

## Pro-SealECCO Nano Novel Matrix Technology

Pro-SealCorps patent pending Nano meso inorganic Nano Novel Matrix Technology chemical bonds have billions of contact points per interaction and reaction. Notice the space between particles is filled with nano particles contacting not only the surface but to each other filling the void spaces between the particles creating a stronger denser bond.

There is a tremendous amount of surface area that is now accessible due to Pro-Seals patent pending bonding processes. These bonds are **explained in images left, below, and next page**. These billions of connections create strong chemical, mechanical, electrical, and magnetic bond in the billions of connections.

Pro-SealCorps, Pro-SealECCO, Nano Novel Matrix Technologies are a structured "bond beyond".

One nanometer is to a tennis ball  
what a tennis ball is to the Earth
