

**YOUR LIKELY SCENARIO**

- ◇ As a Maintenance Manager you manage 1000s of assets and need to be updated on their most current status.
- ◇ As a field engineer you need to interact with your assets - extract historical data, obtain asset information, perform update functions, on-the-spot.
- ◇ As an Ops manager, you may or may not have legacy systems - ERP, CMMS, etc but take time to obtain relevant information immediately when required.
- ◇ As a General Manager you would like the latest status of your assets on your smartphone - their condition, book value etc.
- ◇ You have a document based activity capture system, excel updates checklists, forms, reports.
- ◇ You capture maintenance activities on excel after the action is performed and most of the information is forgotten on the way.
- ◇ You would like to take photographic record of your activity but these need to be correlated with your reports off-line.

**INNOVATIVE CLOUD-BASED INSTANT ASSET INFORMATION RETRIEVAL AND ON-THE-SPOT UPDATE SYSTEM.**

**BUSINESS PROBLEM**

- ◆ 10s of distributed legacy systems, 1000s of Assets but no central integration of data.
- ◆ Book value, depreciation, maintenance status information of your assets are not easily available from a single point.
- ◆ Audit reconciliation of assets are always difficult.
- ◆ Lack of Location history audit trail, lost assets, duplication of assets.
- ◆ Repair history, repaired parts, historical repair status update information are in separate silos.
- ◆ Lost hours and \$\$ on motion wastage in offline access to extract and update excel systems.
- ◆ Asset maintenance is a human dependent activity.
- ◆ Alerts on critical date events (calibration, testing due dates) are unavailable.

**YOUR BENEFITS**

- ◇ Simple and inexpensive way to eliminate all kinds of asset related motion-wastage
- ◇ A "Non-IT" person can manage and maintain this paperless, 'green', cloud-based, powerful, asset status and information system,
- ◇ Centralised asset DB can be accessed from anywhere, anytime by authorised users.

**TRAK-iT REQUIREMENTS**

Mobile | Tablet | PC

Internet Access

**SOLUTION**

- ◇ Scan, access, view, update, save—that's it! All you need is your smartphone to perform 90% of the functions.
- ◇ QR Code based, paperless, asset Information instant extraction and status update system.
- ◇ Cloud-based, Mobile and/or PC access, Data always available, on-demand.
- ◇ Status updates in multimedia format - text, forms, picture, audio, voice to text.
- ◇ Seamless import & export of your existing asset data in excel format - no need to retype all the information.
- ◇ Strong security & Access controls. Geo-location function, Alerts on date events
- ◇ Multi-user, unlimited asset DB.
- ◇ Book value calculation, depreciation, maintenance status information of your assets are not easily available from a single point
