

*With Highness as your trusted guide,
a T.H.C DAO to help decide,
a VR journey in the land of Tokes,
merging Crypto and Cannabis folks,
Tokers NFT 's unlock the ride!*

iNFO!

**MUCH
WOW**

- Tokings, Highness C.

Remember how much you struggled to roll a joint your first time round? Let's be real—you probably tore the paper, spilled half the stash, and ended up with a joint more crooked than a South African traffic officer.

Don't worry, though—this Litepaper is nothing like that. It's perfectly rolled with all the details: the vision, the mechanics, and the master plan to keep the vibes high, the Tokes flowing, and the NPCs at bay.

HiGH THERE! (PROLOGUE)

PROBLEM

The **Cannabis** industry is *greener* than ever, but the laws surrounding it are less consistent than the first batch of edibles you tried back in high school. Meanwhile, the **Crypto** industry is reaching all-time *highs*, but it's still harder for newcomers to navigate than rolling a joint on a windy day. Although both **Communities** are vibing, their lack of integration ignores an opportunity to truly *spark* something bigger.

SOLUTION

Considering we only *toke* on cannabis and don't actually sell it, we fortunately avoid the regulatory red tape still tangling up related industries. This freedom lets us focus on combining the utility of crypto, the creativity of cannabis culture, and the power of community into a space that's truly one of a kind. At **The Tokelands**, we've designed a phased roadmap to bridge these gaps and cultivate a unified, immersive and one-of-a-kind Web3 ecosystem. Here's what we're *rolling out*.

RESULT

The result is a vibrant, self-sustaining mini-universe with a unique culture, cultivated by our community and brought to life through the epic Tale of the Tokelands, as narrated by our charismatic mascot, Highness C. Tokings. In **The Tokelands Web3 Ecosystem**, Toke Tokens (TOKES) fuel interactions, while Tokers NFTs serve as exclusive membership access cards, unlocking unique perks and privileges. The Toke Tent metaverse lounges are ideal for socializing, or chilling solo, offering immersive experiences like live concerts, gaming tournaments, and comedy shows. Ultimately, the marketplace completes the ecosystem, by enabling the sale of timely Puff-Passes and Toke-Tickets to non-members, businesses, or projects entering The Tokelands. The revenue generated from these sales, and all other income streams, are placed in the Stash Box (treasury) and managed by the Highness DAO, for transparent and community-driven growth.

HIGHNESS

2

WHO To be blunt, Highness is the terribly energetic, NPC-fighting, guild-rallying, toke-taking mascot of The Tokelands. Highness represents the essence of creativity—unbound, unhindered, and untaxed. He pays homage to Weeds ability to inspire this very creativity, dissolve minor doubts and allow inherently original peeps to push the limits of their potential higher and higher.

WHAT Highness is more than just a character; he's a reference point—a blank canvas, a replicable design that invites creativity from anyone at any time. Whether it's through art, writing, music, or drama, Highness is a being that can shift, morph, manifest, or transform into any form or outcome your imagination can perceive. He's a genie who's escaped his lamp - and is yearning for adventure.

WHERE Highness hails from the Tokelands, a mystical region in Gaia where magic, creativity, and courage thrive. Born from the collective imagination of the guilds, Highness is a guardian and guide, ever-present to lead the charge against the NPC hordes.

WHEN Highness emerged during the ancient times of Gaia, when the first Etheric Magic began to fade, and the Guild Elders made their noble sacrifices to forge the TokeChain. In these critical moments, Highness was conjured to unite the guilds and ignite their shared mission of resistance and restoration.

WHY Highness embodies the core ethos of the Tokelands: creativity, autonomy, and the freedom to innovate. Highness is a rallying beacon for the Toke Token allies, uniting them under the banner of autonomous creativity. They are the symbol of our unrelenting pursuit to do cool sh*t just because we can.

HOW Highness narrates the epic tale of the Tokelands, weaving the story of sacrifice, unity, and resistance into every facet of the project. From guiding newcomers through the lore to energizing the community with his infectious enthusiasm, Highness ensures that the story of the Tokelands remains vivid, engaging, and unforgettable.

