Agenda Overview

This training module is designed for the experienced GT-SUITE users from corporate and individual engineers who are interested to prepare Fast Running Model (FRM) and Mean Value Engine Model (MVEM) in GT-SUITE. These FRM & MVEM plant models are used for real time (RT) simulation in SiL & HiL for various purposes such as ECU development & calibration, thermal management, vehicle performance, fuel economy & drivability, aftertreatment, transmission shift quality, durability. Detailed training agenda is mentioned below.

□ FRM & MVEM

- ✓ Why FRM and MVEM; and their applications
- ✓ Conversion of a detailed GT-POWER engine model into an FRM (controllers included)
- ✓ Neural network approach
- ✓ Conversion of a detailed GT-POWER engine model into a MVEM (controllers included)
- ✓ Calibration techniques for both FRM & MVEM
- ✓ Heat transfer consideration
- ✓ Transient simulation
- ✓ Application of the same concepts for different sub-systems such as engine, cooling, vehicle drivetrain, etc
- ✓ Post-processing using GT-POST
- ✓ Input and output signals transfer validation Simulink

Who Should Attend?

- Working professionals/ planning to build plant model for real time (RT) simulation of different sub-system like engine, cooling, vehicle drivetrain, HVAC, etc
- OEMs/ Consulting Companies/ Start-ups
- Engineering Students/ Professors/ Scholars

Trainer

- Over 19 years of industrial experience in diesel, gasoline, gas engines; HEV & EV; and aircraft engines
- 1D simulation domain – engine performance, cooling, HVAC, HEV & EV drivetrain, battery, lubrication, acoustics, hydraulics, cranktrain, and valvetrain
- Worked with GE, Cummins, ESI, MTU (Rolls-Royce), IST
- Conducting training for 10 years
- GT-SUITE user for 14 years
- M.Tech. from IIT Kharagpur
