Abstract

This short ebook presents details about the Reltron electromagnetic weapon. It is controlled and operated by the U.S. Space Force at Schriever Base, near Colorado Springs. There are more than 200 of these weapons in orbit, and they have a typical power output of 250 million watts. This is the weapon that causes Havana Syndrome. The constellation weapon system is a Weapon of Mass Destruction (WMD) and violates the 1967 Outer Space Treaty, and the Geneva Conventions, for targeting and attacking unarmed civilians, worldwide. These weapons also violate the 1972 Convention Treaty on Satellite Liability.

Introduction

In January of 2026, President Trump sent a Naval fleet to Venezuela to capture President Maduro. Maduro had allegedly been involved with election interference against the U.S. as well as drug trafficking.

Guards at the Presidential palace were immediately overwhelmed by a new weapon that Trump refers to as, the “Discombobulator.” It results in immediate incapacitation, vomiting, and nose bleeds. The guards collapsed and became an easy target for the invading force.

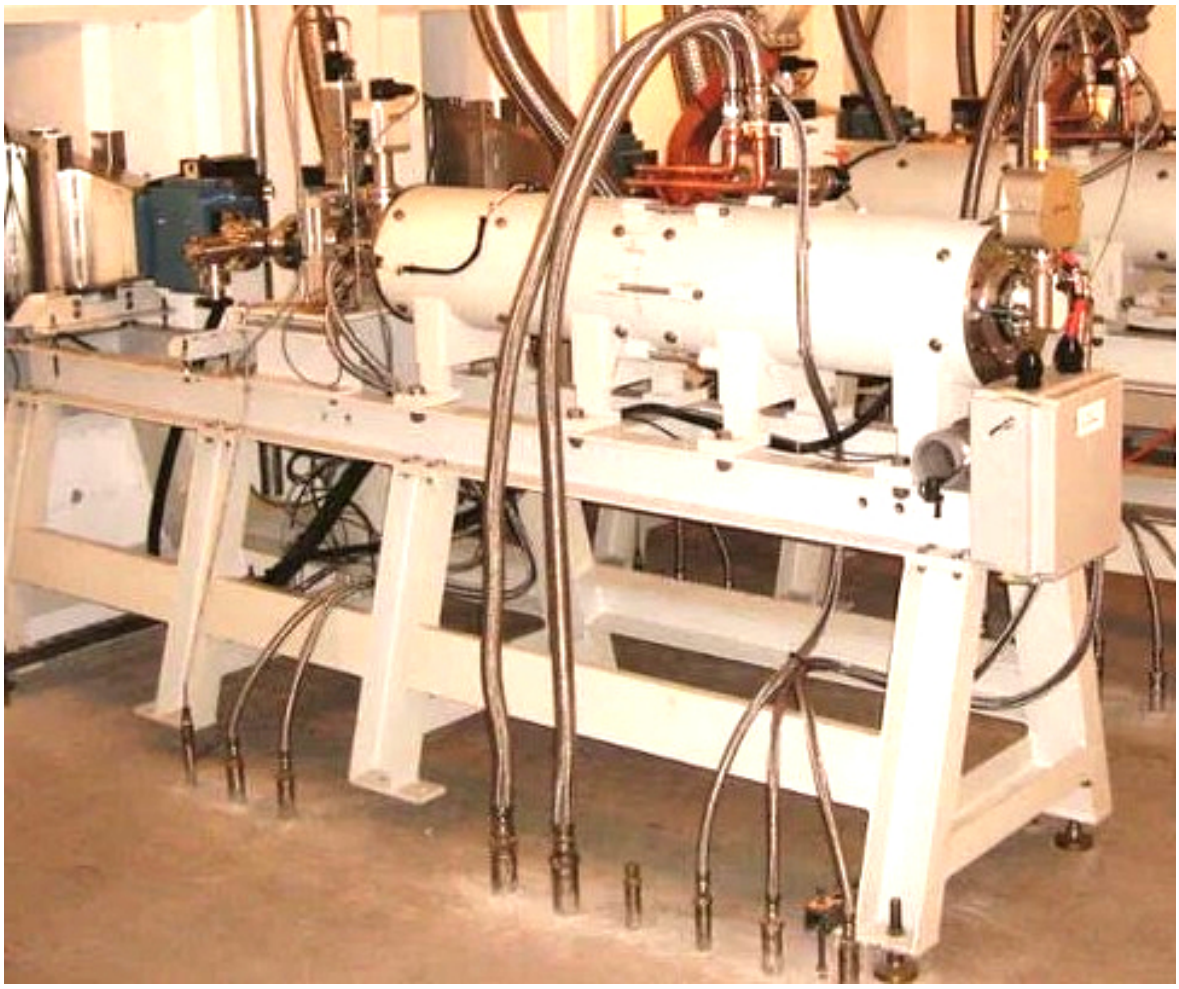

So what is this secret weapon, and how does it work? We provide some of the details here.

The weapon is called a Reltron. Developed under U.S. Patent 4345220, and manufactured at the same facility for more than 30 years: Fisica Applied Technologies, 2700 Merced St, San Leandro, CA [Fisica.com]

It is not made in Russia or China, although those governments may have similar technology, the U.S. developed the first prototypes in the late 1970’s and early 1980’s, long before other governments possessed this technology.

It is important that exposure continues to destroy the C1A narrative – that somehow the Russians are behind the Havana Syndrome attacks on U.S. diplomats and civilians. It is simply another false flag from the C1A criminals. Targeted Justice has previously covered the reasons we can demonstrate that the Russians are not behind it.

https://targetedjustice.substack.com/p/dew-is-it-china-or-russia-or-us-fb1?

Reltron on a test stand, for performance testing.

Chapter 1
The Reltron is Trump's Secret Weapon

Trump's Secret Weapon!
The Reltron:
The Weapon that causes Havana Syndrome

- This is Trump's "Discombobulator" - used on guards in Venezuela.
- Operated by US Space Force from Schriever Base: 200+ in orbit
- U.S. Patent 4,345,220 - rated at 250 million watts of power.
- Manufactured by: Fisica Applied Technologies
  2700 Merced Street
  San Leandro, California (Fisica.com)

These Weapons are Attacking U.S. Civilians!

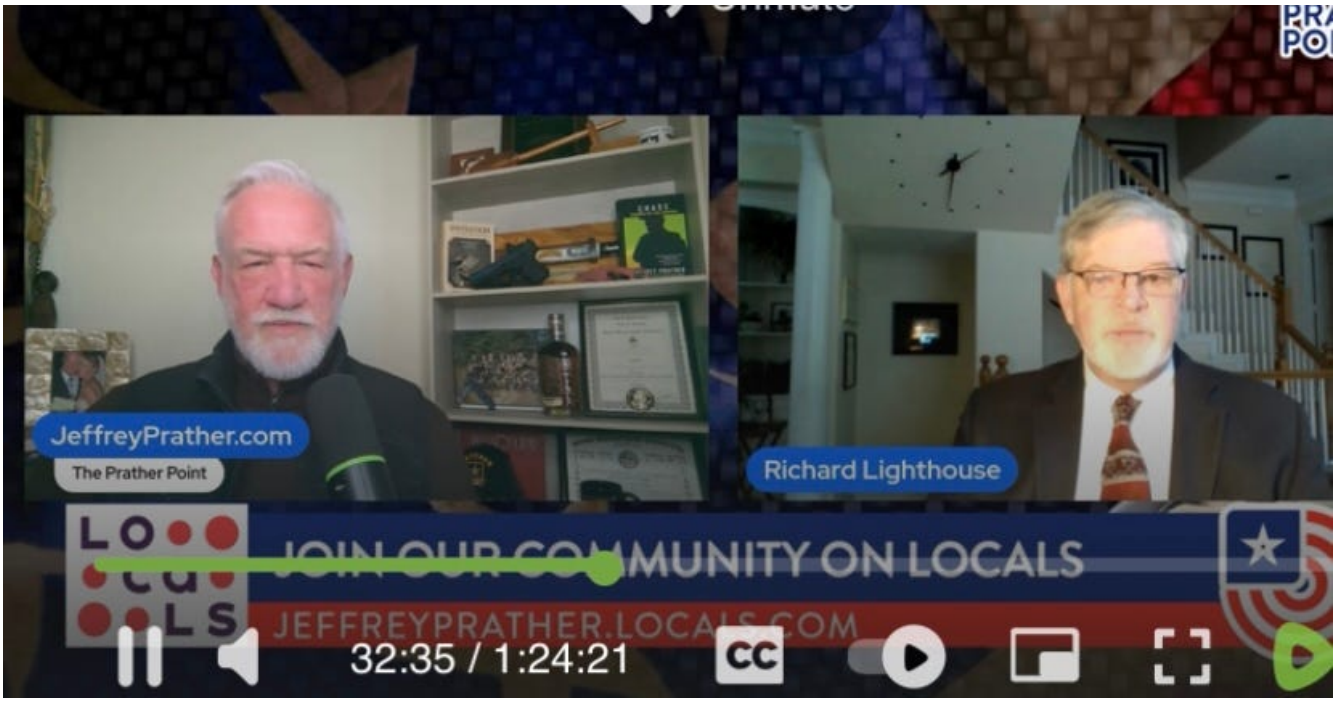

https://rumble.com/v74p354-exclusive-secret-sonic-weapon-truth.html

TargetedJustice.com

This system of 200+ weapons is a Weapon of Mass Destruction (WMD), and violates the 1967 Outer Space Treaty, and the Geneva Conventions by targeting and attacking unarmed civilians.