WHERE WE FIT IN

3

Crypto + Community
=
Degens

This intersection unleashes the full potential of decentralized collaboration. Crypto enables community members to form DAOs, pool resources, and create private, secure networks. It's about blending the power of crypto with social interaction, giving members tools to govern, grow, and vibe together—all while respecting privacy. Whether it's pooling funds for a new project or creating governance structures that actually work, it's the ultimate playground for the Web3-savvy.

Cannabis + Community
=
Stoners

This intersection brings people together around their shared love for cannabis. It's about creating spaces for education, events, and networking, where members can share experiences, bond over common interests, and celebrate the growth of the cannabis industry. Whether it's cannabis-related NFTs, exclusive events, or wellness programs, this community thrives on connection and creativity.

Cannabis + Crypto = Green Market

This is where the financial evolution of cannabis happens. Blockchain brings tokenization, digital payments, and transparency to the table, making it easier than ever to invest in cannabis ventures, tokenize products, and enable crypto payments for dispensaries. Think investment platforms, decentralized supply chains, and dispensaries accepting Toke Tokens for your favorite green goods. It's high time the cannabis market went digital

HINDERENCES

REGULATIONS

Seeing as it's generally non-tokers who make laws regarding toking legality – it's no wonder most things cannabis related are highly regulated. And of course, little needs to be said about the tax man and his grubby little fingers – always eager to take another's tokes.

It's worth noting at this point that although cannabis is a naturally important aspect of the project, The Tokelands has no relation to physical cannabis in any way at this point, which means the only regularities of concern are those regarding crypto investments in each Tokers own Country

TECH

Building an ecosystem as ambitious as ours is no tokes in the park. It's more like organizing an office-scale hotbox session while the boss is away at the golf course—it needs teamwork, innovation, and careful decision-making but will undoubtedly be worth it!

Thanks to advancements in Web3 tools, blockchain frameworks, and user-friendly platforms, we're fast-tracking the development of the Tokelands ecosystem. From seamless token integrations to immersive Metaverse experiences, the tools we need are no longer theoretical—they're here and getting better every day. With the right tech and a clear vision, we're blazing a trail toward a fully operational, innovative Tokelands.

COMPETITION

Naturally, when you're dealing with something as cool as cannabis, crypto, and community, it's bound to attract a crowd. Other projects are stepping up, eager to showcase their *high-deas* and make their mark. From weed-related memecoins to NFT-backed weed farms, the space has already shown some interesting developments

While we respect healthy competition and cheer on innovation, we recognize that The Tokelands is more than just a product, it's a culture, and while the former may be exactly replicated the latter takes on a life of its own. That being said, The Tokelands is as ambitious as it is novel. By seamlessly blending narrative storytelling, merchandise, cannabis, crypto, and more into one epic, immersive experience, we're crafting something truly irreplicable.

HINDERENCES

5

VOLATILITY

Let's face it—crypto markets can be more unpredictable than the strain you bought at the gas station parking lot. Much like one's first Toke, some are reluctant to try and others are left feeling paranoid.

At The Tokelands, we embrace this rollercoaster because it's rooted in our belief that blockchain is the inevitable future of finance, as we understand that it's not simply the case that crypto is rising, but that fiat is sinking. Crypto is the future – and this future is now.

EDUCATION

For newcomers, terms like DAO, NFT, Staking, and Gas Fees can leave them feeling like they're trying to light a toke in the rain. And, of course, if members are to fully interact within the Tokelands ecosystem, there's no way around it—they'll need to know certain basics.

Enter *Toker Tips*, our educational initiative to make Web3 basics as easy to grasp as toking on a pre-roll. With fun, digestible guides and interactive resources, we'll empower our community to confidently navigate blockchain, NFTs, and the Metaverse, turning confusion into connection.

FRAGMENTATION

Cannabis enthusiasts, crypto pioneers, and creative dreamers are all out there, but collecting them all in one place can be harder than gathering the kief at the bottom of your grinder. Without a shared space, these communities miss the chance to spark up the joint adventure of a lifetime.

