Rectal Swab (Pre-Prostate Biopsy)
Specimen Collection

Preparation:

1. Clean your hands with soap and water
2. Remove the screw cap from the tube containing media and set it aside
3. Remove swab from package, which will be used to collect the sample

Collection:

1. Carefully insert the swab 1-1.5inches into anus
2. Gently rotate the swab for 10 seconds
3. Immediately place the swab into the transport tube
4. Carefully break the swab shaft against the side of the tube
5. Tightly screw on the cap.

Shipping:

1. Place patient sticker on tube
2. Ensure date and time of collection are also noted on the tube
3. Fill out paper requisition form or place online order
4. Ship specimen to Mokan Labs via lab provided, pre-paid envelope

If you have questions, please call your local representative or the Mokan Labs team at (913) 624 - 9005.
