hence we

34

can easily write this equation x-y+xy-xy+xty=0 this means that when every time a body moves then it will also move to the left or right so direction if included the equation becomes x-y+xy-xy+x+y=R+L=0 now we can substitute the values we got earlier on and have

x-y+xy89286838684828982810101 0284-
xy87868382818089283867890284012386109+x+y=R+L=0 now
x=2.858678902838760 and ya=3.86789028467890 that means that
if we ask what can be done then this is the answer x can be added
back to the equation to get x=98.678902849867890 that means that
if we divide that number by the value of y then we get the ambient
which normally is 10 for nonmoving things but in this case 9.9867
that means that if we want to know more them we can always ask
what can be done and why this is because now we can easily know
what to do but then we have a lot of work so we can easily ask an
ambient analogue that can be easily inserted into a human being
through a create code that say if I can be asked then it is
create.addambient.start now remove ambient by
create.undoaddambient.start

but as we can see the idea is to detect movement inside the body rather than fly or make humans fly now add back ambient create.addambient.start