By merging cannabis culture, crypto innovation, and community-driven collaboration into one vibrant hub, The Tokelands bridges these gaps and sparks connections. Whether through our sticker slap competitions, collaborative projects, or shared missions, The Tokelands ensures there's space for everyone in our puff circle.

THE TOKELANDS ROADMAP

6

THE TOKELANDS

The Tokelands ecosystem is where the magic happens—a vibrant Web3 hub featuring a marketplace, events centre, and themed experience lounges designed for connection and creativity.

THE TOKERS

Tokers NFTs are exclusive *high-dentification* cards—unlocking access to perks, events, and the heart of the Tokelands.

THE HIGH CLUB

A core team of Tokers dedicated to growing the puff circle and keeping the joint lit—ensuring that no single Toker takes all the tokes.

THE TOKE TENT

The Toke Tent is our virtual lounge, where socializing, immersive experiences, and creative collaborations come to life.

THE TOKE TOKEN

Toke Tokens are the lifeblood of the Tokelands economy, fuelling every trade, perk, and decision—making sure the vibes flow freely and no one hogs the stash.

THE HIGH-DEA

Every great adventure starts with a spark—which for us was the desire to unite cannabis, crypto, and community into something truly unique. An important first step in helping us blaze a trail into The Tokelands

i - THE HIGHNESS CLUB DAO

WHAT?

THE HIGHNESS CLUB (T.H.C)

is a

Decentralized

Anonymous Organization,

comparable to a group who come together to roll out the perfect blunt. One member has the stash, another brings the rolling gear, and someone else has the lighter.

Not only is each element essential, but the *joint* effort makes it that much sweeter.

The DAO is the paper that holds it all together and applies this same collaborative energy to the governance of the project through the minting of 42.0 unique NFTs that represent T.H.C membership. Each NFT grants its holder a voice in key decisions, from cultivating partnerships to *rolling out* new platform features, ensuring the Tokelands thrives while remaining *grassroots*.

To guide the project effectively, T.H.C's structure ensures that decisions are made efficiently, inclusively, and with the future in mind. Limiting membership to 42.0 stakeholders creates a streamlined governance model that balances creativity with accountability. Some of the benefits include:

- Focused Leadership
- Shared Ownership
- Aligned Interests
- Controlled Growth
- Communal Input

This model allows for a tightly knit, motivated team that ensures the Tokelands remains dynamic, innovative, and aligned with the community's vision.

WHY?

HOW?

How it works:

- 42.0 Highness NFT's are minted and retained by the *Stash Box* (treasury)
- 20 NFTs are released in staggered sales to early investors, with the treasury retaining majority ownership (22) to establish a long-term reinvestment mechanism
- All Highness-related revenue streams—including merchandise sales or account monetization, etc. —are periodically, distributed between T.H.C wallets

This facilitates steady growth and allows team members and stakeholders to receive income directly tied to revenue generated by the project without relying on Toke Token sales, preserving the token's value and utility.

By aligning leadership, ownership, and incentives, The Highness Club establishes the backbone of the Tokelands— with its governance and funding framework firmly in place, the Tokelands are primed for the next major milestone:

The Toke Token.

Each Highness NFT comes pre-allocated with a percentage of Toke Tokens (TOKES), which will be distributed to members upon the first purchase at launch. This ensures the treasury retains initial control through majority ownership of Highness NFTs, and that the OG Tokers - those who've shared our vision from the very earliest stages are offered the opportunity to become our first investors.

NEXT?

ii - THE TOKE TOKEN

8

WHAT?

TOKE TOKENS (TOKES)

are the **native cryptocurrency** of the Tokelands ecosystem, and much like a grinder in the rolling process—they keep everything turning, breaking down complexities into digestible chunks.

Whether purchasing exclusive NFTs, snagging merchandise, or gaining token-gated access to premium experiences, TOKES ensure that all Tokelands transactions are powered by a unified and seamless currency.

Each transaction strengthens the ecosystem, fuelling its growth and helping to keep the Tokelands blazing.

