

## What Can You Do to Protect Your Drinking Water Source?

- **PROPERLY DISPOSE OF CHEMICALS** - Never pour on the ground, down the drain, or toilet: cleaning supplies, paints, solvents, lawn and garden chemicals, gasoline, motor oil, antifreeze, or other waste chemicals. Dispose of chemicals, petroleum, oil and other lubricant products/waste, medications, etc. properly.
- **PURCHASE SAFER ALTERNATIVE PRODUCTS** - Instead of hazardous household products and pesticides, choose natural alternatives or Green Products. Read product labels carefully before purchasing to determine what substances they contain.
- **USE FERTILIZERS, HERBICIDES AND PESTICIDES PROPERLY** - Apply chemicals according to label instructions and avoid runoff. Do not exceed recommended application rates.
- **GOOD LIVESTOCK MANAGEMENT** - Keep animals and their waste out of streams, rivers, and lakes. Consider fencing off or bridging streams, applying and storing manure away from source waters, and manage grazing to maintain plant cover.
- **DISPOSE OF PET WASTE PROPERLY** - Clean up and dispose of pet waste by flushing down the toilet, seal it in a plastic bag and put into the garbage, or bury under 8 inches of soil. Pick up your pet waste when walking your dog.
- **PETROLEUM STORAGE** - Above ground storage tanks should be made of high quality steel and located on a concrete pad that has secondary containment to guard against leaks and spills.
- **PRIVATE WATER WELLS** - Properly plug abandoned wells to prevent a direct route for contaminants to enter the ground water.
- **REPORT SPILLS ON ROADWAYS** - Report spills from vehicles on the roadways in the protection area by calling "911" so that local emergency response teams effectively contain and remediate the spill to prevent it from entering the waterways.
- **USING WATER WISELY—USE IT SPARINGLY.** Check for plumbing leaks. Use water-saving showerheads, toilets, faucets, and high efficiency appliances such as dishwashers and washing machines. Water only when necessary and preferably in the mornings or evenings to avoid evaporation losses from hot and windy weather conditions. Utilize mulch to reduce evaporation from the soil surface.

# Lake Creek Metro District Source Water Protection

Protecting Our Community Drinking Water Supply !!!

## Our Source Water Protection Areas

### Our Water Sources

Lake Creek MD obtains its drinking water from three groundwater wells. The water is treated with a sodium hypochlorite solution for disinfection. As it leaves the treatment building, the water passes through a buried contact chamber, which supplies the necessary chlorine contact for proper disinfection before it enters the distribution system. Passing through the distribution system, the water is pumped to two water storage tanks.

### Source Water Protection

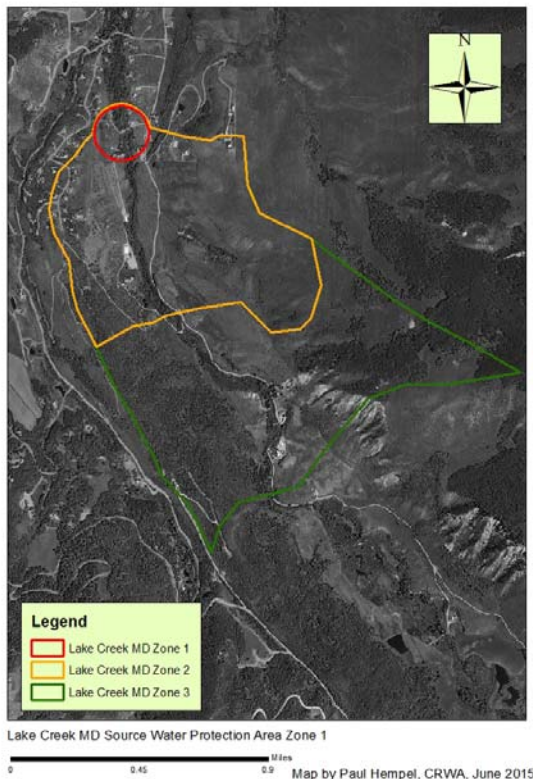

There is a growing effort in the country to protect drinking water sources before they become contaminated.

Why should Lake Creek MD protect its sources of drinking water?

- It is good for public health when drinking water supplies are protected.
- The costs of preventing contamination are very small compared to the costs of cleaning up after a contamination incident.
- Safe drinking water is essential to the community's quality of life and to aid in continued economic prosperity.

For generations, water quality was taken for granted and still today many people assume that our water is naturally protected. But, anything we do on top of the ground has the potential to affect someone's drinking water. As water moves through and over the ground, contaminants in and on the ground can be picked up and carried to a stream, river, reservoir or well that supplies drinking water to a home or a community.

Source water protection involves minimizing the negative water quality impacts on both land and water.

### Protection Planning Process

In September 2015, Lake Creek MD completed their Source Water Protection Plan. The Plan identifies: the area in need of protection, the potential sources of contaminants, and management approaches that could help to reduce the risk of contaminants entering the source waters. Activities that have a potential to cause pollution include: private wells, landscaped areas, security, road maintenance and, septic systems.

It is the people living and working in communities who have the most to gain or lose from the quality of their drinking water. Become an environmentally aware citizen and help avoid drinking water contamination. To obtain a copy of the Source Water Protection Plan contact Lake Creek MD at (970) 926-5970 or Colorado Rural Water Association at (719) 545-6748.
