

Our Story

Mission statement:

We will increase the quality of life for all people by drastically reducing instances of sickness and disease. We will inhibit and even prevent the spread of harmful bacteria and viruses from human to human by killing germs before they spread. We will provide each person with the most basic healthcare tools necessary to make a noticeable difference in their homes, environments and surroundings.

PureWorks is a company based on technology that protects people. Our tag line “Protected by PureWorks” says it all. Our efforts are focused on enhancing and contributing to the quality of life and to the human condition. Thus we believe that PureWorks technology has 8 Billion applications...A use for every human being!

PureWorks technology was invented by Dr. Edward Walker. We obtained our patent due to our product unique form, functions and features.

In 2002 we began looking for solutions to one of the most common concerns in healthcare. How to sanitize the skin and protect people from the harmful bacteria and viruses that exist where ever humans are and not subject the person using them to the drastic and harmful effects of soaps and bacteria killers namely alcohol, antibiotics and pesticides.

Uses of alcohol and antibiotics are rampant and have been the most common form of personal protection available. For decades anyone who wanted to effectively kill bacteria and viruses turned to alcohol and other harmful chemicals for relief. Unfortunately the relief from bacteria and viruses came at a cost. Alcohol and the others have lasting and drastic

effect on the skin. Alcohol is a flammable solvent that will dry and crack the skin, de-fat your fingers and burn in any crack or cut.

After a long and unsuccessful search for the right product we determined that what we sought for did not exist. That's when we started getting serious...

Our lengthy search took us to a thousand dead ends on the internet and eventually to the chemistry department of a local University. That is where we found Dr. Edward Walker, a leading expert in the field of quaternary ammonium compounds...germ killers. Dr. Walker has a long and varied expertise in chemistry and he was just what we needed. Once we had the expertise we went to work developing a product that had a greater spectrum of kill than the others, was gentle and actually helped and healed the skin, and as a bonus a product that had a high degree of persistence. Persistence is the ability of our product to stick to your skin and kill germs for nearly four hours without reapplying. Those are tall orders and no one has been able to do it until now.

Now we have the products and are ready to revolutionize the industry. Our task now is to get this product into the hands of everyone with skin.

Because nearly all disease is caused by germs that are spread from hand to mouth, nose, eyes etc. You know the story all too well. When one friend or family member gets sick so does the household, office, school, nursery, church, etc. How do we stop it? To stop the spread of harmful germs, bacteria, viruses, etc. we must make the hands a killing field and stop the transfer of germs from one person to the next by way of the countertop, telephone, doorknob, banister, elevator button, car seat, water fountain, vending machine, keyboard, etc. That task may be impossible, certainly daunting. Regardless of the size of task we now have the technology to do it.

It all begins here. We invite you to work with us and accomplish our goal. Start protecting you and your family today. It's possible with PureWorks.
