

Chrome Reset Settings Hack Evidence – Also see three videos recorded on phone on 230614 between 2pm and 710 pm. All show firm indications that the reset which is routine using Chrome as issued by Google has been tampered by police powers, same as other computer hacks and printer hack. See also same day occurrence in Al Jazeera as documented showing first web page coverage of June 2021 Juneteenth event in the middle of other news which all relates to current events from June 2023.

Pattern evidence destruction similar to web search evidence destruction pattern below has been experienced as to bank accounts. For example BA accounts opened in NJ in 2007 was implemented in Summer 2015 which led to closure of both Bank of America personal and business accounts in Summer 2015 by Defendants using cover of "investment" to provide two fraudulent checks (per scam contained in email evidence from that period) which resulted in those accounts being closed by BA and which required use of cash walked from Ramsey Wells Fargo to BA branch in Ramsey to pay off something more than \$9K after BA explicitly refused WF cashier's check I had walked over to payoff overdraft which cashier's check had originated at Wells Fargo about 5 minutes prior in my attempt to pay off the dishonored checks using Dean Smith investment funds around the end of August 2015. Account history was deleted as BA informed me that they would not preserve evidence as the litigation did not directly involve them. All account history was stored online, not on paper statements and access to account was lost by the closures in 2015 before I could download (and did not think there was a need to do so in August 2015).

**Subject:** Chrome Search History Deleted on 230404 - Tampering

Chose to delete cookies this morning to attempt to improve performance after a couple of reboots and yet another non-factory updates (which impact normal performance with other forms of hacks installed and occurs frequently despite my ongoing use of the very stable Windows 10 OS. As a result of my decision to clear cookies, Defendants used this performance issue which they enabled by hack to cause the clearing of search history, making it look as if it was my choice when it actually occurred because of their performance hacks and then a stealth removal of search history using the following means: Chrome search history selection on Basic tab was checked while this same selection was unchecked on the Advanced Tab I was using in my effort to clear cookies. This rendered my search history unavailable to me by this hack, and also rendered the header info (originating IP addresses and routing info is in header info of search results so the origin can be traced back). Same selection choice (History Delete) in the first position on the Advanced tab I was looking at was unchecked as I desired to retain search history. This was another in a long-running series of web search history delete takeovers conducted by Defendants. In the past these have typically been the result of a technical fault (hack of Chrome) which required clearing of all cached items and all search history using a remote takeover by Defendants in order to restore normal operation. All have been intended to eliminate traceability and constitute obstruction through evidence destruction by those Defendants

This is a technical hack pattern violation which series began in the early 2000s and has been implemented periodically well over a dozen times in the past. It is consistent with other pattern hacks such as disabling of printers and bogus circular “customer support” interventions which leave the problem unresolved, such as disabled printers – Lexmark, HP, Epson most recently – as well as requirements between 2011 and 2018 to repair my computer at Staples while in Ramsey – my current recollection is this repair was required twice (which would allow both hardware and software tech to be installed without consent as well as to physically wipe or modify information on the hard drive.)

