HOW TO USE CROCLITE & WASH

Always ensure you clean your hands before applying either product to the skin

CROCWASH

CrocWash is formulated to clean freshly tattoo'd skin

- Apply CrocWash gently to the tattoo'd area. DO NOT RUB INTO THE SKIN, a thin layer is all that is required.
- Once CrocWash is applied, rinse off with warm water and PAT DRY with a disposable single use kitchen towel. DO NOT RUB DRY.

CROCLITE

CrocLite rapid repair cream quickly cools, sooths and heals fresh tattoos. It is formulated to spread easily and gently across freshly tattoo'd skin

- Use sparingly, as a little goes a long way. A thin layer 2/3 times daily should be more than sufficient.
- It absorbs into the skin in a few minutes and creates a bacteriostatic barrier

TATTOO AFTERCARE ADVICE

TATTOO AFTERCARE ADVICE

CONGRATS!

You have just received a new tattoo from Phoenix Tattoo. In order for your new tattoo to heal in the best possible manner, we recommend that you only follow these instructions;

CLING FILM

Your artist took care to cover your new tattoo for a good reason, as pretty as your tattoo is, it is still an open wound and a breeding ground for bacteria and infection. Leave the cling film alone for a minimum of two hours.

WASHING AND TREATMENT

After you remove your cling film, you're going to need to wash your tattoo using luke-warm water and CrocWash, to remove any excess ink and blood. Alternatively, a mild, non-scented soap, something like Simple or Sanex, can be used.

DO NOT use a wash cloth or any other abrasive, a clean hand is best.

See on the reverse of this leaflet the care instructions for both CrocWash and CrocLite.

Use CrocLite very sparingly, a little goes a long way. Apply 2/3 times per day, remember your tattoo also needs air circulation around it.

SCABBING AND PEELING

After a few days you will notice that the skin around the tattoo will start to peel and flake and perhaps even scab. This is perfectly normal and part of the healing process. DO NOT SCRATCH, PICK OR PEEL AT YOUR NEW TATTOO!

WASHING

Yes, you can (and should) shower immediately after a new tattoo, it is okay to get it wet. However, do not submerge it underwater for the first 2-3 weeks. We recommend short showers for the first week. Bath, hot tubs and pools can cause serious damage to your new tattoo and can also lead to potential infections.

JEWELLERY

DO NOT let jewellery come into contact with the tattoo'd area until it is fully healed. This can irritate the area, slow the healing process, potentially cause infection and cause damage to the tattoo

THE SUN

DO NOT sun bathe or use sun beds for up to 6 weeks after your tattoo was done. Afterwards, you will ALWAYS need to protect it from the sun as the UVrays can fade a tattoo very quickly. Protect your tattoo with a minimum of SPF 30.

Following these steps will keep your tattoo looking bold and vibrant for many years to come. Please do not listen to friends, family, co-workers etc on how to care for your new tattoo, our artists are experts and their advice should be listened to.

FREE OF CHARGE RETOUCHES ON YOUR TATTOO

CrocLite is natures finest tattoo aftercare. We not only use this product during the tattoo process but we also recommend it for healing because we know how this product range heals and protects your skin.

Because of this **WE ONLY RECOMMEND THIS PRODUCT FOR AFTERCARE**.

In our experience we have seen many tattoos not heal well because of bad aftercare ... people use a range of lotions and potions on their skin because the friend of their Great Aunt, who's never had a tattoo recommends something! We know about inks and colours and how the skin heals, please take our advice.

Therefore, we are not responsible for a badly healed tattoo because you have not followed our advice.

WE ARE NOT ABLE TO OFFER FREE RETOUCHES IF YOU CHOOSE ANY OTHER AFTERCARE PRODUCTS THAN THOSE PRESCRIBED BY THIS STUDIO
