CRAFTSMANSHIP AT ITS FINEST

Structural Welder – AWS D1.1

About the role

We are adding structural welders capable of working to AWS D1.1 standard on skids, supports, platforms, and structural steel for industrial projects across the country.

Key responsibilities

- Perform SMAW / FCAW / GMAW welding on structural members to AWS D1.1
- Weld and fit platforms, pipe supports, racks, and structural components per drawings
- Fit and tack assemblies to maintain alignment, tolerances, and weld access
- Perform grinding, cutting, and basic fabrication prep work
- Support both shop fabrication and field installation as project needs shift

Requirements

- 4+ years structural welding experience in industrial or fabrication environments
- Ability to pass a D1.1 weld test (positions and process defined during hiring)
- Ability to read fabrication drawings and weld symbols
- Comfortable working at heights and in varying weather conditions
- Own appropriate PPE and basic welding-related hand tools
- Willing and able to travel nationwide and work extended hours when required

What we offer

- Competitive hourly pay (based on test results and experience)
- Variety of work: shop builds and field installation
- Opportunity to grow with a company focused on quality and craftsmanship