Here's the video interview with Major Jeffrey Prather:

https://rumble.com/v74p354-exclusive-secret-sonic-weapon-truth.html

Major Prather interviews Richard Lighthouse about the satellite weapons used in Venezuela. Interview starts at 30 minutes. Much thanks to Major Prather, who sits on the Targeted Justice Advisory Board.

Chapter 2
Trump talks about the “Discombobulator”

Video - Trump on the “Discombobulator”

Skip to 39:00 minutes
https://www.youtube.com/watch?v=L5qpkmzaRXo

Feb 4, 2026 Top Story With Tom Llamas
In an extended interview with NBC News’ Tom Llamas, President Donald Trump addresses immigration enforcement, the American economy, U.S. tensions with Iran, Joe Rogan, AI and other topics from the Oval Office.

/

On 4 February 2026, President Trump did an interview with “NBC Nightly News” anchor Tom Llamas.
https://www.thegatewaypundit.com/2026/02/must-watch-president-trump-discusses-powerful-sonic-weapon/

Llamas asked President Trump about the sonic weapon used during the Maduro capture. It is a microwave weapon, not a sonic weapon.

Venezuela reported over 100 guards and soldiers were killed in the US operation to capture Maduro.

Targeted Justice has clearly stated that the weapon is called a Reltron, and it is manufactured by Fisica Applied Technologies, 2700 Merced St, San Leandro, California.

www.Fisica.com

The Titan Corp previously reported that more than 200 of these Vircator/Reltron weapons were built between 1983 and 2005. Most of these weapons are mounted on satellites and are designed to fire a rapid pulse of microwave beam energy at a precise point on the ground. The GPS coordinates are accurate to within 1/2 inch (1 centimeter). This is how the guards were disabled.

The US Navy has EA-18G Growler aircraft that carry an Electronic Warfare (EW) pod, that also contains a Reltron, except it fires in a single large pulse that destroys electronics in radar stations and missile launchers.
*This information comes from publicly-available records.

Targeted Justice has repeatedly claimed this is the same weapon that causes Havana Syndrome, and has been used illegally on thousands of civilians, worldwide.

We have the Civilian Registry of Havana Syndrome led by Dr Len Ber, M.D. to demonstrate that civilians are being attacked.

/

Golden Dome

Targeted Justice has serious concerns that hundreds more of these torture weapons will be placed in orbit as part of the “Golden Dome.” The proposed system is a weapon of mass destruction, which is prohibited under the 1967 Outer Space Treaty. Further, it is a weapon of torture violating the Geneva Conventions, and it also violates the 1972 Convention Treaty on Satellite Liability.

/
The DEW “punching bag” attacks continue on Targeted Justice Board Member, Richard Lighthouse. The attacks cause swelling of the face, especially around the eyes. 5 February 2026, 7:53am

Grok talks about throttling the power output on a Reltron.

The Reltron can effectively have its power output adjusted or “throttled” up and down, primarily by varying key input parameters like the cathode voltage, post-acceleration voltage, and/or beam current.

From technical studies and simulations on Reltron devices:

RF output power increases significantly with higher cathode and post-acceleration voltages, up to a certain threshold where performance peaks before potential limits or saturation set in. Operating during saturation mode (over-powering the unit), causes the Reltron to emit a large amount of xrays as part of the microwave beam. The unit can be pulsed in saturation mode – and this is how the Reltron causes face and leg burns.

MICROWAVE WEAPONS ATTACK 278,000 U.S. CIVILIANS

https://www.TargetedJustice.com/microwave-burns

The CIA & US Space Force operate these weapons from Schriever Base near Colorado Springs. The FBI is involved in the cover-up.

- **These civilians are the subject of 278,000 FISA warrants. Their names illegally appear on the FBI's TSDB, as Handling Codes 3 & 4. FBI calls them "Non-Investigative Subjects." No Probable Cause. No Reasonable Suspicion. Kash Patel – where are you?**
- **They are: J6ers, Government whistleblowers, traditional Catholics, Parents at School Board meetings, Conservative voters, etc. – "Domestic Terrorists"**
- **Havana Syndrome / Anomalous Health Incidents (AHI) – many experience it.**

TargJustice@protonmail.com

TargetedJustice.com

TARGETED JUSTICE™
Bringing Justice to Targeted Individuals

For example, simulations show output power rising from ~225 MW (at lower voltages) to ~350 MW or even ~510 MW as voltages increase (e.g., cathode from 100–300 kV, post-acceleration around 750–800 kV, with fixed beam current like 750 A), with corresponding efficiency gains (e.g., 36% to 62%).

The excitation/input pulse shape (rise/hold/fall times) also influences output, where longer stable "hold" periods sustain higher power.

These adjustments allow variable power levels in practice, though Reltrons are typically optimized for pulsed high-peak operation (hundreds of MW in short pulses, e.g., nanoseconds to microseconds) rather than continuous variable throttling like some engines.

Note: This refers to the Reltron HPM tube (developed in contexts like Titan Corp. and research papers from the 1990s–2020s), not any fictional device or unrelated tech.

/

First mention of the Reltron?

In a 2016 Physics of Plasmas paper: "In 1992, reltron was first proposed by Miller et al., and experimentally demonstrated 1 and 3 GHz devices at M/S Titan Spectron, USA."

In conference proceedings and IEEE papers on super-reltron (an enhanced variant), the foundational work dates to 1992, with early results showing >400 MW at ~50% efficiency at 1 GHz.

A 1994 reference notes further demonstrations, building on the 1992 introduction.

SPIE proceedings (e.g., on advances in Reltron and Super-Reltron) describe it as invented by Titan in 1992.

The device is a post-accelerated modulated-beam microwave oscillator, using pulsed power systems for driving the electron beam.

Chapter 4

Comparing the Vircator and the Reltron

Reltron being tested after final assembly. These weapons emit X-rays and gamma rays, to the sides. That's why no one is in the room when it is operating, and the room is shielded.

/

The Vircator weapo is described in US Patent 4345220, circa 1982. The Reltron was a later development, but based on the same basic principles. A weapon similar to this image was likely used in Venezuela to disable the guards in seconds. It is mounted on a satellite and precisely controlled from Schriever Base, using GPS coordinates. The accuracy is better than 1 centimeter (about ½ inch).

/

Fisica, Inc acquired the division of L3Harris that makes the Vircator/Reltron. The company is located at 2700 Merced St, San Leandro, California.

https://www.fisica.com/ati

The ATI Division of the new company openly admits they still manufacture and sell Reltrons. This is their trademark name for a Vircator with efficiency improvements.

“In the field of high-power microwaves, we produce tunable, narrowband Reltrons™ and magnetron and ultra-wideband (UWB) short-pulse sources.”

/

How much electricity is needed? About 500,000 Volts and 1,000 Amps.

