

CECILIA ROSIN COLLECTION

	Signature Formula	SOLO	A Piacere	Sanctus
Description	This rosin is the most significant new development for the most demanding musicians that works well with a small amount on a wide range of repertoire. It helps the bow to create rich, full and expressive tones without excessive bite.	The formula focuses on providing maximum projection as well as clear articulation. It is also forgiving under high bow pressure on the strings without the sound cracking.	Similar to SOLO in terms of providing clear articulation, but it has slightly less projection power, aiming for more blending aspects in sound. The tone is relatively warmer and rounder than the SOLO, and it goes particularly well with soft bows.	The outer ring formula gives smooth bowing experience with a focused sound on the strings, and the softer center formula kicks in when the player demands more power and gutsiness from their instrument.
Available Sizes	Full and Mini	Full and Mini	Full and Mini	Full only
Physical Hardness (1-5)	4	5 (hard)	4	Outer ring-5 / Center-3
Articulation	Strong and Rounder	Strong and Crisp	Moderate and Crisp	Moderate and Rounder
Projection	Strong	Strong	Moderate	Moderate / Strong
Tone Characteristic	Rich, Full, Warm	Powerful, Bright	Smooth, Clear	Complex, Gutsy, Textured
Workable Extreme Climate Condition*	Hot, Cold, Humid	Hot, Cold, Dry	Cold, Dry	Cold, Humid

* Generally, the humidity affects the bow hair, and the temperature affect the rosin more. It is because the strength of bow hair gets weak in high humidity weather, and the rosin gets soft in high temperature. Rosins that are workable in these possible extreme climate conditions are suggested here by learning how the bow hair may react to various extreme climate conditions and how each rosin formula's specific physical property such as hardness (softening point) and stickiness may help the bow hair cope with these climate conditions.
