

Business Park Security

How CCTV surveillance can augment traditional guarding

Most companies believe manned guards can help mitigate disturbances and neutralise situations, while at the same time reducing the chance of criminal activities and/or accidents occurring. However, people cannot be omnipresent or always be in the right place at the right time. When combining manned guards with the power of today's CCTV AI technology, the results are unmatched.

In a Business Park security is critical for the protection of the entire site, which includes all the properties, assets and stock belonging to the many businesses operating from within the park.

At night, the park and its buildings are particularly vulnerable to attacks, and this is when 24/7 CCTV surveillance monitoring is essential.

Not having CCTV monitoring could have devastating consequences if the guards do not have a full view of the premises, so it is vital that the park has the right CCTV monitoring security in place. An undetected intruder has full access to all the buildings. Damage to the buildings and theft of stock and office equipment could result in huge financial losses and serious damage to business operations.

Hybrid Surveillance Solutions offers bespoke perimeter detection and off-site monitoring. The detection is set up to:

- **Detect** intruders before they reach your property
- **Deter** intruders by visible CCTV camera presence
- **Defend** your property by reporting incidents directly to your chosen armed reaction company

Manned security guarding has seen costs rise as the need for enhanced training, vetting, rest facilities and vehicles steadily increase.

There is also the inherent risk that manned guarding by the very nature is subject to human failings. Guards also have the physical limitation of only being able to be at one place at a time, resulting in limited coverage. Guards are also often targeted as they are key holders, with knowledge of security procedures.

A remotely monitored CCTV system will not only dramatically reduce overall security costs but deliver a far more effective security solution.

Benefits of the Hybrid Surveillance Solutions service

- No initial capital outlay – Security as a service on an OPEX model
- Installation of the latest CCTV network and camera technology that is continuously maintained, supported, and upgraded
- A proactively monitored solution on a 24/7 basis from an off-site control room
- Artificial Intelligence that reduces the possibility of human error, bribery, and coerced activity
- A possible reduction in the requirement for on-site security personnel
- Provides oversight and accountability of security personnel and response companies

320 Henriette Street, Wierdapark, Centurion, 0157
