

## Carbon Emissions Summary (Scope 1, 2 & 3)

This document outlines the carbon emissions associated with the operations of The Budget Wedding Company. The business operates from home, reuses décor items across multiple weddings, and uses a single diesel vehicle for deliveries and collections.

Scope	Source	Annual Emissions (kg CO <sub>2</sub> e)
Scope 1	Vehicle travel (diesel, 2,761.6 miles)	828
Scope 2	Home storage electricity	51
Total (Scopes 1 & 2)		879 (0.88 tonnes)

### Scope 3 (Other Indirect Emissions)

Scope 3 emissions are indirect emissions that occur as a result of activities not directly owned or controlled by the business. For The Budget Wedding Company, these may include guest travel, venue energy use, and supplier manufacturing. Due to the small scale and home-based nature of the business, Scope 3 emissions are not currently measured. The business focuses on reducing direct emissions through reuse of décor items, minimising transport distances, and working with local venues where possible.

### Carbon Reduction Plan

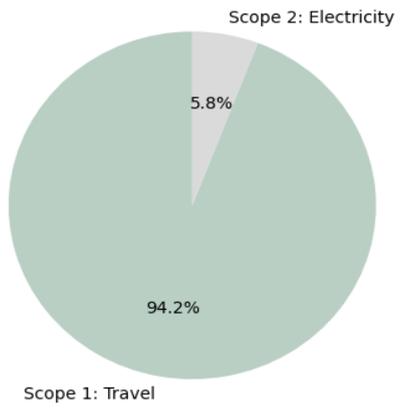

- Delivery distances capped at a maximum 50-mile round trip per wedding
- Annual weddings capped at 35
- Local and geographically clustered bookings prioritised
- Deliveries and collections grouped where possible

### Our Commitment

The Budget Wedding Company is committed to operating responsibly and transparently. By focusing on local weddings, reusing décor items, and actively managing travel distances, the business aims to continually reduce its environmental impact while providing beautiful, accessible wedding styling for couples.

*This carbon emissions summary and reduction plan is reviewed annually and updated as business operations evolve.*