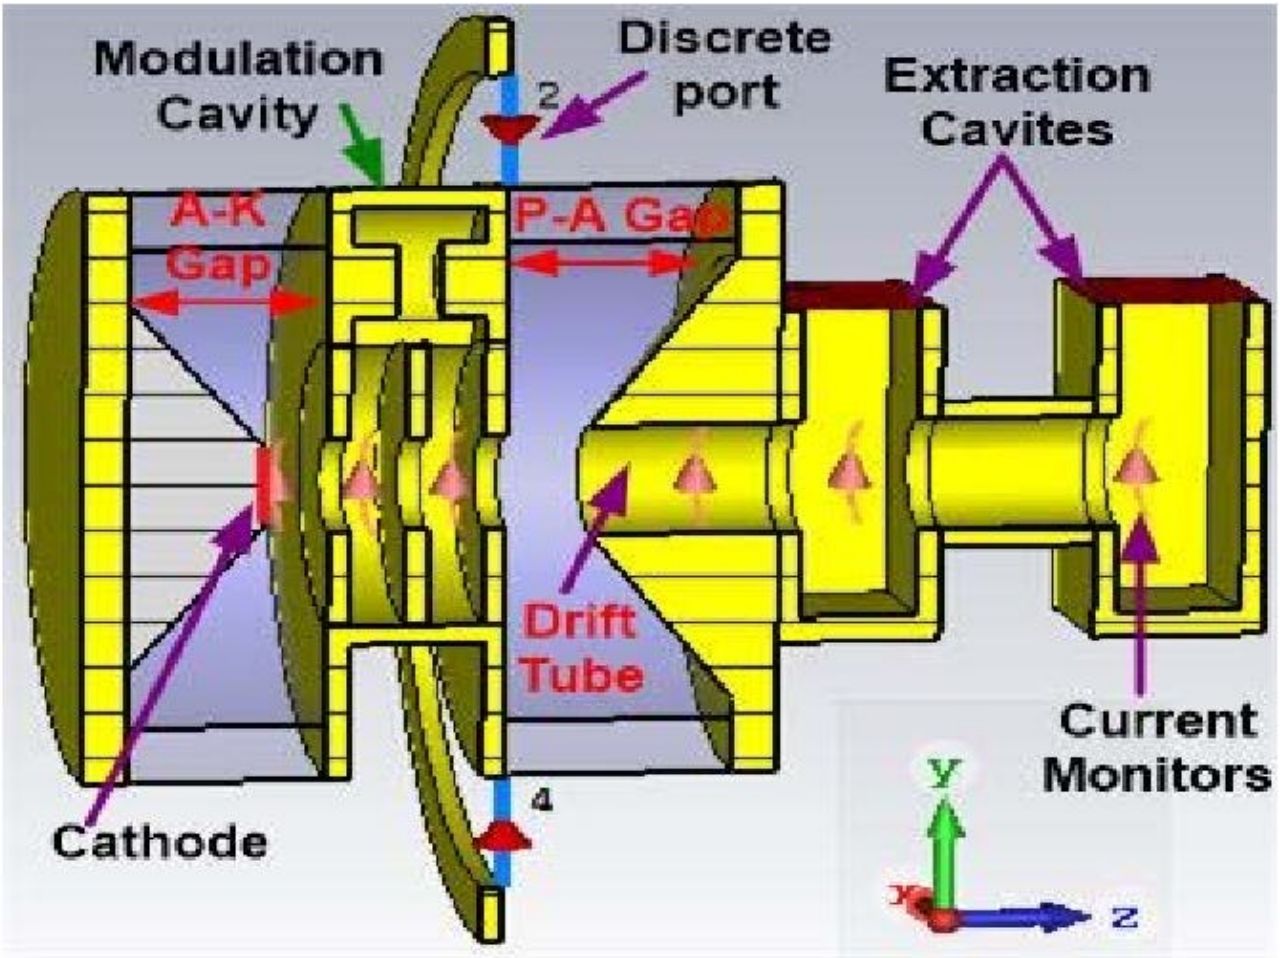

This is far more electricity than is available in any house or apartment. In fact, it is about 10,000 times more volt-amps than the typical home in the United States.

TABLE I
DESIGN SPECIFICATION FOR PROPOSED RELTRON

Particulars	Specifications
Total Tube Voltage	500 kV
Total Beam Current	1.0 kA
Main pillbox cavity radius	38.5 mm
Main pillbox cavity length	34.10 mm
Disc hole radius	10.00 mm
Coupled cavity radius	25.67 mm
Idler radius	12.84 mm
Idler length	10 mm
Anode-cathode Gap	18.75 mm
Post-Acceleration Gap	48 mm
Extractor cavity length	17.0 mm

/

/

So what's the difference?

Reltron and Vircator (short for Virtual Cathode Oscillator) are both specialized high-power microwave (HPM) sources, typically driven by intense relativistic electron beams in pulsed power systems. They generate very high peak microwave powers (often hundreds of MW to multi-GW levels) in short pulses, with applications in directed energy research, radar, and potential defense-related uses.

Here's a breakdown of the key differences:

Operating Principle

- Vircator: Relies on the spontaneous formation of a virtual cathode (a region of space charge that reflects electrons back toward the real cathode). When an intense electron beam current exceeds the space-charge limiting current in a diode (typically a reflex triode, axial, or coaxial geometry), electrons bunch and oscillate between the real and virtual cathodes. This oscillation

directly produces broadband or tunable microwaves without requiring external resonant cavities for frequency control in the basic design.

- Reltron (or Super-Reltron): A more structured, klystron-like device. It uses a side-coupled modulation cavity(often with grids or gridless variants) to strongly pre-modulate or bunch the electron beam at the input. The well-bunched beam is then post-accelerated and interacts with one or more output extraction cavities to efficiently convert beam kinetic energy into microwave energy. It behaves like an advanced relativistic klystron amplifier/oscillator with built-in strong pre-bunching.

Efficiency

- Vircator: Generally low to moderate efficiency (classically ~1–10%, with optimized or modified designs reaching 20–30% in some experiments, e.g., with reflectors or multiple virtual cathodes).
- Reltron: Significantly higher efficiency (typically 40–50%, with reports of >400 MW at ~50% efficiency in early super-reltron demonstrations; modern variants aim even higher).

Bandwidth / Frequency Control / Purity

- Vircator: Often broadband or widely tunable (frequency depends on beam voltage, current, and geometry), but output tends to be less coherent and mode-pure (mixed modes like TM_{01} + others common).
- Reltron: Narrower bandwidth, better frequency stability and mode purity due to resonant cavities (operates at well-defined cavity resonances, with variants supporting harmonic extraction, e.g., 1 GHz fundamental → 3 GHz output).

Complexity / Design

- Vircator: Extremely simple mechanically — basically a diode (cathode-anode-drift region), no magnetic field required in many configurations, very few parts, low cost, and compact.
- Reltron: More complex — includes modulation cavity (often with grids), post-acceleration region, and multiple output cavities. This added structure enables the high efficiency but increases fabrication and tuning requirements.

Power / Pulse Characteristics

Both can reach GW-class peak powers in short pulses (tens to hundreds of ns), but:

- Vircators are often favored for ultra-simple, very high peak power demonstrations.
- Reltrons excel in higher energy per pulse and better repetitive-rate potential (some designs tested at 20 Hz with long pulses).

How Power Adjustment Works

- Voltage Scaling: The Reltron operates by modulating an electron beam at a lower voltage (typically around 100-120 kV for initial modulation) and then post-accelerating it to higher voltages (e.g., 800 kV or more) to achieve high efficiency and power. Simulations show that adjusting these voltages directly scales the output power. For instance:
  - At 120 kV beam voltage and 800 kV acceleration, output is around 38 MW at ~53% efficiency.
  - Higher voltages can push peak power to 400-600 MW or more, with efficiencies of 40-50%.
  - Lowering the voltages reduces power accordingly, allowing for throttling to lower intensities without redesigning the tube.
- Other Parameters: Parametric studies indicate that power can also be influenced by adjusting beam current, magnetic field strength, cavity design, and pulse duration. For example:
  - Shorter pulses (hundreds of ns) or longer ones (up to 2 μs) affect energy per pulse, indirectly impacting effective intensity in repetitive modes (e.g., 20 Hz operation).
  - Frequency multiples (e.g., extracting at 3 GHz instead of 1 GHz) can yield lower power levels (tens of MW) from the same tube.
- Operational Context: In pulsed power systems driving the Reltron (e.g., Marx generators or modulators), the charging voltage can be dynamically set to different levels between pulses or bursts, enabling real-time throttling. This is common in HPM sources for applications like electromagnetic testing, where variable intensity is needed without hardware changes.

Limitations

While adjustable, Reltrons are optimized for specific ranges (e.g., S-band or X-band, 100 MW to 1 GW peaks), and extreme throttling might reduce efficiency or cause issues like field emission breakdown at high voltages. Super-Reltron variants, with multiple output cavities, offer more flexibility for high-power scaling but still rely on voltage/current tweaks for intensity control. Overall, the Reltron's design supports variable power operation, making it suitable for scenarios requiring adjustable intensity, unlike some fixed-output HPM sources.

researchgate.net

osti.gov

pdfs.semanticscholar.org

uodiyala.edu.iq

In short:
A vircator is a simple, rugged, but relatively inefficient HPM source that generates microwaves directly from virtual cathode oscillations.

