# CONDITIONS THAT AFFECT THE EYELIDS

- Your eyelashes trap allergens, dust, & debris (this protects your eyes) ⋟
- Oils, sweat, irritants, allergens, & bacteria can build up on the lid margin
- $\geqslant$ This causes eye irritation, redness, itching, burning, crusty lashes
- Oil glands, called "Meibomian Glands", open at the base of the lashes  $\geq$
- "Blinking" helps the oils to be secreted from the oil glands  $\geq$
- $\geq$ This produces the outer oily layer of your tear film (if deficient, this causes dry eye)

BLEPHARITIS is inflammation of the eyelid margins and blockage of the meibomian glands (oil glands in the lids). This can cause eye irritation, recurring eye infections/styes, loss of lashes, red/inflamed lids/eyes, and progression of dry eye disease.

#### **Staphylococcal Blepharitis**

Staph bacteria is present on the skin. If excess builds up on lids, the toxins cause redness/burning (worse in a.m.), crusting, infections.

### **Seborrheic Blepharitis**

Seborrhea is a skin condition causing dandruff on the scalp, eyebrows, eyelashes. **Anterior Blepharitis** 

Anterior blepharitis includes Staphyloccal and Seborrhoeic types. Both cause crusting of the lashes and red/inflamed lid margins.

### **Posterior Blepharitis (MGD)**

Posterior blepharitis is called Meibomian Gland Dysfunction (MGD) and affects the oil glands in the lid margin causing clogged glands similar to acne of the skin.

## Types of BLEPHARITIS

- Seborrheic
- ≻ Anterior
- $\triangleright$ Posterior
- ≻ Bacterial
- $\triangleright$ Allergic
- $\triangleright$ Demodex (mites)

## **Causes of BLEPHARITIS**

- $\triangleright$ Seborrhea
- ≻ Dermatitis
- ≻ Rosacea
- ≻ Demodex
- ≻ Bacteria
- ≻ Allergies
- ≻ Cosmetics
- fake eyelashes

# **CREEPY, CRAWLY MITES** E ON YOUR EYELIDS

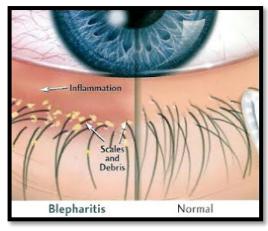

TAKE HOME RECOMMENDATION

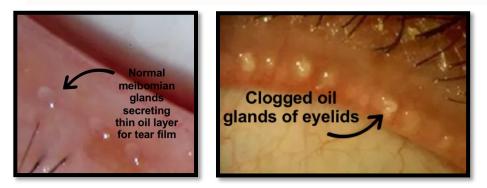

Oust<sup>™</sup> Demodex<sup>®</sup> Eyelid Cleansers

Red, irritated, itchy eyelids and the formation of cylindrical collarettes on the base of the lashes

Did you know your eyelash follicles can become infected? BLEPHARITIS = infected or inflamed lid margin or eyelash follicles

## MEIBOMIAN GLAND DYSFUNCTION (MGD) = Posterior Blepharitis

Causes: Oily skin, acne, aging, menopause, allergies, bacteria, oily based cosmetics, Rosacea

Symptoms: small bumps on lid margins, stringy mucus or crust in tear film, red eyes, burning sensation, can lead to styes and Evaporative Dry Eye

**STY**–Infected, swollen, tender gland of eyelid (like a boil on the lid margin or a bump inside the lid)

CELLULITIS - Infection can spread to the skin if not treated (or if you try to pop it). This is a dangerous infection requiring treatment.

## **OCULAR ROSACEA**

- Causes: Rosacea, heredity
- Triggers: heat exposure, hormone changes, stress, caffeine, spicy foods, cosmetics, aging
- Symptoms: Blood vessels in the skin dilate, oil glands become *inflamed* & *clogged*, pores become enlarged & bumpy, eyelid margins & the white of the eye becomes red, irritated, & hot

VIVIIN

- \* Acne Rosacea affects the face, dilated vessels, red cheeks, may mimic acne
- Rhynophyma enlarged & bumpy nose
- Ocular Rosacea dilated vessels at lid margins, blepharitis, MGD, red eyes, allergies, dry eyes, Ocular rosacea is inflammation that infections causes redness, burning and itching

of the eyes. It often develops in people who have rosacea, a chronic skin condition that affects the face.
