BRAIN STRAIN

Brain Strain

Brain Strain is an indica dominant hybrid strain created through a cross of the powerful [Sour Diesel](#) X [OG Kush](#) strains. The Brain Strain high has an immediate uplifting effect that instantly launches your mood into the clouds and gives you a sense of motivated energy that's difficult to stifle. As your head high builds, a slight body buzz will creep over you that doesn't limit your movement or functionality. Rather, it relaxes your entire body and eases away any pains you may be experiencing and gives you a pretty heavy case of the munchies. Because of these effects and its insanely high 22-28% average THC level, this bud has a classic [OG](#) taste with flavors of sweet lemon and earthy diesel accented by a slight pungency that's still sweet. The aroma is very similar, although it has a very lemony diesel overtone that becomes stronger as you continue to smoke. Brain Strain buds have super dense and heavy spade-shaped nugs with dusty green coloration and patches of light minty green on the body and leaves. Each nug is dusted with a frosty coating of milky crystal trichomes and a spattering of fiery orange hairs.

Brain Strain helps with:

- [Appetite](#)
- [Chronic Fatigue](#)
- [Mood Swings](#)
- [Stress](#)