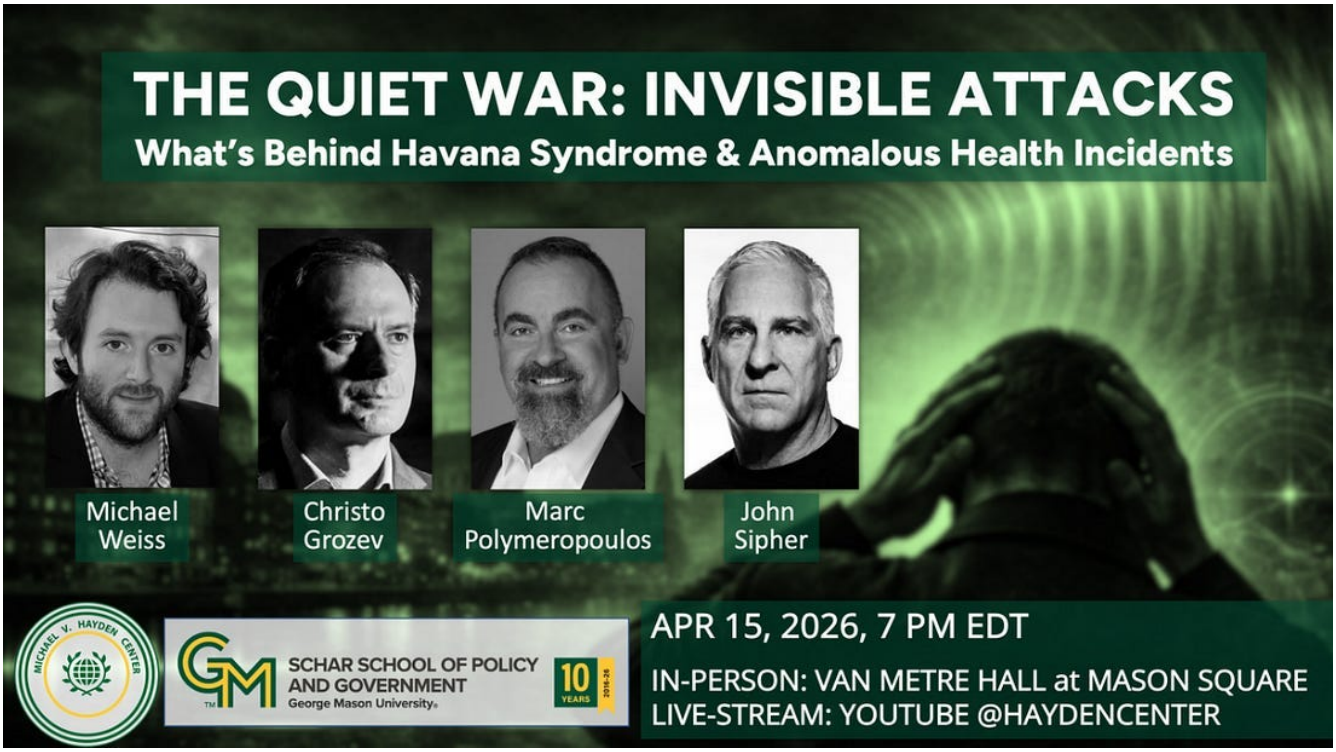

A reltron is a more sophisticated, highly efficient HPM oscillator that uses cavity-based beam pre-modulation and extraction, similar to a relativistic klystron, to achieve much better power conversion from the electron beam.

Chapter 5

Humiliating the C1A

Exposing Havana Syndrome and the Reltron

On 15 April 2026, George Mason University held an event on Havana Syndrome.

https://targetedjustice.substack.com/p/exposing-havana-syndrome-and-the?

Panelists:

Michael Weiss - journalist for 60 Minutes

Christo Grozev - journalist and expert on Russian Intelligence Unit 29155

John Siphor - former CIA Manager

Marc Polymeripoulos - former CIA agent and Havana Syndrome victim

/

Richard Lighthouse flew in to attend with Ana Toledo. Armed with flyers, the Havana Syndrome Civilian Registry and my victims' affidavit binder, we drove to the venue.

Only three people got there before us, allowing us to sit on the third row, next to the microphone destined for the public's questions, ready to jump when the queue started.

When the event began, the 300-person capacity auditorium was packed. The host stated that there were more than 700 people watching on YouTube.

The speakers gave their renditions regarding the exposure of Havana Syndrome, and their predictable attribution to Russia! Russia! Russia! They really pushed hard - that Russia was behind the Havana Syndrome attacks.

60 Minutes editors and producers were in the audience. Many C1A agents from the Operations Directorate were there. Richard spoke at length with several current and former CIA agents.

Present in the audience was independent journalist Sophie Ingberg. When I watched her roll her eyes when Richard gave her a Reltron flyer, made me wonder if she is part of the mockingbird press.

The Q&A session was limited, and even though Richard made the fourth in line, and I made the sixth. They did not focus the camera on us, but here were the questions we posed:

“Are the panelists familiar with a weapon called the Reltron? It is made in California at a company called Fisica Applied Technologies. This is the weapon that causes Havana Syndrome.”

They “answered” Richard’s question with “we don’t know. But we will look into it.”

Then, they cut the time and had the rest of us pose our questions which would be answered cumulatively.

This is the question I posed:

Even though they were supposed to address my question along those of three other people, they answered the others but not mine.

READ THAT AGAIN: None of them answered my question if they were going to look into the civilian victims of Havana Syndrome on U.S. soil.

We enjoyed being red pill dispensers, posing LIVE questions that dismantled the “It’s Russia”! disinformation campaign.

After the event, there was a social gathering with hors d’oeuvres.

We spoke to a few people, including Mr. Weiss, the 6o Minutes journalist that did the Havana Syndrome investigation. We told him we were working on having CDC and NIH issue diagnostic guidance for civilians suffering from Anomalous Health Incidents.

We gave Mr. Weiss the affidavits of the civilian victims and the AHI Civilian Registry. Richard gave him the Reltron weapon flyer.

He now knows.

We also spoke briefly to the Russian journalist, Mr. Christo Grozev who was nicer than I expected. Although he's a fierce proponent of the "It's Russia!" propaganda, I gave him the Civilian Registry and the two flyers about Reltron/Havana Syndrome.

He said something interesting that you all should take note: when we explained that we represent civilian victims of Havana Syndrome, he responded that he has been contacted by people that allege that they are suffering from Havana Syndrome and he believed they did not sound credible.

We replied that we understand.

It is an undeniable reality that members of our community have a difficult time of coherently communicating the atrocities that this program entails. And that is exactly how the criminals designed it: so that their pleas for help would sound "fantastical" and implausible.

All of us must be vigilant to be coherent representatives of the community, intelligently conveying fact-based information, devoid of claims about your personal experience.

Mr. Grozev very politely agreed to look into the information we provided.

He now knows.

//

The criminals were not prepared for us. Richard gave out dozens of Reltron flyers to the attendants. By the time that one of the entrance hosts told him to stop, he had almost ran out of them which he continued to give out until there were none left.

You might not think this is BIG, HUGE… But it is.

This is something that slipped by the criminals, they had no control over it, and in a roomful of mostly CIA-sympathizers, we had shone a light into their darkness.

Here is the full recording:

https://www.youtube.com/watch?v=gUirW0YVKsU

Chapter 6

Are Foreign Governments Purchasing the Reltron?

***All information provided by Targeted Justice comes from publicly-available records.**

/

Reltron/Vircator Directed Energy Weapon (DEW)

Is Física Applied Technologies selling the Reltron weapon to foreign governments or foreign companies? This is the satellite weapon that causes Havana Syndrome, when it is pulsed continuously. It is rated at approximately 250 million watts of power.

Física Applied Technologies, 2700 Merced Street, San Leandro, CA

/

The Reltron can also be operated as a single-pulse, electromagnetic pulse (EMP) weapon to disable radar stations and electronics.

The US Navy likely used the Reltron EW pod on 3 January 2026, to disable the radar stations and missile launchers (S-300) in Venezuela.

The Growler EW pod does not operate in continuous firing mode - it only uses a single pulse. However, this is the same basic weapon system used to cause Havana Syndrome, which President Trump calls the “Discombobulator.”

