--

**Interpretation**

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.43.  
 OA Risk Category: The DI is between 0.31 and 0.49. This patient is at mild risk for hip OA.  
 Distraction Index Chart:

**SOUTH AFRICAN BOERBOEL MASTIFF**

**BREED STATISTICS:** This interpretation is based on a cross-section of 1629 canine patients of the SOUTH AFRICAN BOERBOEL MASTIFF breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.30 - 0.75) for the breed. The breed average DI is 0.51 (solid square). The patient DI is the solid circle (0.43).

**SUMMARY:** The degree of laxity (DI = 0.43) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a mild risk to develop hip OA. No radiographic evidence of OA for either hip.