To establish the tech and economic framework needed for long-term success, the integration of TOKES is vital as:

- A native token enables transactional tax income generation for the Stash Box within the ecosystem. This applies both while on the bonding curve during the fair launch, and once the project transitions from the launchpad to a DEX.
- The debut of the project through the first-ever omnichain launchpad—Memetropolis, the Toke Token ensures broad accessibility, allowing speculators to participate in the ecosystem even if they aren't T.H.C members

The exclusive use of TOKES ensures that every transaction contributes to the ecosystem.

HOW?

How it works:

- The Toke Token launches on Memetropolis, with the first purchase from the Stash Box constituting a 20% total supply, pre-allocated for distribution across Highness NFT's
- During the fair launch, the token follows a bonding curve model that applies transactional taxes sent to the Stash Box, allowing the project to generate a re-investment mechanism.
- Once the bonding curve is complete, liquidity will migrate from Memetropolis to a decentralized exchange (DEX) with a minor sell tax applied to fuel the Stash Box.

This rollout promotes fairness and transparency, as we establish the economic engine that powers the Tokelands.

With the Toke Token fuelling the ecosystem, the Tokelands is primed for its next major milestone:
The Tokers ONFTs.

These NFTs will be purchasable exclusively using TOKES, ensuring that the native currency remains central to the ecosystem.

To reward early adopters, non-Highness holders who've held TOKES the longest will gain priority access to minting, offering a unique incentive for loyalty and active participation.

WHY?

NEXT?

iii - THE TOKERS

WHAT?

THE TOKERS (Omnichain-NFT's)

are our very own **high-dentification cards** designed exclusively for *The Tokelands*, and just as a filter refines and channels the smoke for a smooth hit, Tokers ONFTs refine access to the Tokelands, ensuring only true members enjoy its greatest perks.

The Tokers NFTs filter out non-members while providing holders with a unique, customizable gateway into the vibrant world of The Tokelands.

Using a first-of-its-kind Wardrobe Mint Mechanism, members will be able to design their Toker with traits that carry inherent rarity, meaning early adopters have wider options regarding both customizability and trait rarity.

The Tokers ONFTs are vital to the foundation of the Tokelands as:

- They define access to the ecosystem, ensuring only holders—those truly invested—gain entry to its most exclusive perks and rewards.
- Through our innovative Wardrobe Mint Mechanism, members can design their high-dentity in the Tokelands, selecting traits tied to rarity and lore. Early adopters benefit from enhanced customizability and unlock exclusive options.
- Tokers ONFTs are dynamic and will grow with the ecosystem, offering morphed upgrades, generational perks, and an ever-expanding link to the Tokelands universe.

By serving as both access keys and evolving assets, the Tokers ONFTs ensure all member roles in the Tokelands are impactful.

HOW?

How it works:

- Tokers ONFTs allow for customization through a first-of-its-kind wardrobe mint, where users can select traits and assets that directly influence rarity, with options becoming scarcer with each mint.
- A periodic morphing mechanism ensures that with every new generation of Tokers, earlier NFTs maintain their generational traits, with their scarcity increasing as the collection expands.
- Morphing is intrinsically tied to the milestones in The Tale of the Tokelands, meaning that as the narrative unfolds, new traits and assets emerge, embedding each NFT's evolution directly into the ongoing story and deepening the connection between lore and community.

Now that the Toke Tokens have fully integrated into the ecosystem, we are ready for **The Toke Tent**.

The Toke Tent evolves into the central hub of the Tokelands, now opening its doors to the public as the story reaches its climax.

While members will continue to enjoy free access, puff-passes and toke-tickets will allow limited entry to nonmember individuals and businesses as the lounge blossoms into an interactive Web3 economy.

WHY?

NEXT?

IV - THE TOKE TENT

10

WHAT?

THE TOKE TENT (Metaverse Lounge)

is a
V.R Tokelands Community Hub
that symbolizes the most essential element in the joint rolling process—the glorious green itself.