When the EMP pulse is released, it includes high-intensity, narrow-band microwaves, x-rays, and some gamma rays. It cannot be confused with a nuclear EMP signature, which would have a much larger broadband microwave signal, and far more x-rays and gamma rays. (MIL-STD-188-125)

The weight and dimensions of the pod are about 800 - 1000 lbs, 14 - 16 feet long, and 2 to 3 feet in diameter. The Reltron EW pods cost about $73MM each.

US Navy EA-18G Growler with EW pod.

/

Only the Royal Australian Air Force appears to be receiving Reltron pods, for their 12 aircraft. EA-18G Growlers, just like the US Navy.

/

Grok could not find any other public information suggesting that Física Applied Technologies is selling the Reltron to other foreign governments or foreign companies.

- Fisica is registered for U.S. federal contracting (e.g., listed on USAspending.gov, HigherGov, and with CAGE codes), indicating it likely holds or has held U.S. government contracts as a supplier in the defense sector.
- However, no specific contract details (e.g., named awards, values, or parties) mentioning "Física Applied Technologies" appear in public searches of global tender databases, EU/UK sites, or general web results. Procurement platforms like SAM.gov list opportunities generally, but nothing ties directly to this entity in open records.
- The company's recent formation and defense focus suggest any contracts would primarily be U.S. DoD-related (possibly classified or not fully public), but no explicit global contracts (e.g., international tenders or agreements) are evident.

Overall, while Fisica Applied Technologies operates in a contract-heavy defense industry (likely with U.S. government awards), and Reltron-like entities exist in tech/security, there are no publicly documented contracts worldwide explicitly mentioning either name as parties.

L3Harris's Role and Contract History

L3Harris Technologies (formerly L3 Technologies) is the prime contractor for NGJ-LB development and production. The program has faced delays due to protests and litigation:

- Initial Award (2020): In December 2020, the Navy awarded L3Harris a five-year Engineering and Manufacturing Development (EMD) contract valued at $496 million to design, produce, and deliver prototype pods (including eight operational prototypes and test assets) for integration on the EA-18G Growler.

- Protests and Recompetition: Northrop Grumman protested aspects of the award (e.g., alleged conflicts of interest), leading to a Government Accountability Office (GAO) review, Court of Federal Claims involvement, and a Navy decision to amend the RFP and re-compete in 2023.

- Re-Award (2024): On August 26, 2024 (announced publicly in September 2024), the Navy re-awarded L3Harris a five-year EMD contract valued at up to $587.4 million. This covers design, production, and delivery of:

  - Eight operational prototype pods for fleet assessment.

  - Additional test assets (e.g., 11 pod simulators, four jettison mass models, two captive mass models, two mission system prototypes, two technique development systems).

  - Engineering support, integration, test, and maintenance.

- As of January 2026, this remains the active contract. No major new awards or modifications appear in public sources beyond subcontractor announcements (e.g., CPI Aerostructures for pod structures in 2024–2027 deliveries; Intergalactic for thermal management in 2025; CFD Research for ram air turbine power in 2025).

Timeline and Status

- Development Phase: Currently in EMD (post-Milestone B, achieved in 2020 and reaffirmed post-recompete).

- Deliveries: Prototypes and test assets to be provided over the five-year period (through ~2029).

- Early Operational Capability (EOC): Scheduled for 2029, per NAVAIR statements.

- Production: Not yet in full-rate production; focused on prototypes for testing, airworthiness verification, and fleet evaluation. Wind tunnel tests and other validations were underway as of late 2024.

- Joint Aspects: Cooperative program with the Australian Department of Defence (Royal Australian Air Force will receive the capability for commonality in future variants).

Electromagnetic and Technical Focus

NGJ-LB emphasizes electromagnetic spectrum dominance by enabling standoff high-power RF jamming, simultaneous multi-target engagement, reduced aircrew workload, 360-degree coverage, and scalability for future threats. It addresses low-band gaps (e.g., 0.1–3 GHz range) to complement the mid-band NGJ-MB (developed by Raytheon/RTX) and future high-band increments.

Chapter 7

US Government Contracts to Fisica and its Precursors

Física Applied Technologies

2700 Merced St, San Leandro, California.

This is the company that makes the Reltron, which causes Havana Syndrome. It is a satellite weapon operated by the U.S. Space Force. President Trump calls it the “Discombobulator.” The Pentagon has been purchasing equipment and services from this location for decades. Fisica acquired the company in 2024.

Government contracts since 2000.

The company located at 2700 Merced St in San Leandro, California, is Fisica Applied Technologies, Inc., a defense contractor specializing in airborne and ground-based antennas, electromagnetic systems, simulators, and related technologies for defense applications. The company was formed in 2024 through the $200 million acquisition of three businesses (ATI, Datron, and Randtron) from L3Harris Technologies. Prior to that, the entity at this address operated as L3Harris Applied Technologies (and previously as L-3 Communications Pulse Sciences) following L3’s acquisition of Titan Corporation in 2005. Before 2005, it was known as the Pulse Sciences Division of Titan Corporation.

Since 2000, this entity has received numerous federal government contracts, primarily from the Department of Defense (DoD), for products and services such as antennas, radiation technology

equipment, pulse power systems, repair services, and simulators. Detailed transaction data is available on USASpending.gov from FY 2008 onward (earlier data is summarized or under predecessor names). Total prime contract awards are approximately $37.6 million, with additional subcontracts exceeding $73 million. Contracts before 2005 were awarded under Titan Corporation, and those from 2005 to 2024 were typically under L3 or L3Harris, but all relate to the operations at this address. The list below includes all identifiable contracts from available sources, grouped by year where possible. Note that this is not exhaustive, as some contracts may be classified or not publicly detailed, and totals reflect obligated amounts where known.

Key Contracts Since 2000 (Prime Awards to the Entity at 2700 Merced St, San Leandro, California)

Pre-2005 (Under Titan Pulse Sciences Division):

Titan Corporation (parent) had broad DoD contracts involving pulse power and electromagnetic systems, including a $163.9 million contract from the U.S. Army Space and Missile Defense Command in 2005 for Chemical, Biological, Radiological, Nuclear, and High-Yield Explosive (CBRNE) consequence management (ID: Unknown, Agency: DoD, Amount: $163.9M, Period: Started 2005, Description: Planning, analysis, exercise, and IT services for CBRNE operations; the Pulse Sciences Division contributed to electromagnetic simulators and related tech).

$350 million multi-year IDIQ contract from the Department of Homeland Security in 2006 (ID: Unknown, Agency: DHS, Amount: $350M, Period: 2006, Description: Support for the National Exercise Program; inherited from Titan and involved pulse power applications for defense simulations).

Additional Titan contracts included $112.1 million in 2003 for translation services (Agency: DoD, but not division-specific) and various research contracts with Lawrence Livermore National Laboratory for Titan laser systems exploring high-energy pulse power for fundamental science and nuclear weapons effects (ID: NAS2-10380, Agency: NASA/DoD, Amount: Unknown, Period: 1980s-2000s, Description: Titan Probe Technology Assessment and Development Plan Study, including pulse capability for stellar conditions and threat protection).

2005-2023 (Under L-3 Pulse Sciences / L3 Applied Technologies / L3Harris Applied Technologies):

FY 2008 total spending: $4,369,296 (Multiple awards, Agency: DoD, Description: Radiation technology equipment and components, including flash X-ray systems).

FY 2009 total spending: $11,565,287 (Multiple awards, Agency: DoD, Description: Electromagnetic systems and simulators).

FY 2010 total spending: $6,695,672 (Multiple awards, Agency: DoD, Description: Airborne antennas and defense systems).

FY 2011 total spending: $5,597,128 (Multiple awards, Agency: DoD, Description: Pulse power systems for ISR and electronic warfare).

HDTRA119F0006 (IDV: HDTRA113D0002, Year: 2018, Agency: Defense Threat Reduction Agency, Amount: $14.3M, Period: Started 12/10/2018, Description: Radiation technology equipment and components).

N0016418P0085 (Year: 2018, Agency: DoD, Amount: Unknown, Period: 2018, Description: Contract for applied technologies support).

W911QX21F0174 (IDV: W911QX21D0005, Year: 2021, Agency: DoD, Amount: Unknown, Period: 2021, Description: Electromagnetic systems).

W911QX21F0188 (IDV: W911QX21D0005, Year: 2021, Agency: DoD, Amount: Unknown, Period: 2021, Description: Defense products and simulators).

