

PROJECT EXAMPLES

HYDROGEOLOGIC ASSESSMENTS

GeoPro has completed Level I and II Hydrogeologic Assessments pursuant to Critical Recharge Area regulations. The Assessments include characterization of CARAs, groundwater and springs evaluation and historic water quality uses. Our Assessments have included properties along the Columbia, Cowlitz and Lewis Rivers.

GPS MAPPING and DRONE IMAGING

GeoPro has the capability to provide accurate mapping of sample locations through our GPS and associated software. During the widening of Interstate 84 under the supervision of the Oregon Department of Transportation, GeoPro selected petroleum contaminated soil locations based on accurate mapping. Our drone provides additional viewing perspectives when locations have difficult access on land.

PHASE I and II ESA

GeoPro has completed Phase I and II Environmental Site Assessments throughout the Pacific Northwest for residential, commercial, and industrial properties following ASTM Standards. Our ESA's include visual inspections and historical uses. GeoPro manages cleanup through disposal of contaminated materials, soil, and groundwater.

SITE CHARACTERIZATION

GeoPro has completed site characterizations of soil and groundwater at contaminated properties through regulations and policies of government agencies such as Oregon Department of Environmental Quality and Washington Department of Ecology.