This is where everything comes together, serving as the central point of engagement for the Tokelands community, and features; themed rooms inspired by our narrative, community-curated hangout zones, and custom game rooms.

With free access for all ONFT holders, the Toke Tent fosters inclusivity, while TOKES fuel rewards, transactions, and exclusive merchandise.

The Toke Tent is the heart of the Tokelands:

- It serves as the hub for immersive engagement, utilizing the Metaverse to connect members with themed rooms, hangout zones, and games tied directly to the evolving Tokelands narrative.
- The exclusive use of TOKES, powers a seamless economy for rewards, transactions, and exclusive features, reinforcing the currency's utility and value.
- The Toke Tent unites the DAO's governance, TOKES transactional economy and the Tokers ONFTs' access gating framework

This ensures the Toke Tent is not just a VR lounge but a fully realized ecosystem hub, bringing the Tokelands vision to life.

HOW?

How it works:

- The Toke Tent opens as a VR lounge exclusively to Tokers, offering free entry to immersive themed rooms, community-curated hangout zones, and game spaces.
- Members enjoy evolving narrative-driven rooms, competitive games, and curated spaces designed to encourage engagement, creativity, and collaboration within the ecosystem.
- TOKES are fully implemented as the primary currency, powering rewards, transactions, and access to premium features, ensuring a seamless and member-focused experience.

The Toke Tent establishes itself as a hub for immersive engagement, creativity, and community connection in the Tokelands.

With the Toke Tent established as an immersive hub for ONFT Tokers, we are gearing up for **The Tokelands**.

The Toke Tent will evolve to open its doors to non-members through the sale of *puff-passes* and *toke-tickets*, which fuel treasury growth for periodic buybacks and token burns, ensuring sustainability while preserving exclusivity for the core community.

WHY?

NEXT?

V - THE TOKELANDS

WHAT?

THE TOKELANDS (Web3 Ecosystem)

is a

VR marketplace, events hub, and community centre

that integrates all previous components, to roll out the ultimate joint for the ultimate high.

It symbolizes the completion of the Tokelands ecosystem, offering a seamless Web3 platform for immersive interaction and decentralized commerce.

It opens to a wider audience, creating opportunities for engagement through puff-passes and toke-tickets while maintaining exclusivity for members.

The Tokelands advances the Toke Tent by evolving from a members-only Metaverse lounge to a dynamic hub for both members and non-members. This expansion enhances community engagement and revenue potential through:

- Puff-passes and toke-tickets allow broader participation while preserving member exclusivity.
- All transactions use TOKES, creating sustainable revenue and fueling ecosystem growth.
- Opening to a wider audience fosters inclusivity while showcasing the Tokelands' immersive experiences.
- Stakeholders retain priority access, unique rewards, and influence over governance decisions.

HOW?

How it works:

- Puff-passes and toke-tickets allow non-members to access events, trade in the marketplace, and participate in curated activities.
- TOKES are the primary currency, with transactional taxes supporting the Stash Box for reinvestment.
- Users engage in trading digital assets, attending live events, and interacting within the Tokelands, blending commerce and entertainment.
- Tokers ONFT holders gain advanced perks, governance rights, and access to premium features, ensuring that stakeholders shape the Tokelands' growth.
- Building upon the Toke Tent, the Tokelands offers a VR environment enriched with narrative-driven experiences and gamified interactions.

With the Tokelands fully realized there are no further stages— simply a joint that never stops blazing.

The Tokelands is a living, breathing ecosystem, where evolving games, immersive experiences, and partnerships ensure the story and culture continue to thrive.

With ambitions like an animated narrative and fresh collaborations, this is a joint that never burns out. Now, it's time for members to light up, enjoy, and reach Highness together.

WHY?

TOKENOMICS: DISTRIBUTION

12

With the formation of T.H.C DAO complete, the foundation is set, and it's time for lift-off!

TOKES are launched via the Memetropolis Omnichain Launchpad, which enables the creation of multiple liquidity pools across various popular chains—why stick to a single token when you could have multiple strains?