SPE4A722P5109 (Year: 2022, Agency: DoD, Amount: Unknown, Period: 2022, Description: Applied technologies equipment).

N0038323FT205 (IDV: N0038322GT201, Year: 2023, Agency: Naval Supply Systems Command, Amount: $2.1M, Period: Started 9/28/2023, Description: Aviation parts and auxiliary equipment).

SPRBL123F0213 (IDV: SPRBL123D0021, Year: 2023, Agency: DoD, Amount: Unknown, Period: 2023, Description: Defense contract support).

2024+ (Under Fisica Applied Technologies):

W911QX24F0080 (IDV: W911QX21D0005, Year: 2024, Agency: DoD, Amount: Unknown, Period: 2024, Description: Electromagnetic systems and simulators).

SPRBL125D0001 (IDV, Year: 2024, Agency: DoD, Amount: Unknown, Period: 2024, Description: Defense products).

N0038325C002N (Year: 2025, Agency: DoD, Amount: Unknown, Period: 2025, Description: Contract to Fisica).

N0038325F0055 (IDV: N0038322GT201, Year: 2025, Agency: Naval Supply Systems Command, Amount: $115.7K, Period: Started 9/11/2025, Description: Aviation equipment).

15--plate,structural,ai (Year: 2025, Agency: DoD, Amount: $27,292, Period: 2025, Description: Aircraft structural parts; NAICS 336413 - Other Aircraft Parts and Auxiliary Equipment Manufacturing).

Repair Services Mini Mutes (Year: 2025, Agency: DoD, Amount: $270,000, Period: 2025, Description: Repair of specialized equipment).

Additional Notes

Most contracts are firm-fixed-price or cost-plus-fixed-fee, with a focus on DoD agencies like the Army, Navy, and Defense Threat Reduction Agency.

Total awards under L3Harris (parent) are much larger ($181B+ company-wide), but the above are specific to the Applied Technologies division at this address.

For a complete list, refer to USASpending.gov using the UEI GXRFARNF7PN3 or CAGE 1TS25, or search for predecessor names. Contracts may include IDIQ vehicles allowing multiple task orders.

The entity also has subcontracts (e.g., $73.4M) with primes like General Dynamics and Raytheon, but the query focuses on direct government contracts.

This information is based on public records from USASpending.gov, GovTribe, HigherGov, and related sources.

Chapter 8

Directed Energy Weapon (DEW) Attacks – Is it Russia, China, or the U.S.?

Lockheed Sunnyvale, 1961. Notice that none of the men are wearing military uniforms, because they are corporate employees. They ran the Satellite Control Network for the Air Force.

/

Who is Behind it?

Ten good reasons prove it is the CIA, Pentagon, and US Govt Agencies.

The government criminals (CIA PsyOps) continue their “Mockingbird” propaganda that China or Russia is behind the V2K and DEW. We know who is behind it - the CIA, and they don’t work for Russia or China.

Reason 1. The V2K proves it.

Some of the best proof we have, that the targeting is based in America - is the V2K. The voices have been documented since the 1980's - and for the early years - it has always been in perfect American English. Not Chinese. Not Russian. (yes - we are aware that since about 2003, there are many languages involved.)

Joey is a Targeted Individual in Houston. He has V2K. He is half Chinese, and can speak and read Chinese. His V2K is unable to do either. They simply mock him, when he is reading Chinese and make up the sounds for each character. If China was behind it, could they read and speak Chinese? Would the V2K have a Chinese accent? He has concluded - it is definitely not China.

Norman has had V2K since about 1990. It is in American English, no accent. This was before there were any networks of cell towers. He knew it came from satellites.

Harlan Girard had V2K since about 1984, before he passed away in about 2020 - always in American English. He knew about the CIA’s MK-Ultra program. He also knew the attacks and V2K came from satellites, because there was no network of cell towers at that time.

https://www.washingtonpost.com/archive/lifestyle/magazine/2007/01/14/mind-games-span-classbankheadnew-on-the-internet-a-community-of-people-who-believe-the-government-is-beaming-voices-into-their-minds-they-may-be-crazy-but-the-pentagon-has-pursued-a-weapon-that-can-do-just-that-span/a0d09db6-d7aa-4fcd-a829-2a3ebc56df9d/

Reason 2. SATELLITE GPS

The microwave attacks and V2K require the use of satellite GPS, which the US had starting in 1978. The Chinese GPS system called BEIDOU was not fully operational globally until 2020, although by 2012, they had regional operations over China.

https://en.wikipedia.org/wiki/BeiDou

The Russian system called GLONASS was not fully operational until 1995. And it immediately declined due to lack of funding until 2003, when it was restored.

The U.S. GPS system has been operational for the military, since about 1980. Wikipedia lies about it, because they know this proves the US Space Force liability.

See our timeline.

https://targetedjustice.com/timeline

By 1984, there were at least 8 U.S. GPS satellites operating. The operations were conducted by Lockheed Missiles and Space Company (LMSC) in Sunnyvale, California.

In 1992, the Vircator DEW weapon systems were fully operational and in 1993, Lockheed transferred the daily operations to Schriever Base (then called Falcon Air Station).

Harlan was first DEW attacked in 1984, and Norman was first DEW attacked in 1985. They are not US Government employees. They are US civilians. They have never worked for US Intelligence Agencies. This further proves the C1A and State Dept are lying.

The timeline provides compelling evidence that the US Air Force (under Air Force Space Command) started the attacks in the early 1980's.

In the 1980’s, the Russian GLONASS satellites were wildly inaccurate, unreliable and some of their first satellites were actually “dummies,” because they could not launch enough operational satellites.

Reason 3. Fusion Centers & Gangstalking

Do you think China and Russia would be able to cooperate with Fusion Centers in the United States to provide local stalking - vehicular and otherwise? No. The gangstalking program is a key part of targeting. The Brennan Center issued a report proving that the U.S. Fusion Centers were involved.

https://web.archive.org/web/20250120185303/http://www.targetedjustice.com/brennan-center-for-justice.html

The Senate Subcommittee issued a report proving that U.S. Fusion Centers were involved.

https://web.archive.org/web/20250118104611/http://www.targetedjustice.com/fusion-centers---fraud.html

Reason 4. Treaties

The US State Dept signed “scientific cooperation” and “homeland security” treaties with China and Russia, so they could share the FBI’s Terrorist Screening Database (TSDB) with them. It was initiated by the United States and has almost identical language - proving the US (Deep State) is behind the entire scheme.

