

REMEMBER: EVERYONE HEALS DIFFERENTLY... KEEP UP WITH YOUR AFTERCARE!

Piercings can take several weeks to fully heal. Book your recommended follow up appointment and we will check on your piercing, advise you on bar changes and inform you of any further care that may be required.

Look after your piercing! It will heal, look and feel great in no time!

Please make sure to book your follow up appointment to ensure your piercing heals perfectly. Any questions, queries or concerns. Please contact us.

BODY ART

WITH OVER 22 YEARS EXPERIENCE

"Had a my tragus pierced here the other day.
Everyone was so friendly, professional and knowledgeable.
I just couldn't fault them, can highly recommend."

Carina Davies

"So pleased with my new piercings. I came in for a scaffold
piercing the other week as I had it done elsewhere and
it wasn't done very well at all, to say the least.

I popped in to see Rob and he took the time to fix this for me.
An amazing job! Would never go anywhere else."

AFTERCARE

TO BOOK YOUR FOLLOW UP
APPOINTMENT CALL 01702 343 603

AFTERCARE:

1. RINSE: at least once a day in the shower. Try not to get your hair tangled around your piercing.

2. DAY: the area around your piercing, with kitchen paper only. Tissue, toilet paper or cotton wool will disintegrate and irritate your piercing.

3. SPRAY: your piercing only once it is completely dry with our aftercare spray, at least 6 times a day. This will speed up your healing process and prevent infection.

If you find your piercing is still dirty after showering, then is it advisable to wipe around the area with a cotton bud once a day only.

TROUBLE SHOOTING:

What if I notice a bump?

Most bumps are common during the healing process, it only takes one knock etc., to cause a reaction. Good news, we have the expertise to fix them!

What if my piercing becomes infected?

At Studio Nine we only use premium medical grade jewellery so an infection is highly unlikely to occur unless the piercing has been touched with unclean hands, or hasn't been cleaned regularly or enough during the healing period.

Signs of infection, what to look out for:

- A yellow/green substance with an odour
- Redness and soreness around your piercing

Don't fear. Don't remove your piercing, this can cause the hole to close up and trap the infection inside. Please pop in, or **contact us** so we can give you the best advice.

JEWELLERY LENGTH:

6mm ☐ 7mm ☐ 8mm ☐ 9mm ☐

CHECK UP APPOINTMENT DUE IN:

3-4 Weeks ☐ 5-6 Weeks ☐
7-8 Weeks ☐ 9-10 Weeks ☐
10-14 Weeks ☐ 16 Weeks ☐
Other: _____

ADDITIONAL NOTES:

Do you suffer from headaches or migraines?

Piercing the **Daith** can have more than just cosmetic benefits, it can also be used to treat migraines, headaches and other such pains.

Piercing the Daith stimulates the acupuncture point (vagus nerve). This enables a feeling of relief, by releasing the pressure in your ear which can be the cause of your pains.

This procedure has had a 98% success rate due to the expertise of our piercer Rob, who is a specialist in this alternative treatment. In the long run you would benefit from both sides being pierced, to aim towards getting rid of your pain completely.

This treatment is made up of three stages. Firstly the piercing, which is followed by two jewellery changes as the piercing heals and requires a larger bar to ensure the pressure on the vagus nerve that relieves the pain, is sustained.