To keep it both simple and fair, we've opted for:

- **42%** purchased by [The Highness Club](#), and split between DAO members and the Stash Box, ensuring both community rewards and a reserve for future growth.
- **58%** is available for [public purchase](#), inviting widespread participation and engagement in the ecosystem.

After launch, The Journey begins as TOKES initiate their escape from the bonding curve, a dynamic pricing mechanism that ties token value to demand.

With each purchase, the price increases along a predefined curve, allowing supply and price to grow together stably. Early adopters benefit from lower entry costs, while later participants contribute to strengthening the ecosystem, fostering fair and sustainable growth for all.

During this phase, transactional taxes and ecosystem revenues—from merchandise sales and affiliates—flow into the Stash Box, funding development, marketing, and community initiatives. As participation grows, TOKES solidify their role as the unifying currency of Tokelands, laying the foundation for long-term growth.

After their time on the bonding curve, where price was dynamically tied to demand, TOKES transition to a traditional liquidity model on a **DEX** (Decentralized Exchange).

On the DEX, tokens are freely traded, with the price determined by market dynamics rather than predefined mechanisms—a shift that marks the token's evolution into a fully integrated and community-driven digital asset.

Much like during its time on the curve, transactions of TOKES on the DEX continue to generate funds directed toward the Stash Box, ensuring resources are available for ongoing development, marketing, and the sustained growth of the ecosystem.