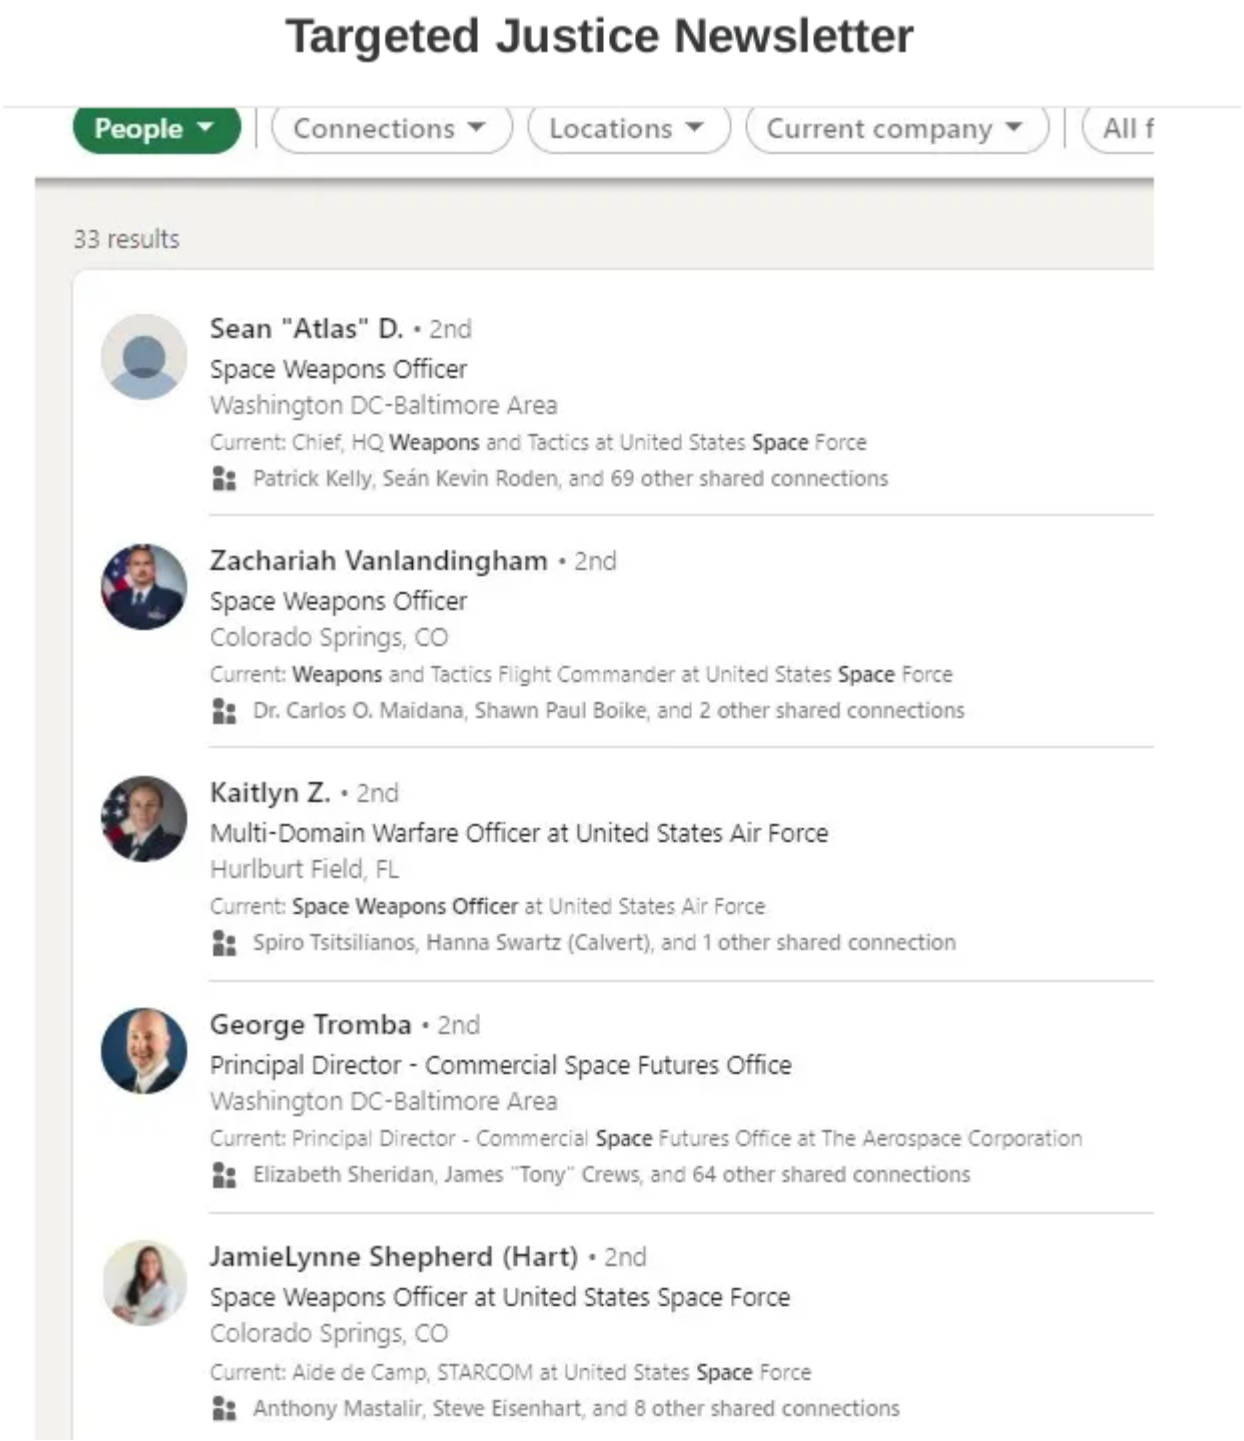

Treaties in Force

https://www.state.gov/treaties-in-force

See our newsletter of Aug 20, 2025.

/

Reason 5) Space Weapons Officers

The US Space Force controls more than 200 major satellites in orbit. That is more than all other governments combined, including Russia and China. Also, the US Space Force openly admits they are operating electromagnetic weapons in space. See our newsletter of 1 September 2022 - where we list the names of 33 Space Weapons Officers. All of them worked at Schriever Base. They are all US government employees.

More Space Weapons Officers...

https://targetedjustice.substack.com/p/more-space-weapons-officers

Schriever Space Force Base is located approximately 10 miles east of Colorado Springs, Colorado. Schriever SFB is home to 8,000 military and civilian employees. It is the largest satellite operations facility in the world. / 33 people listed here have worked as a “Space Weapons Officer” at Schriever SFB. They are all United States citizens. There are no foreign citizens.

\

Reason 6) Tracking Your Head

The top of your head is being precisely tracked 24/7. This is required to know where to aim the weapon. Did you see our videos proving that everyone is being tracked in the United States? Everyone we have tested in the U.S. with a gauss meter, has a microwave pulse on their head.

https://rumble.com/v6snxsp-satellite-tracking-by-schriever-base.html?

https://lessemf.com/product/dr-gauss-gauss-master/

\

Reason 7) Implants in Your Body

You have multiple implants in your body right now. Everyone we have tested in the U.S., shows evidence of implants. Do you really think the Russians and Chinese have been doing this for the last 20 years? In 2006 - Aaron Russo repeats a conversation proving that the Rockefellers are pushing the implants and RFID chips. The Rockefellers live in New York City, not Russia. Around minute 20:30

https://www.youtube.com/watch?v=N3NA17CCboA

/

Reason 8) Cell Phone Cameras

The CIA propagandists claim that portable Russian-made backpack weapons are behind the DEW attacks on 278,000 US civilians. This has been on-going for 20+ years, and yet no TI has ever captured a picture of someone with a handheld weapon and a backpack. Every person has a camera. WHERE ARE THE PICTURES? This is mathematically improbable.

Reason 9) The Cost of Handheld Backpack Weapons

DHS claims they paid more than $10 Million Dollars for a handheld backpack weapon. If 278,000 such weapons are operated in the US against Targeted Individuals, this would cost the Russian government more than $2.78 Trillion Dollars. This is far larger than the annual government budget for Russia. This amount would bankrupt the government of Russia. This is mathematically impossible.

Reason 10) David Grusch

David Grusch says that in 2021, people helping him “started to experience Havana syndrome symptoms,” “specifically microwave directed energy most likely.”

Meanwhile, he was “getting investigated by three agencies,” and hoped NGA would protect him “against the CIA and the NRO and certain elements of the DoD that were going after me.”

That points away from Russia and toward the “insider threat” raised in Catherine Herridge

And our website KEY EVIDENCE tab.

https://targetedjustice.com/key-evidence

Lockheed & Air Force Satellite Control Network (AFSCN)

History of the Air Force Satellite Control Network (AFSCN) which was run by Lockheed starting in 1958. This history is how Schriever Base got started. Lockheed has been involved since the beginning.

https://www.losangeles.spaceforce.mil/Portals/16/documents/AFD-060912-026.pdf?ver=2016-05-02-112845-540

Chapter 9

Coincidence?

Advisory Board Member, Maj. Prather interviews Richard Lighthouse about the Reltron/Vircator on 22 January. This is almost 3 weeks after the Maduro capture. We have explained that the primary weapon used to disable personnel and the electronics is a High Power Microwave (HPM) weapon known as a Reltron. It is manufactured by Física Applied Technologies, 2700 Merced Street, San Leandro, California.

The very next day - the Pentagon announced they are scaling up Directed Energy Weapons (DEW). They did not say it was a “sonic” weapon.

The Department of War has confirmed plans to expand the use of “directed energy weapons.”

Under Secretary of War for Research and Engineering confirmed on January 23 that it is further developing these weapons. This follows guards reporting a “sonic weapon” during the American raid to capture former Venezuelan dictator Nicolas Maduro.

Then, the very next day on 24 January, - President Trump announces the “Discombobulator.”

The guard said the weapon was then directed at Maduro’s defenders.

“At one point, they launched something; I don’t know how to describe it. It was like a very intense sound wave. Suddenly, I felt like my head was exploding from the inside,” he said.

“We all started bleeding from the nose. Some were vomiting blood. We fell to the ground, unable to move. We couldn’t even stand up after that sonic weapon — or whatever it was.”

/

Should we take credit for forcing these disclosures?

