MOISTURE BLOCKER is the *Innovative Solution*

- ⇒ Reacts with loose calcium and lime in concrete to form a “glass barrier.”
- ⇒ NOT a surface sealant- it IS an internal stabilizer
- ⇒ Permanently prevents water damage and contamination
- ⇒ Does not affect surface texture
- ⇒ Blocks moisture vapor transmission, protecting coatings from bond failures
- ⇒ Non-flammable, non-toxic, odorless and safe to use

BEFORE:
Water penetrates untreated concrete

AFTER:
Moisture Blocker penetrates the surface and forms a “glass barrier.”
Moisture Blocker fills voids and canals within the concrete substrate, making it impermeable. The surface remains bondable.