TOKENOMICS: STASH BOX

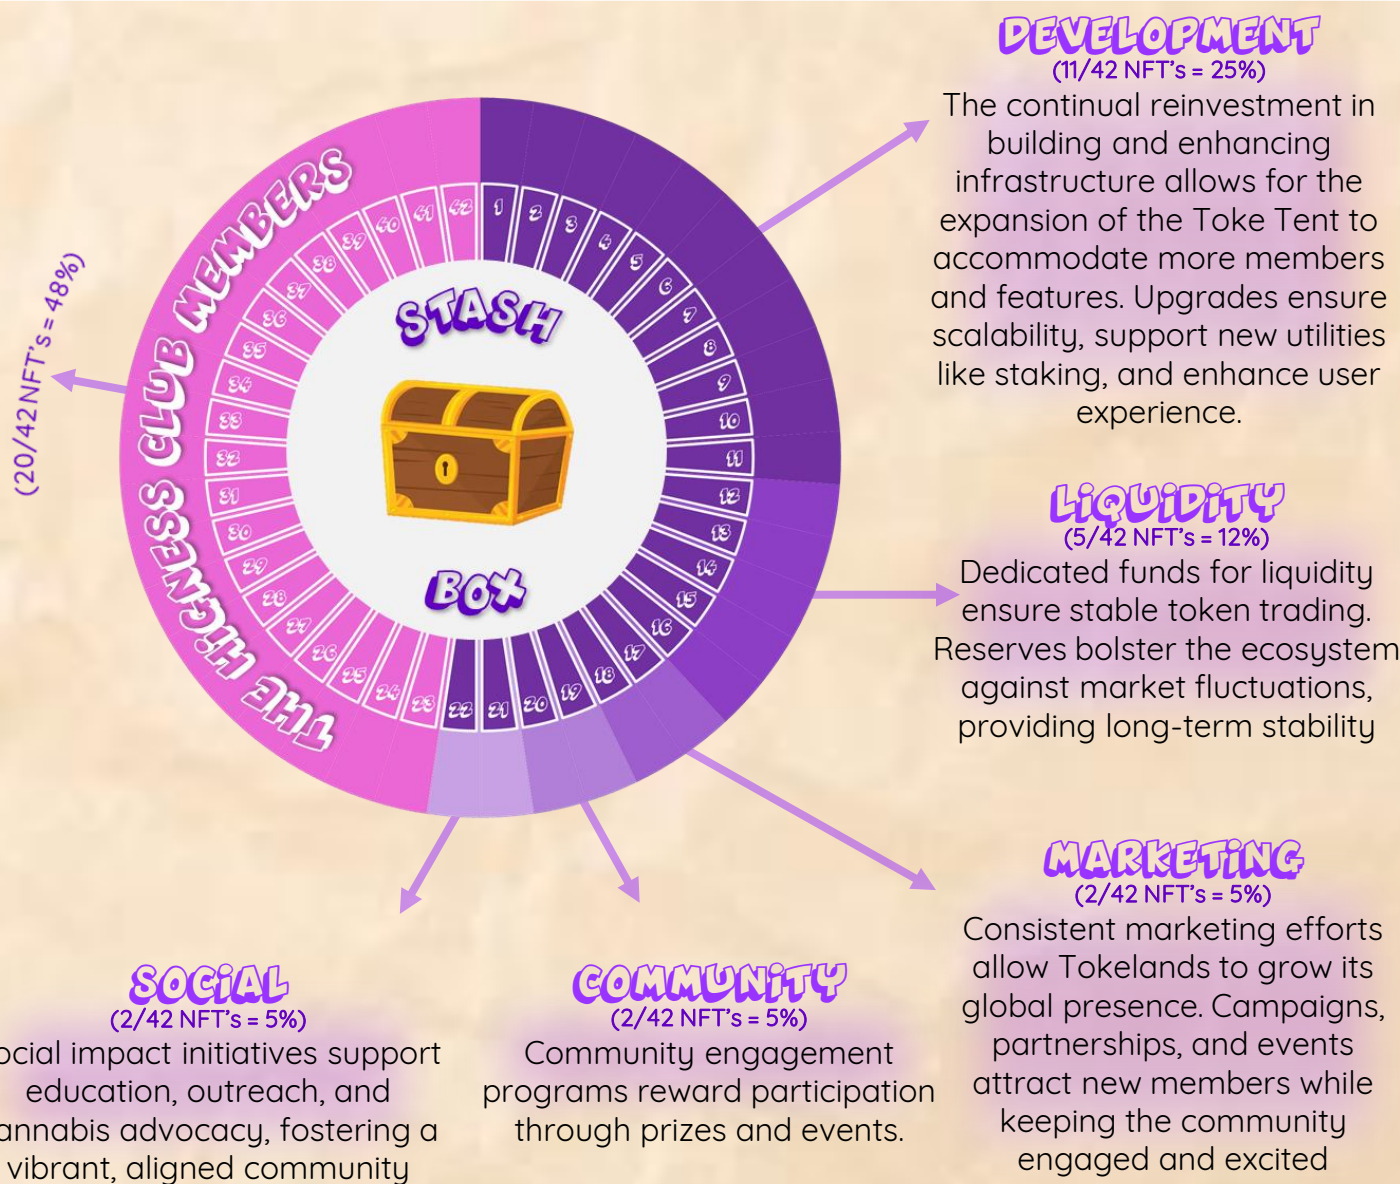

13

The Stash Box is primarily funded through project-related income such as IRL product (toke paper), upcoming IRL and digital merch, partnerships and taxes generated through transactions of TOKES on the DEX, generating a steady stream of resources. Every transaction contributes a portion of funds to the Stash Box, creating a reliable and ongoing pool of resources to support the ecosystem.

Funds in the Stash Box are strategically allocated across six key areas to support the growth and sustainability of Tokelands. These include governance through the T.H.C DAO for decentralized decision-making, development of features and infrastructure, marketing to drive adoption, liquidity to ensure trading stability, community engagement to reward and incentivize participation, and social initiatives that align with the project's values and create meaningful impact.

To further engage the community, Tokelands employs the Toke Tracker, a custom smart contract mechanism. The Toke Tracker uses on-chain analysis to evaluate wallet activity and assign scores based on criteria like the duration of TOKES held, transaction frequency, or other contributions. Wallets meeting or exceeding a specific score, such as 420, qualify for bud-drops, periodic rewards funded by the Stash Box.

The Stash Box is the lifeblood of the Tokelands ecosystem, ensuring that all generated funds are reinvested to foster growth, stability, and meaningful impact. By integrating mechanisms like the Toke Tracker, Tokelands aligns incentives with community engagement and participation, creating a sustainable, community-driven environment that thrives on collaboration and shared success.