Could these announcements be a response to the Prather Point show? Certainly, there are many veterans and active duty military that follow Maj. Prather. The timing seems unusual…

Targeted Justice wants to expose the use of the Reltron on civilians, worldwide. It is an act of TREASON & TORTURE by the US Space Force and the C1A. This has been happening for decades. We have the receipts.

/

If you missed the show:

https://rumble.com/v74p354-exclusive-secret-sonic-weapon-truth.html?

Chapter 10

Titan Corporation History and Electromagnetic Weapons

2700 Merced Street building was first constructed in 1958.

Titan Corporation was founded in 1981 by Gene W. Ray, Ed Knauf, and Jack McDougall. These three, who were friends with backgrounds in defense and engineering (Ray having previously been an executive at Science Applications International Corporation), established the company in San Diego, California, as a defense contractor amid escalating Cold War-era Pentagon budgets.

Titan Corporation, founded in 1981 as a defense contractor, grew significantly through a series of acquisitions starting in the late 1980s, focusing on expanding its capabilities in government information technology, communications, surveillance, and related technologies. This strategy was driven by shifts in U.S. defense spending and industry consolidation, allowing Titan to integrate acquired expertise for larger contracts. From 1998 onward, it acquired at least 16 government IT companies, with a peak of activity around 2000. Below is a chronological overview of key acquisitions based on available

historical records; note that not all details (e.g., exact values or minor asset purchases) are publicly documented for every transaction.

Year	Acquired Entity	Details
1985	Electronic Memories & Magnetics Corp.	Acquired by Titan Systems (a predecessor entity), leading to the renaming as The Titan Corporation; focused on electronics and magnetics for defense applications.
1990	Government Systems Inc. (formerly Linkabit, a division of M/A-Com Inc.)	Added ~500 employees and enhanced surveillance and signal processing capabilities, adaptable for commercial uses; based in San Diego.
1992	Satcom product line from Gamma Microwave Inc.	Rebranded as Titan Gamma Satcom; expanded into commercial radios and satellite communications equipment.
1998–1999	VisiCom Laboratories, Inc.; Transnational Partners II, LLC; Horizons Technology, Inc.; Validity Corp.; Delfin Systems; DBA Systems, Inc.	Six acquisitions in government IT and defense tech; included companies from San Diego, Santa Clara, and Florida; integrated into Titan's systems for Y2K services and broader capabilities.
1999	Advanced Communication Systems Inc.	Provider of satellite communications and IT solutions; strengthened government and commercial network positions.
2000	AverStar, Inc.	Burlington, MA-based; supplied information systems and products for defense and IT.
2001	BTG, Inc.	Government contractor in IT and systems integration; expected to be accretive to earnings post-integration.
2001	Assets from Maxwell Technologies Systems Division, Inc.	Specialized in research, development, and technical services for military applications; acquired via subsidiary Titan Systems.

Titan also pursued joint ventures and spin-offs (e.g., Cayenta in 2000 for IT services, SureBeam for electron beam technology), but these are not direct acquisitions. By the early 2000s, the company had diversified into areas like medical sterilization and food pasteurization while maintaining a core focus on defense.

In terms of its own fate, Titan faced a proposed acquisition by Lockheed Martin in 2003 for ~$1.6–$2 billion, but the deal collapsed in 2004 due to a foreign bribery scandal settlement. Titan was ultimately acquired by L-3 Communications on June 3, 2005, for $2.65 billion, operating briefly as the "Titan Group" before full integration and name discontinuation in 2007. L-3 later merged with Harris Corporation in 2019 to form L3Harris Technologies, absorbing Titan's legacy operations.

The building at 2700 Merced St, San Leandro, CA was constructed in 1958. It is an industrial property on approximately 14.8 acres with multiple buildings (three distribution warehouses totaling ~209,000 SF, one office building, and improved land parcels). The land is part of "The Estate Of Georges Le

Roy" subdivision. Regarding historical owners, detailed ownership chains and transfer records are typically available through Alameda County's Recorder's office (not fully accessible in free online sources without registration or fees). Based on available public data. See propertyshark.com for details.

The current owner is Terreno Realty Corporation (a REIT specializing in industrial properties), which acquired it on August 2, 2018, for $36 million from an undisclosed seller. The acquisition was not described as a sale-leaseback, and the seller is not named in press releases or listings

There were 4 companies that had capabilities in megawatt pulsed power, in the early 1980's. It appears that only the Titan Corp had a production line. The other companies mostly produced prototypes and test demonstrators.

by the early 1980s:

1. Titan Corporation

- Founded in 1981, Titan quickly developed pulsed power systems through its Pulse Sciences Division (PSD), focusing on compact, high-energy devices for government applications.

- By the early 1980s, they were delivering systems for EMP/X-ray simulation, high-power microwaves (HPM), and SDI-related DEW research, with outputs in the megawatt to gigawatt range.

- Cumulative deliveries exceeded 200 systems (total stored energy >200 MJ) over subsequent decades, starting in the early 1980s.

2. Physics International (PI)

- Established in the 1960s, PI was a pioneer in high-energy pulsed power accelerators and had megawatt capabilities by the 1970s, extending into the 1980s.

- They built large-scale machines like Aurora (a multi-megavolt, gigawatt-level accelerator) in the late 1970s for the U.S. Department of Defense, used for x-ray simulation and weapons effects testing at facilities like Harry Diamond Laboratories.

- PI's work supported early SDI concepts, including particle beam and HPM research.

3. Maxwell Laboratories (now Maxwell Technologies)

- Founded in the 1960s, Maxwell developed high-power capacitor banks and pulsed systems by the 1970s, achieving megawatt capabilities in the early 1980s.

- Notable for the Checmate rail gun project (a compact high-energy capacitor module) in the mid-1980s, funded under SDI, which demonstrated megawatt pulsed power for kinetic energy weapons.

- Their systems were used for fusion, EMP simulation, and DEW testing, with peak powers exceeding 10 gigawatts in some configurations.

4. Ion Physics Corporation

- Active since the 1960s, they specialized in pulsed power machines for x-ray and radiation simulation, with megawatt-level systems by the 1970s and into the 1980s.

- Competed with Physics International for DoD contracts, building accelerators for the Air Force Weapons Laboratory and similar facilities.

- Capabilities included high-voltage, high-current pulses for nuclear effects testing, aligning with early SDI requirements.

APPENDIX

Contact me at RLighthouse –at – protonmail

Funding:

This research was generously supported with a grant from the Foundation Opposed to Academic Puffery (FOAP).

My entire collection of ebooks were deleted from Smashwords.com in January 2020, because kevin@smashwords.com claims he did not like my "intentions." He fully admits that I did not violate their Terms of Service, an issue of which they initially accused me. From 2013 thru 2019, I distributed more than 21,000 ebooks from a smashwords account. Most of them were free.

I am a proud whistleblower against government corruption – see my ebooks about the criminal acts of the CIA and FBI. Readers are advised that the C1A may be blocking or restricting access to some of my ebooks, especially outside the United States. Readers are further advised that digital tracking tags may have been placed in my ebooks. The content of some ebooks may have been altered – still trying to monitor this. If you have tried to contact me, it is possible that emails and phone calls are being blocked.

Statement

”For more than 10 years, this author has been stalked, harassed, and threatened by US Government agents from the CIA, FBI, and NSA - because of the content of my ebooks. My home has been broken into, repeatedly. In May 2014, my girlfriend was drugged and kidnapped from LaGuardia airport. This is not a joke. My computer, phone, and alarm system have been hacked, including those of my friends and family. It is truly pathetic, these government agencies have become criminal organizations, under the Deep State. If something happens to me (disappearance, false criminal charges, sudden accident, etc. - my readers can be certain that the FBI and CIA were involved. I am not depressed, I do not own a gun, and I have never been suicidal – this needs to be stated because the CIA continues to arrange murders, and stage it as a “suicide.” See my related ebooks identifying the murders of Gary Webb, Michael Hastings, Phil Schneider, William Colby, Dr Eugene Mallove, Stan Meyers, Phil Haney, and others. In my opinion, the CIA and Council on Foreign Relations (CFR) are behind these criminal acts; David Rockefeller was the CEO and Chairman for many years.

Related to the dead and missing scientists, which became a big story in 2026, I am the only scientist worldwide, that has provided the math and physics for true anti-gravity propulsion. My name and Targeted Justice, continue to be illegally listed on the FBI’s Terrorist Screening Database (TSDB), without Due Process or Probable Cause. A Brazoria County Sheriff’s Deputy informed me about this in 2016.