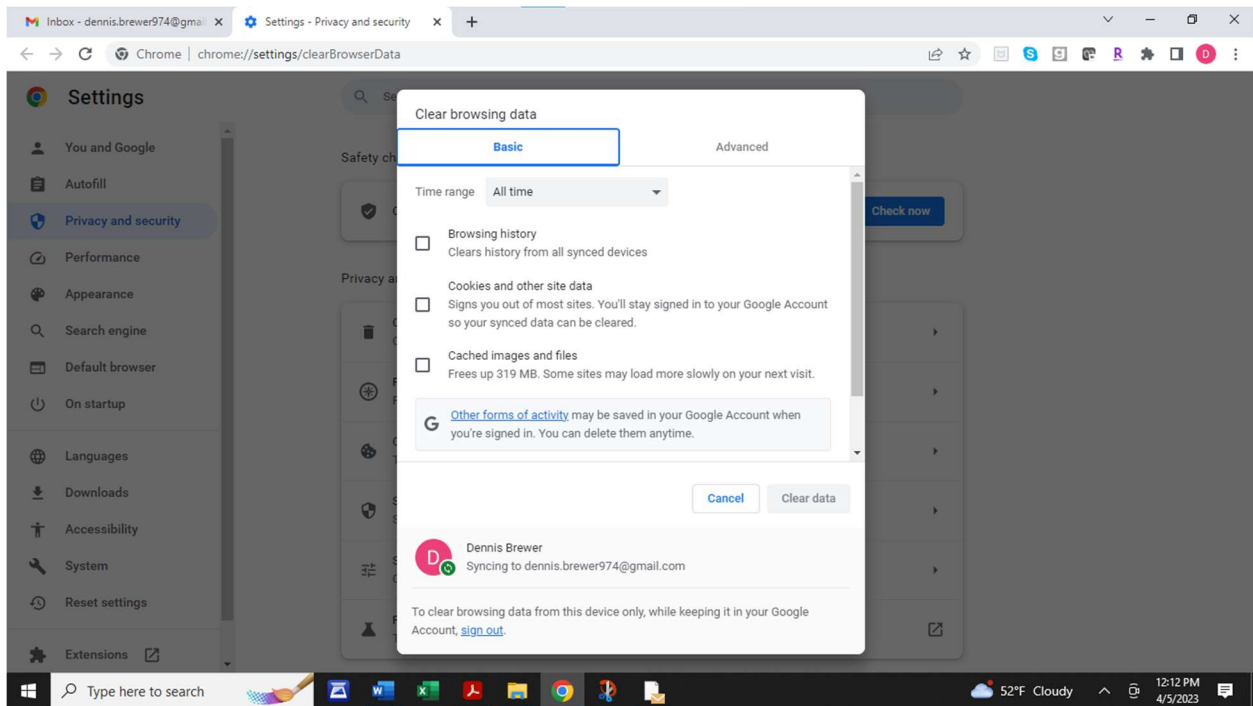

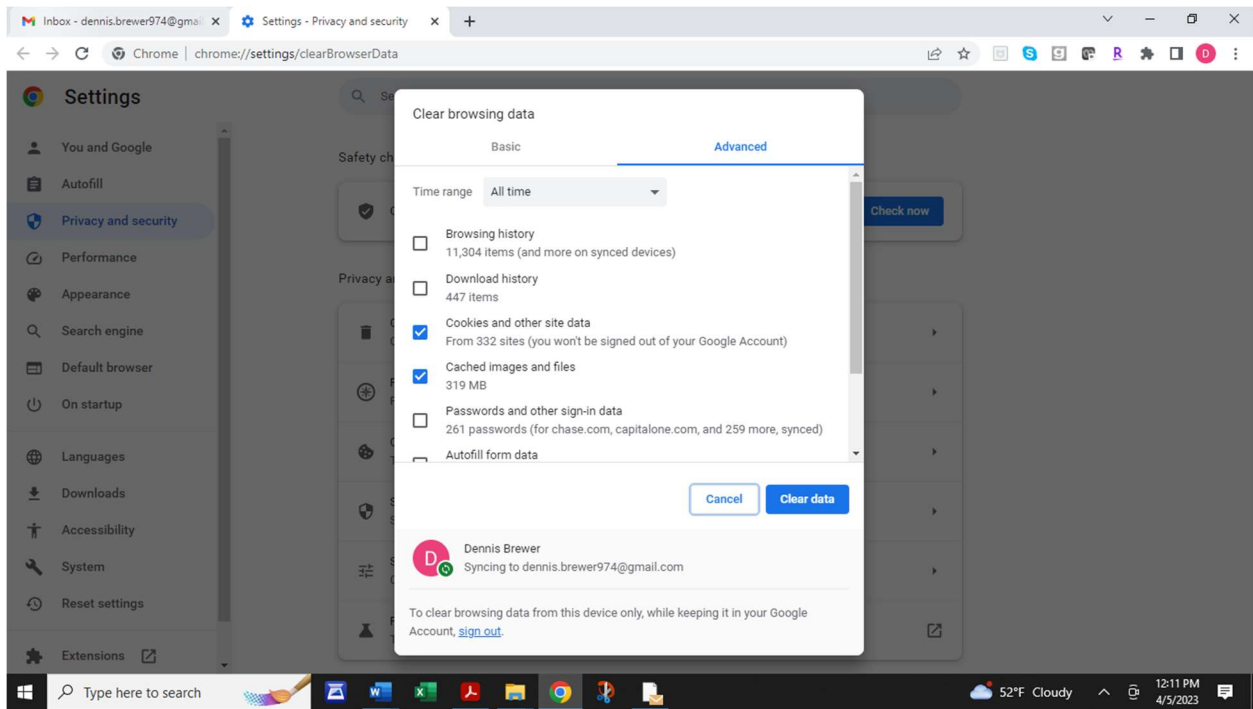

Regards,  
Dennis

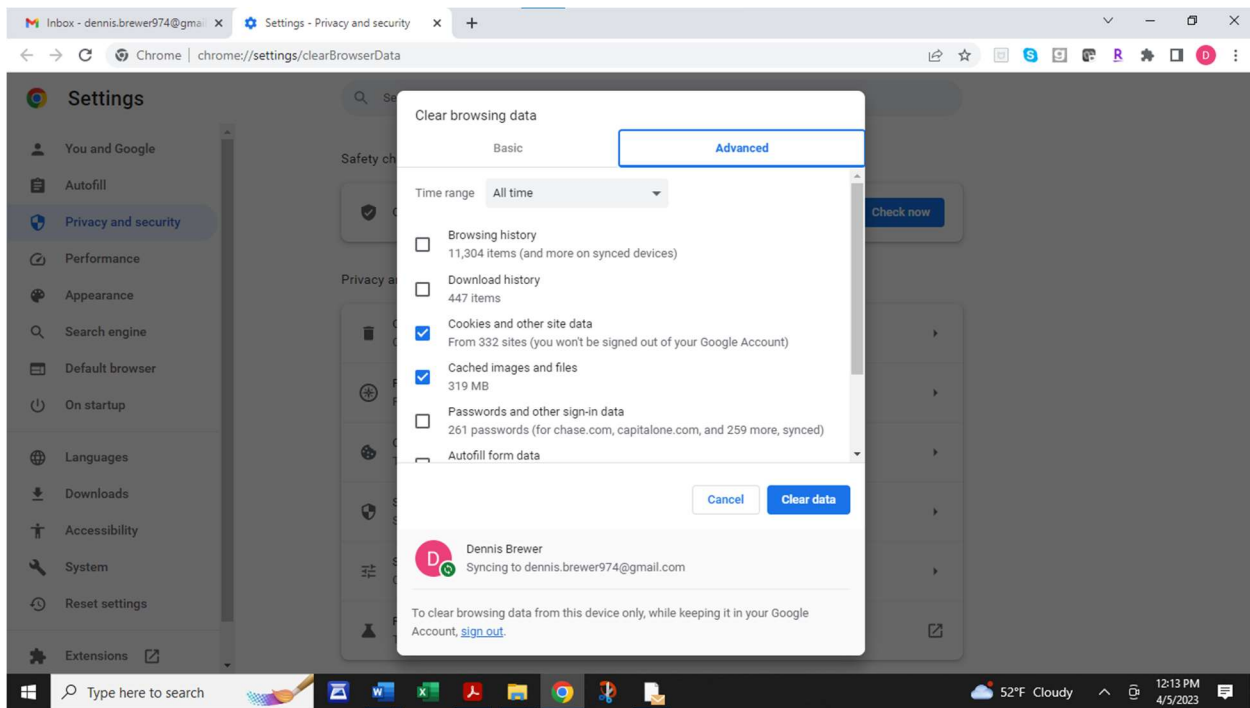

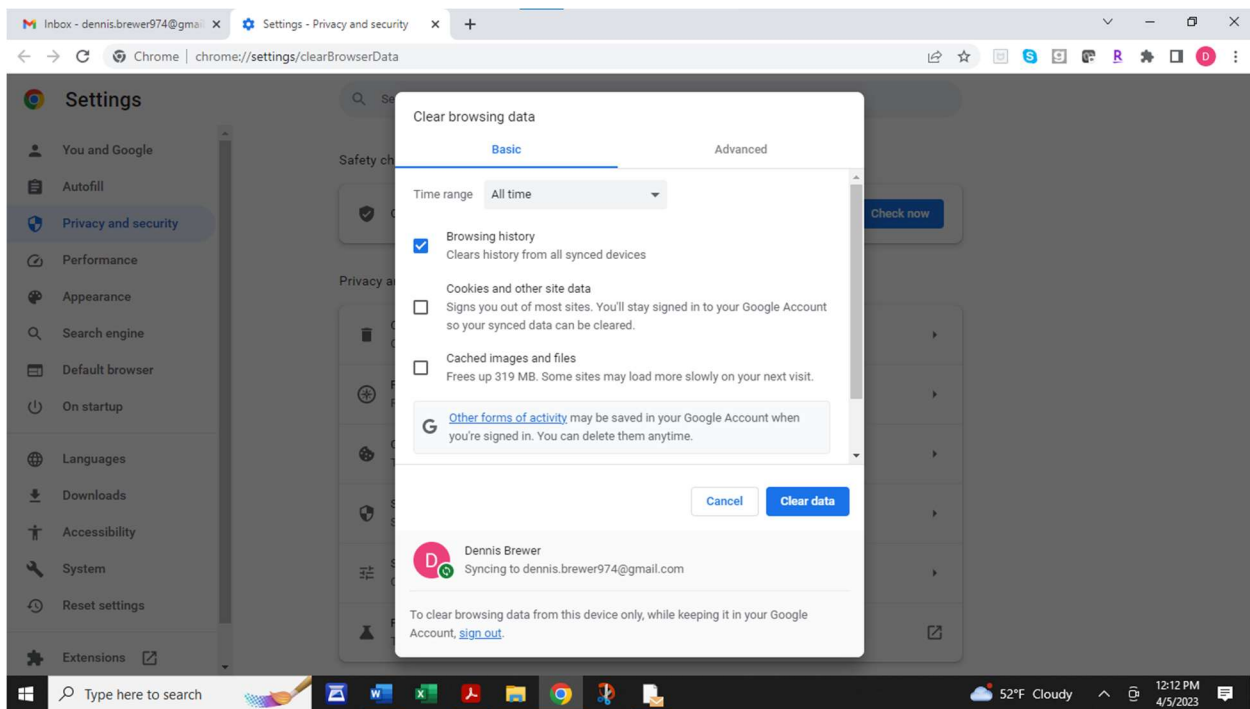

Dennis Brewer

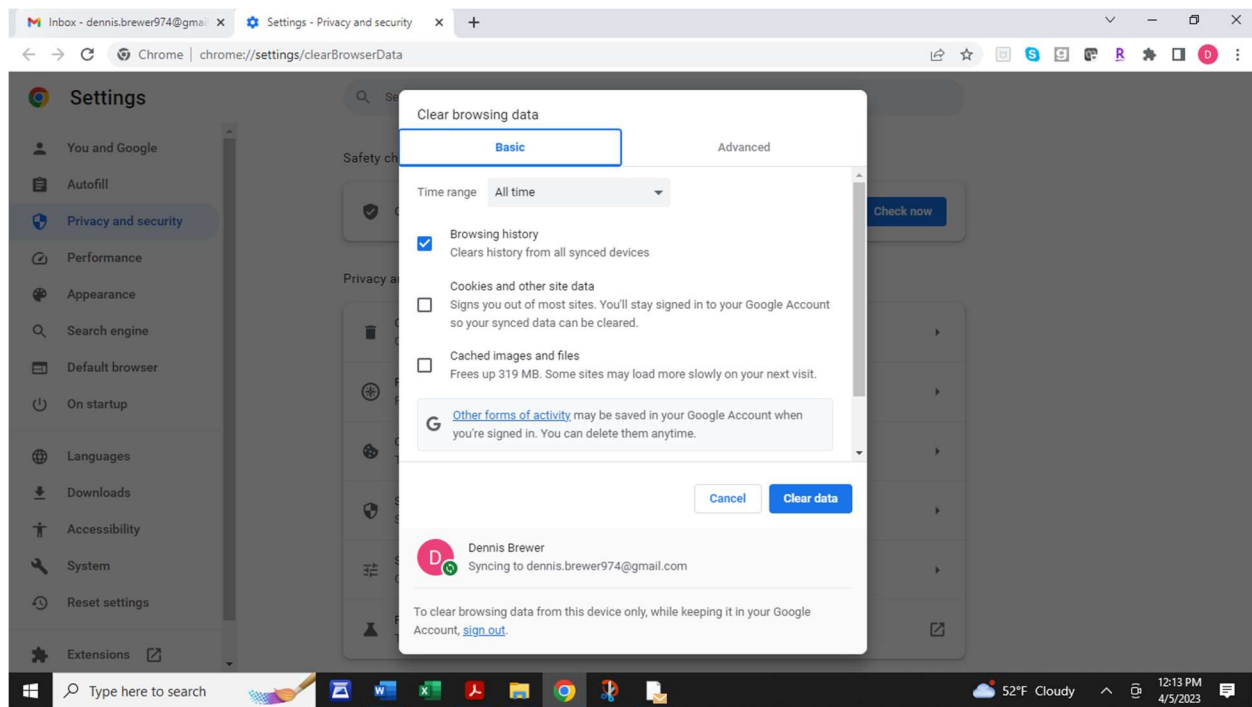

As Shown in the following sequence, the Clear History Selection remains checked on the Basic tab even when not checked (same or similar functionality). The issue fro the Google engineering team is:

Is this the standard way this application works or is it a non-standard method which can result in the inadvertent erasure of information which the user desires to keep while not reviewing both tabs prior to their activation?

