

TAKIN' CARE OF BUSINESS

... WITH A MANUAL CHUTE FROM STAMPEDE STEEL

Not only will your cows thank you, but so will your crew!

With the development of the first livestock handling system in the industry to operate from the rear, Stampede Steel's innovative design keeps you and your crew out of the flight zone, making for better and safer handling of livestock than ever before. Add a Stampede easy-flow "S" Alley and Crowding Tub to make working cows a pleasurable experience, not to mention a real time-saver!

The 2K Self Catch model featured is one of the heaviest and quietest chutes on the market. Available with right- or left-hand controls, it comes standard with Neck Injection Doors, Brisket Bar and a Ratchet Bar. Available options, include: SureCatch, Sunrise, Double Dutch Doors, Head Table and Load Bar Scale System.

The Stampede Sales team, made of up ranchers who understand the needs of today's cattlemen, will work with you to setup a system to fit your operation.

QUALITY AND CUSTOMER SERVICE ARE SECOND-TO-NONE AT STAMPEDE.

STAMPEDE STEEL *Chutes*

MAKE WORKING CATTLE ENJOYABLE!

2K SELF CATCH SQUEEZE

One of our most popular models, the 2K Self Catch Squeeze comes with a state-of-the-art Head Catch. The Head Gate is chain driven, which means there are no cables, and adjustments are easy and hassle-free!

The Self-Catch Head Gate is outfitted with Head Restraint Neck Extenders that keep the animal from moving side-to-side, making implanting, neck injections, tagging and any work around the head and neck area stress-free. The 2K Head Gate comes standard with two Neck Injection Doors for easy access for vaccinations.

All squeeze chutes have a parallel axis body that opens up to 32-inches wide, and closes up to just 9-inches wide.

MANUAL SQUEEZE

The Manual Squeeze model from Stampede also features Rear Controls, Neck extenders and Neck Injection Doors. Injections are safe and stress-free, and the body of the chute has a parallel axis squeezing motion allowing it to accommodate any size of animal.

This chute combines mass with noise-reducing technology, and the Bifold Tailgate enables producers to operate the system with one simple motion from the rear.

All Stampede Manual Chute models come standard with a Ratchet Bar to keep cattle from backing up in the chute, as well as a Brisket Bar to keep cattle from going down in the chute.
