

My services are exceptionally valuable to the vet when:

- the doctor has exhausted all measure to help your pet
- the client can not afford a surgery or an MRI
- the pet is at risk for spine surgery and cannot be done
- the pet cannot tolerate additional medication

I work directly in conjunction with the veterinarian, the pet may need concurrent medication to relax surrounding soft tissues, and to decrease the pain and inflammation.

I can't tell you the hundreds of pets that I have saved from euthanasia, improved quality of life, with chiropractic VOM care.

Remember, your pet can't ask for help but you the owners can!