Interesting argument. Who has benefitted from the economic policies of the last 40 years? Check FRED, the Federal Reserve Board website on share of wealth and income of the top 1% and the top 10%. Here, I'll help:  
<https://news.research.stlouisfed.org/2019/07/fred-adds-wealth-distribution-data/>  
[https://fredblog.stlouisfed.org/2015/03/the-evolution-of-income-inequality/?utm\\_source=series\\_page&utm\\_medium=related\\_content&utm\\_term=related\\_resources&utm\\_campaign=](https://fredblog.stlouisfed.org/2015/03/the-evolution-of-income-inequality/?utm_source=series_page&utm_medium=related_content&utm_term=related_resources&utm_campaign=)  
As for social welfare and income strata, please remember the regressive minimum taxes on the lower income levels for security and Medicare, from which incomes above threshold are exempt. Those have to be factored into the personal burden as well. Warren Buffett's effective tax rate is about 8%, his secretary pays somewhere closer to 17% to 20%, those mandatory minimum taxes.. If 50% pay 97% of taxes, why is it that 1% would bear all these other expenditures? Claim to be too burdensome? Wouldn't they also fall on the other 49% you mentioned? And why is it we spend an extra \$5 trillion each year to have privatized health care AND two years less life expectancy than Europeans? Most of us came from Europe, right? Access to our private health care system is discriminatory, attached to some kinds of jobs, not to all. Couldn't we use the extra \$5 trillion we spend for a private system on some other things, and have better health care? Europe does it

**RobertLynch** Sun 28 Aug 2022 03:13:37 PM

As Steve Jobs liked to say, one more thing. What economic policies (of the government) created income disparities? These arguments tend to cherry pick correlation and never explain causation. Using that approach one could say that except for traditional Social Security the entire modern welfare state has been created since the 60's which correlates with increasing income disparities. Put aside that most such analysis ignore the purchasing power of government benefits one could argue that based on correlation alone income inequality has been caused by the expanded welfare state. That just doesn't fit your argument though so you choose other things that are just as disconnected.

230910: Copy to D Drive disabled by external hack as twice attempted this time 804pm. Previous issues wit this same copy function began as to Sheldon Beef, then spread to Dennisbrewer.us entire on this day

230912: Attempted backup of dennisbrewer.us from pc to D drive 128GB flash drive. Process worked for a single folder Subsequent Events - file names listing visually reviewed on D drive. Change of hack from prior attempt when completely blocked on 230910. Then hacked to abort backup process. Subsequent Events did get copied to flash drive per review of file names of contents of the folder. 852am

Added dennisbrewer.us LP Evid Exhibits, personal drive email attachments, dennisbrewer.us EPL, to D drive at 930am

Flash drive used black cover red stripe (Kootion)

## Server Password Hacks 230914

Passwords hacked so not live server linked in Outlook to email server at GoDaddy on following accounts as noted upon restart of Outlook this morning around 7am

Gannettpeakranch.com

Sheldonbeef.com

Dennisbrewer.us

Changed passwords at GoDaddy. Then had live link to server on gannettpeakranch when first checked, then all 3 accounts deadlinked (PC Outlook access to server inoperative hyperlink) by intervening hack.

**Subject:** Unable to print in any color

Attempted to correct printing problem with black ink by installing update of firmware et al as shown in video sequence shot this date just before 8AM. As sequence shows, cannot successfully remove and replace ink cartridges for any color, so all printing in any color is now disabled. Once second update, can still scan only. So, this hack has completely disabled all printing leaving me in the same situation as I was with HP inkjet printer when that printer had to be replaced. Also stuck with about 2 dozen useless ink cartridges (around \$15 each subject to purchase price verification) and 10,000 pages of printer paper at \$50 per case (\$100 total).

Typical fubar created by hackers in this situation and by other actions in other situations many thousands of times beginning in 2001 with high intensity/frequency, on much slower cycle prior to that 2001 AUMF induced accelerant.

Regards,  
Dennis
