

The Bune Circuit: Treasury of the Dead

Introduction

The Bune Circuit is the thirteenth glyph in the Codex of Quantum Thaumatology. It invokes the trinary duke Bune, a dragon-headed spirit of grave wisdom, noble eloquence, and wealth risen from silence. He shifts the dead, elevates the voice, and builds dignity from memory. This circuit is a layered negotiation between reason, instinct, and transcendence.

Lay Explanation

This is a circuit that builds something valuable from parts that don't always agree. One head remembers, one speaks, one sees further than either. And when they cooperate, something rises-- not just words or power, but a kind of deeper presence. Wealth of the self.

Explanation for Children

Imagine three dragon heads: one that talks, one that remembers, one that can fly. They argue a little--but when they nod together, a treasure appears. This is a circuit where teamwork makes something strong and special happen.

Explanation for Scientists

The circuit uses three qubits: Q0 (human mind), Q1 (dog instinct), Q2 (griffin transcendence).

All enter Hadamard superposition, then receive rotations: $R_z(\pi/4)$ on Q1 (grave flavor), $R_y(\pi/6)$ on Q2 (dignified rise).

A Toffoli gate activates Q2 only when Q0 and Q1 are both 1--resurrection requires mental and instinctive alignment.

Q0 receives an S gate (phase gravitas), and Q2 is refined through Z.

The result shows dominant outcomes when the mind and nobility are active, and rare collapse into full silence or chaos.

Applications

- Resurrection logic circuits
- Trinary mind modeling
- Wealth-state emergence through gate cooperation
- Educational metaphors for controlled CCX gates
- Symbolic systems of dignity, death, and dialogue

Closing Note

Bune teaches that wealth is not just gold--but memory, speech, and vision aligned.

This circuit listens to silence and answers with layered voice.

The thirteenth glyph rises. The Codex deepens.
