

AdrenaPlex

Your Back-Up Energy Source!

When your adrenal glands are affected by sustained, long-term stress, your muscle protein may break down and your blood sugar can become unstable, causing your immune system to suffer. These symptoms are often described with “chronic fatigue” and/or “diabetes.” Further, adrenal health is a key component of the hypothalamic-pituitary-adrenal axis, which controls reactions to stress and regulates many bodily processes, including digestion, the immune system, mood and emotions, sexuality and energy storage and expenditure.

When Systems Go Down, It’s Time to Call in AdrenaPlex!
