AgriPro

Agronomics

Straw Strength	Very Good to Excellent
----------------	------------------------

Relative Maturity	Medium Early
-------------------	--------------

Plant Height	Medium
--------------	--------

Winter Hardiness	Very Good
------------------	-----------

Grain

Head Type	Awned
-----------	-------

Chaff Color	White
-------------	-------

Test Weight	Excellent
-------------	-----------

Yield	Excellent
-------	-----------

Area of adaptation.

These agronomic assessments are made by Syngenta scientists and reflect each variety's relative performance within these characteristics prior to and during the 2023 crop year. Specific conditions may cause variations within those characteristics. These relative protection values are based on current pest and disease populations. These have been known to shift periodically and may cause changes in specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies. This chart is updated annually to reflect the most current trends.

One or all of the varieties may be protected under one or more of the following: Plant Variety Protection, United States Plant Patents and/or Utility Patents and may not be propagated or reproduced without authorization.
