

Women's Health

We provide OB/GYN clinicians with the latest in molecular diagnostic testing, allowing for fast, accurate and comprehensive screenings across a broad spectrum of pathogens and genetically influenced conditions.

Bacterial Vaginosis Panels:

- Estimate the quantity of normal vaginal flora and compare with pathogenic species
- Detect 10 pathogenic species causing bacterial vaginosis
- Provide the results in text and graphical format
- Provide suggestive treatment of BV based on the results
- Monitor the efficacy of antimicrobial therapy
- Can detect Aerobic vaginitis, Candidiasis

Now you can provide patients the quickest and most accurate diagnosis possible.

- Expedited Patient Results
- Can be performed along with PAP Smear
- Identifies pathogens which are difficult to culture
- Yields greater than 95% analytical sensitivity and specificity
- Simplicity of single sample collection
- Direct access to experienced scientific staff
- Personal customer service experience

As a high-complexity COLA accredited laboratory, we assist clinicians and health care providers to quickly identify the pathogens and underlying causes of disease.

We know better patient outcomes are achieved through fast, accurate, and reliable laboratory results

Pathogens Detected:

- Atopobium vaginae
- BVAB2
- Candida albicans
- Candida glabrata
- Candida parapsilosis
- Candida tropicalis
- Escherichia coli
- Enterococcus faecalis
- Gardnerella vaginalis
- Lactobacillus crispatus
- Lactobacillus iners
- Lactobacillus jensenii
- Mycoplasma hominis
- Megasphaera 1 & 2
- Streptococcus agalactiae
- Staphylococcus aureus
- Ureaplasma urealyticum
- Endogenous Control
