Elena tetraploid perennial ryegrass is a medium maturing variety which has shown superior forage yield potential, excellent forage quality and longer persistence in state trials throughout the United States.

With strong spring and fall forage production plus fast recovery after cutting or grazing, Elena is the ideal component for horse, dairy or beef pasture mixes. Rapid germination and excellent seedling vigor makes this variety perfect for pasture renovation as well. Elena also has great rust and leaf disease resistance which helps maintain palatability and digestibility for improved animal performance.

When all of these varietal characteristics are added up, Elena is without a doubt the best choice for livestock and dairy producers looking for increased weight gains and milk production.
