On Board Video and Integrated Sound
10/100/1000 Ethernet
104-Key Keyboard and Optical Scroll Mouse
6 USB Port, 1 HDMI Port
Microsoft Windows 10 Home 64-Bit
One Year Warranty
ONLY \$625

DID YOU KNOW?

The First Computer Weighed More Than 27 Tons-

The name was ENIAC, and it took up a modest 1800 square feet of space.

About 90% of the World's Currency Only Exists on Computers- This

means only about 10% of the global currency is actually

The First Computer Mouse was Made of Wood- Doug Engelbart

invented it in 1964.

Don't Forget the Optional Updates

Most people know about running Windows Update, which protects their machines by installing recent updates to the Windows operating system and hardware to fix security vulnerabilities. People may have their machines set to automatically download and install critical updates as a background process.

What many people don't know is that when manually running Windows Update, there is a subsection of the process that reveals non-critical "optional updates." These include updates to devices like the video card, sound card, and Ethernet card.

If you go into Control Panel, run Windows Update, and pick the "check for updates" option, your computer will connect to Microsoft to reveal updates that are available, placing the critical or important ones front and center. After installing those and restarting the machine, run Windows Update again and look for the "optional updates" link.

There you'll see a list of items that although not deemed critical, can be of benefit to the user if it improves the performance of your hardware devices.

Click the checkbox next to available updates and run the installer for those. You may find that the screen may flicker when installing new video card drivers. In the case of wireless or Ethernet adapter updates, the system may lose connectivity briefly before re-connecting.

Check to see what new drivers may be available for your system.
