

## Economic development

MN-S *does not* have an economic plan suited for sustainability or growth. Commercial harvesting at the current rate is going to continue to deplete the resources until there is very little left. We need to start focusing on other avenues for economic development in order secure sound employment opportunities for the citizen's Métis nation.

In my platform as an independent candidate for the 2024 provincial election for Cumberland, I proposed supporting start-ups in non-profits as a way for bringing more equality and equity to the people and their communities in northern Saskatchewan.

- Commercial greenhouse network
- Investments in to clean energy
- Push the boundaries of the agricultural sector in north-central Saskatchewan.

We have to start making the right investments now by raising Métis nations equity and increasing the flow of funds into planning preparation for the future.
