

Paediatric Urology Annual Update Course

May 29nd-30rd 2021
AEST 1pm-5pm

Teams Webinar environment

Introduction:

This update course commenced in 2011, to address a perceived need for senior trainees in both urology and paediatric surgery streams to be exposed to focused teaching in paediatric urology. Given the breadth of content involved, the course is delivered as a two-year programme covering the topics common to both training streams. As interstate and international travel is currently difficult we have moved to an online format via Microsoft Teams.

Aims

Overall aims of the course are:

- to provide participants with a general understanding of the spectrum of congenital and acquired uropathology of childhood and implications in adulthood
- to involve participants in discussions of contemporary issues in the management of specific urogenital conditions in children
- provide opportunity for case-based discussion
- direct trainees towards further resources

Course Structure

Each part of the two-year programme will run as a two-day workshop, with “headline” sessions. Each session has a faculty, drawn from active practitioners in paediatric urology across Australasia and augmented by experts from related disciplines where appropriate. Sessions may include expert lectures, interactive discussions, quizzes, case-based discussions and point-counterpoint debates. The draft program is attached below. Note some variation may occur prior to the course weekend.

Registration

To register for this course please complete the attached form and return via email. A nominal amount is requested for the course to cover running costs and ensure ongoing courses in the future. Please nominate payment via bank transfer or credit card (via Square Space).

Once payment is confirmed a complete list of the program, faculty, resources and further reading with specific learning objectives will be forwarded to you.

Society for Paediatric Urology of New Zealand and Australia: SPUNZA
Paediatric Urology Annual Update Course
May 29th – 30th 2021 AEST 1pm-5pm

Day 1	Session	
13:00	Welcome and overview	Bec Cooksey
	Session 1: FOETAL UROLOGY	
13:10	Antenatal renal anomalies including Antenatal megacystis	Rajay Rampersad
	Session 2: OBSTRUCTIVE UROPATHIES	
13:40	Posterior urethral valves	TBA
14:10	VUJ Obstruction & PUJ Obstruction	Bhavesh Patel
14:50	Discussion and question time	
	Session 3: INFECTION & VUR	
15:10	UTI – investigations, prophylaxis	Paul Jackson
15:30	Vesico-ureteric reflux: Surgical and non-surgical issues	Michael Ee
16:00	Renal failure physician's perspective	Selma Torronen
16:30	Operating in renal failure- considerations	Rob Coleman

Day 2	Session 5: STRUCTURAL ANOMALIES	
13:00	Duplication anomalies	TBA
13:30	Exstrophy-epispadias complex	Grahame Smith
14:00	Session 6: URINARY TRACT PHYSIOLOGY	
	Session 7: NEUROGENIC BLADDER	
14:30	Early management and surveillance	Neil Price
15:00	Bladder augmentation / continence procedures	David Winkle
	Session 8: NON NEUROGENIC-NEUROGENIC BLADDER (Continence)	
15:30	Evaluation, ICCS nomenclature	Ani Deshpande
16:00	Continence management in children	Ani Deshpande
	Session 9: URODYNAMIC STUDIES	
16:30	Practical application and interpretation	Mike O'Brien
16:55	Evaluation and closing	Bec Cooksey
